## SC-401 Test Guide Online & SC-401 Exam Testking

Are you in the condition that you want to make progress but you don't know how to and you are a little lost in the preparation. Perhaps you need help with our SC-401 preparation materials. A good product, the most important thing is to seize the user's most concerned part. We can tell you that 99% of those who use our SC-401 Exam Questions have already got the certificates they want and they all lead a better life now. Just buy our SC-401 training braindumps, then you will succeed as well!

## Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q74-Q79):

### NEW QUESTION # 74

You have a Microsoft 365 E5 subscription that uses Microsoft Purview.

You are creating an exact data match (EDM) classifier named EDM1.

For EDM1, you upload a schema file that contains the fields shown in the following table.

Column name	Match mode
PP	EU Passport Number
Name	All-Full Names
DateOfBirth	Single-token
AccountNumber	Multi-token

What is the maximum number of primary elements that EDM1 can have?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:

In Microsoft Purview Exact Data Match (EDM) classifiers, a primary element is a unique, identifying field used for data matching. EDM allows up to two primary elements per schema.

From the provided table, the Match mode indicates how data is analyzed:

# PP (EU Passport Number) # Likely a primary element because it's unique.

# Name (All Full Names) # Typically not a primary element as names are common.

# DateOfBirth (Single-token) # Usually a secondary element, not unique.

# AccountNumber (Multi-token) # Can be a primary element, as it's a unique identifier.

# Since EDM supports a maximum of two primary elements, the correct answer is 2.

**NEW QUESTION # 75**

You are creating a DLP policy named Policy1 that will be applied to the locations as shown in the following exhibit.

## Choose where to apply the policy

We'll apply the policy to data that's stored in the locations you choose.

① Protecting sensitive info in on-premises repositories (SharePoint sites and file shares) is now in preview.  
Note that there are prerequisite steps needed to support this new capability. [Learn more about the prerequisites](#)

Location	Scope	
<input checked="" type="checkbox"/> Exchange email	All groups	<a href="#">Edit</a>
<input checked="" type="checkbox"/> SharePoint sites	All sites	<a href="#">Edit</a>
<input checked="" type="checkbox"/> OneDrive accounts	All users & groups	<a href="#">Edit</a>
 <input checked="" type="checkbox"/> Teams chat and channel messages	All users & groups	<a href="#">Edit</a>
<input checked="" type="checkbox"/> On-premises repositories	All repositories	<a href="#">Edit</a>
<input type="checkbox"/>  Fabric and Power BI workspaces	Turn on location to scope	

Policy1 contains an advanced data loss prevention (DLP) rule named Rule1.

Which two conditions can you use in Rule1? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Attachment's file extension is
- B. Content contains
- C. Document property is
- D. Document size equals or is greater than
- E. Content is shared from Microsoft 365

**Answer: B,E**

Explanation:

\* Content is shared from Microsoft 365

This rule will detect if one of your employees is sharing sensitive info outside of your organization.

\* Content contains

Messages or documents that contain sensitive information as defined by Microsoft Purview Data Loss Prevention (DLP) policies.

Reference:

<https://learn.microsoft.com/en-us/purview/dlp-exchange-conditions-and-actions>

### NEW QUESTION # 76

You need to meet the technical requirements for the Site1 documents.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Create a sensitivity label.	
Wait 24 hours and then turn on the policy.	
Create a sensitive info type.	
Create a retention label.	
Create an auto-labeling policy.	

### Answer:

Explanation:

Actions	Answer Area
Create a sensitivity label.	
Wait 24 hours and then turn on the policy.	
Create a sensitive info type.	<input checked="" type="checkbox"/> Create a sensitive info type.
Create a retention label.	<input checked="" type="checkbox"/> Create a retention label.
Create an auto-labeling policy.	

Explanation:

Actions	Answer Area
Wait 24 hours and then turn on the policy.	
Create a retention label.	

The goal is to automatically label documents in Site1 that contain credit card numbers. To achieve this, we need a sensitivity label with an auto-labeling policy based on a sensitive info type that detects credit card numbers.

Step 1: Create a Sensitive Info Type

# A sensitive info type is needed to detect credit card numbers in documents.

# Microsoft Purview includes built-in sensitive info types for credit card numbers, but we can also create a custom one if necessary.

Step 2: Create a Sensitivity Label

# A sensitivity label is required to classify and protect documents containing sensitive information.

# This label can apply encryption, watermarking, or access controls to credit card data.

Step 3: Create an Auto-Labeling Policy

# An auto-labeling policy ensures that the sensitivity label is applied automatically when credit card numbers are detected in Site1.

# This policy is configured to scan files and automatically apply the correct sensitivity label.

## NEW QUESTION # 77

You have a Microsoft 365 E5 subscription that contains a user named User1.

You need to ensure that all email messages that contain attachments are encrypted automatically by using Microsoft Purview Message Encryption.

What should you create?

- A. an information barrier segment
- B. a sensitivity label
- C. a data loss prevention (DLP) policy
- D. a mail flow rule

**Answer: D**

Explanation:

Defining rules for Microsoft Purview Message Encryption

One way to enable Microsoft Purview Message Encryption is for Exchange Online and Exchange Online Protection administrators to define mail flow rules. These rules determine under what conditions email messages should be encrypted. When an encryption action is set for a rule, any messages that match the rule conditions are encrypted before they're sent.

Mail flow rules are flexible, letting you combine conditions so you can meet specific security requirements in a single rule. For example, you can create a rule to encrypt all messages that contain specified keywords and are addressed to external recipients.

Microsoft Purview Message Encryption also encrypts replies from recipients of encrypted email.

## NEW QUESTION # 78

Drag and Drop Question

You have a Microsoft 365 E5 subscription that uses Microsoft Purview insider risk management and contains three users named User1, User2, and User3.

All insider risk management policies have adaptive protection enabled and the default conditions for insider risk levels configured.

The users perform the following activities, which trigger insider risk policy alerts:

- User1 performs at least one data exfiltration activity that results in a high severity risk score.
- User2 performs at least three risky user activities within seven days, that each results in a high severity risk score.
- User3 performs at least two data exfiltration activities within seven days, that each results in a high severity risk score.

Which insider risk level is assigned to each user? To answer, drag the appropriate levels to the correct users. Each level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Insider risk levels    Answer Area**

Elevated risk level	User1:	<input type="text"/>
Minor risk level	User2:	 Microsoft
Moderate risk level	User3:	<input type="text"/>

**Answer:**

Explanation:

Insider risk levels	AnswerAreaSoft
User1:	Minor risk level
User2:	Elevated risk level
User3:	Moderate risk level

Explanation:

Box 1: Minor risk level

User1 performs at least one data exfiltration activity that results in a high severity risk score.

Minor:

This is the lowest risk level, assigned to users with low-severity alerts or those with at least one high-severity exfiltration activity.

Box 2: Elevated risk level

User2 performs at least three risky user activities within seven days, that each results in a high severity risk score.

Elevated:

This is the highest risk level, assigned to users with high-severity alerts, multiple high-severity insights, or confirmed high-severity alerts.

Box 3: Moderate risk level

User3 performs at least two data exfiltration activities within seven days, that each results in a high severity risk score.

Moderate:

This level indicates a medium risk, assigned to users with medium-severity alerts or those with at least two high-severity exfiltration activities.
