- A. When you open the mapper for a request or response message in an integration, the data structures are automatically populated with the information pulled from the source and target connections.
- B. Using the connectivity agent, you can create hybrid integrations and exchange messages between applications in private or on-premises networks and OIC.
- C. OIC lookups are based on a static definition, meaning you create and populate them during design time, and cannot be changed by runtime activities.
- D. An application-driven integration can contain one or more trigger (source) connections for requests sent to OIC and one or more invoke (target) connections for requests sent from OIC.

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

OIC fundamentals:

Option A:True-lookups are static, design-time artifacts.

Option B:True-connectivity agents enable hybrid integrations.

Option D:True-the mapper auto-populates from connection schemas.

integrations or event patterns, making this invalid.
C misrepresents OIC's app-driven pattern.

- D. You cannot drag and drop an XPath function activity directly to a target node element.
