For candidates who are going to buying GES-C01 training materials online, you may pay more attention to the privacy protection. We respect the private information of you. If you choose us, we can ensure you that your personal information such as your name and email address will be protected well. Once the order finishes, your personal information will be concealed. Besides, GES-C01 Exam Materials contain both questions and answers, and it's convenient for you to have a check of answers. We have online and offline chat service for GES-C01 exam materials, if you have any questions, you can have a conversation with them.

It is not easy for you to make a decision of choosing the GES-C01 study materials from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the GES-C01 study materials from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the GES-C01 Study Materials from our company are designed by a lot of famous experts and professors in the field.

Exam Dumps GES-C01 Demo & Valid GES-C01 Exam Notes

The only use of the internet is to validate the product license for the GES-C01 practice exam software. If you are not online, you can still practice for the Snowflake GES-C01 exam questions thanks to this feature of Prep4sureGuide's GES-C01 Exam simulation software. As a result, the GES-C01 desktop-based practice test software is a particularly useful option for customers who do not constantly have access to the internet.

Snowflake SnowPro® Specialty: Gen AI Certification Exam Sample Questions (Q248-Q253):

NEW QUESTION # 248

A security architect is configuring access controls for a new custom role, 'document_processor_role', which will manage Document AI operations within a designated database 'doc_processing_db' and schema 'doc_workflow_schema'. The goal is to grant only the minimum essential database-level role required to begin working with Document AI features.

- A.
- B.
- C.
- D.
- E.

Answer: B

Explanation:

To work with Document AI, the database role must be granted to the account role. This role specifically enables creating Document AI model builds and working on document processing pipelines. Option A grants a more general Cortex user role, which is not the specific foundational role for Document AI. Option B grants access to all Cortex models, but not the foundational Document AI database role itself. Options D and E grant schema-level or warehouse-level privileges, which are also necessary but are not the database-level 'role' specifically for DocumentAI capabilities.

NEW QUESTION # 249

An ML engineer has developed a custom PyCaret classification model and wants to deploy it to Snowpark Container Services (SPCS) for inference using the Snowflake Model Registry. The model requires specific versions of pycaret, 'scipy', and 'joblib'. The engineer also wants to make the service accessible via an HTTP endpoint. Which of the following Model Registry and service creation steps are 'most appropriate' for the ML engineer? (Select all that apply.)

- A.
- B.
- C.
- D. Opt for warehouse deployment instead of SPCS, as PyCaret is not natively supported by Snowflake and managing its dependencies in SPCS would be overly complex compared to a warehouse.
- E.

Answer: A,B,C

Explanation:

Option A is correct. When bringing an unsupported model type, such as PyCaret, you must define a 'ModelContext' that refers to the serialized model file (e.g., a pickled file). Option B is incorrect. For models deployed to Snowpark Container Services, 'conda_dependencies' are, by default, obtained from 'conda-forge', not the Snowflake Anaconda channel, which is used for warehouse deployments. Therefore, relying on the Snowflake Anaconda channel for SPCS deployment is incorrect. Option C is correct. While 'conda_dependencies' can be used for SPCS (resolved from 'conda-forge'), 'pip_requirements' are often a more direct and reliable way to specify dependencies for custom or less common third-party Python packages, ensuring they are pulled directly from PyPI if not available in 'conda-forge'. The PyCaret example in the sources, while using 'conda_dependencies', represents a specific case, and for broader 'custom third-party packages', pip is a strong choice. Option D is correct. To make the deployed service accessible via an HTTP endpoint, must be set to 'True'. Additionally, 'gpu_requests = (or the appropriate number of GPUs) is essential when deploying a model to a GPU compute pool to ensure it leverages the GPU resources for inference. Option E is incorrect. Snowpark Container Services is specifically designed to ease the restrictions of warehouse deployment, allowing for the use of any packages (including PyPI) and enabling large models to run on distributed clusters of GPUs, which is ideal for this scenario.

NEW QUESTION # 250

A data operations team is attempting to scale up their Document AI automated pipeline. They are using a Snowflake Task to process a large volume of daily scanned invoices and receipts, which are stored in an internal stage 'financial_docs stage'. The current processing involves documents that are frequently around 75 MB each, and often there are batches exceeding 1,200 documents in a single day. The pipeline is failing consistently. Which of the following factors could be contributing to the failures in this Document AI automated pipeline? (Select all that apply.)

- A. The Snowflake Task is configured as a 'SERVERLESS TASK, which is not supported by Document AI.
- B. The number of documents in a single daily batch (exceeding 1,200) surpasses Document AI's processing limit per query.
- C. The account role executing the task lacks the 'SNOWFLAKCORTX USER database role, which is a prerequisite for Document AI functions.
- D. The was created without specifying 'ENCRYPTION = (TYPE = 'SNOWFLAKE SSE')'.
- E. The individual document size (75 MB) exceeds the maximum supported file size for Document AI.

Answer: A,B,D,E

Explanation:

NEW QUESTION # 251

A data analyst is working with a table containing customer feedback text and needs to perform various text analysis tasks efficiently within Snowflake. They want to summarize the reviews, determine their sentiment, and extract specific pieces of information. Which

of the following Snowflake Cortex LLM functions, when applied to a text column, will achieve the desired outcome and return the specified output type?

- A. The
 -
- B. To extract a specific answer to a question from each review, the analyst can use
 -
- C. To get a concise overview of each review, the analyst should use
 -
- D. To categorize reviews into predefined labels, the analyst should use
 -
- E. To determine the overall sentiment of each review, the analyst should use
 -

Answer: C,D

Explanation:

Option A is correct because the 'SUMMARIZE' function takes an English-language input text and returns a string containing a summary of the original text. Option B is incorrect because the 'SENTIMENT' function returns a floating-point number from -1 to 1 (inclusive) indicating the level of negative or positive sentiment, not an INTEGER. Option C is incorrect because the 'EXTRACT_ANSWER' function returns a string containing an answer to the given question, not a JSON object. Option D is correct because the 'CLASSIFY_TEXT' function classifies free-form text into categories and returns an OBJECT value (VARIANT) with a 'label' field specifying the category. 'AI_CLASSIFY' is the latest version of this function. Option E is incorrect because 'AI_AGG' aggregates a text column and returns insights across multiple rows based on a user-defined prompt, and importantly, it is not subject to context window limitations.

NEW QUESTION # 252

An analytics team needs to use various Snowflake Cortex LLM functions and wants to understand the cost implications and governance mechanisms for controlling model access and usage. The 'ACCOUNTADMIN' has restricted general LLM access using the 'CORTEX_MODELS_ALLOWLIST' parameter. The team is particularly interested in how model complexity and specific function calls impact billing and how access can be managed effectively for different user groups.

- A. Option D
- B. Option C
- C. Option E
- D. Option A
- E. Option B

Answer: B,C,D

Explanation:
