NEW QUESTION # 29

Which architectural pattern in an event-driven architecture allows direct communication between two parties without an intermediary?

- A. Event Sourcing
- B. Point-to-Point
- C. Message Queue
- D. Publish-Subscribe

Answer: B

Explanation:

References

In an event-driven architecture (EDA), several messaging patterns exist:

Point-to-Point # Enables direct communication between exactly two parties (sender and receiver) without intermediaries.

Publish-Subscribe # Multiple consumers subscribe to events; requires a broker/intermediary (like Event Mesh).

Message Queue # Relies on a queue as an intermediary between producer and consumer.

Event Sourcing # Refers to storing state changes as events, not a communication pattern.

Therefore, the only pattern allowing direct communication without an intermediary is Point-to-Point.
