Exam4PDF is the website that has been known to learn IT technology. Exam4PDF gets high praise from our customers in real test questions and answers. It is the real website that can help you to pass Microsoft AI-900 certificate. Why is Exam4PDF very popular? Because Exam4PDF has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, Exam4PDF will provide you with more and better certification training materials to satisfy your need.

Describe NLP Workloads Features on Azure (15-20%)

This domain contains the following details that you need to learn about:

- Identify Azure services & tools for Natural Language Processing Workloads – This topic is created to equip you with the ability to identify various capabilities, such as Speech service, Text Analytics service, Translator Text service, and Language Understanding service.
- Identify the features of basic NLP (Natural Language Processing) Workload Scenarios – The individuals should be able to identify various uses and features of various components, for example, keyphrase extraction, sentiment analysis, entity recognition, translation, language modeling, and speech recognition & synthesis.

The AI-900 exam is a great way to showcase your expertise in AI and Azure services, which can help you stand out from the crowd in the job market. Organizations worldwide are looking for skilled professionals who can help them leverage AI to achieve their business goals. Having an AI-900 Certification on your resume can make you a valuable asset to any organization looking to implement AI solutions.

The AI-900 exam is suitable for individuals who are looking to develop their skills and knowledge in AI and machine learning, regardless of their background or experience level. AI-900 exam is also ideal for students who are interested in pursuing a career in AI and want to gain a fundamental understanding of the technology. For professionals, the AI-900 exam can help you demonstrate your knowledge and expertise in AI, which can lead to better job opportunities and higher salaries.

Free PDF AI-900 - Fantastic New Microsoft Azure AI Fundamentals Practice Questions

Don't let outdated study materials hold you back from passing the Microsoft Azure AI Fundamentals (AI-900) certification exam. Our platform offers updated AI-900 exam dumps in three formats - PDF, web-based practice exams, and desktop practice test software - so you can study and prepare anytime, anywhere. With our reliable study materials, you can achieve your career goals and land a high-paying job in the technology industry. Don't waste your resources on outdated material - trust our platform to provide you with the actual and updated Microsoft AI-900 Practice Questions you need to succeed.

Microsoft Azure AI Fundamentals Sample Questions (Q307-Q312):

NEW QUESTION # 307

To complete the sentence, select the appropriate option in the answer area.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/innovate/best-practices/trusted-ai>

NEW QUESTION # 308

For a machine learning progress, how should you split data for training and evaluation?

- A. Use features for training and labels for evaluation.
- **B. Randomly split the data into rows for training and rows for evaluation.**
- C. Randomly split the data into columns for training and columns for evaluation.
- D. Use labels for training and features for evaluation.

Answer: B

Explanation:

Explanation

NEW QUESTION # 309

You are developing a solution that uses the Text Analytics service.

You need to identify the main talking points in a collection of documents.

Which type of natural language processing should you use?

- **A. key phrase extraction**
- B. sentiment analysis
- C. language detection
- D. entity recognition

Answer: A

Explanation:

Broad entity extraction: Identify important concepts in text, including key phrases and named entities such as people, places, and organizations. Broad entity extraction: Identify important concepts in text, including key phrases and named entities such as people, places, and organizations.

NEW QUESTION # 310

What can be used to complete a paragraph based on a sentence provided by a user?

- A. Azure Machine Learning

- B. Azure AI Vision
- C. Azure AI Language
- **D. Azure OpenAI**

Answer: D

Explanation:

The service that can complete a paragraph based on a sentence is Azure OpenAI. According to Microsoft Learn's AI-900 study guide, Azure OpenAI provides access to advanced language models like GPT-3.5 and GPT-4, which can generate and continue text, summarize, or create content based on prompts. The task described-text completion-is precisely what GPT models are designed for.

Azure AI Language performs language understanding and analysis (sentiment, key phrases, translation), Azure Machine Learning trains custom models, and Azure AI Vision handles images. Hence, Azure OpenAI is the correct choice.

NEW QUESTION # 311

You need to determine the location of cars in an image so that you can estimate the distance between the cars. Which type of computer vision should you use?

- A. optical character recognition (OCR)
- **B. object detection**
- C. image classification
- D. face detection

Answer: B

Explanation:

Section: Describe features of computer vision workloads on Azure

Explanation:

Object detection is similar to tagging, but the API returns the bounding box coordinates (in pixels) for each object found. For example, if an image contains a dog, cat and person, the Detect operation will list those objects together with their coordinates in the image. You can use this functionality to process the relationships between the objects in an image. It also lets you determine whether there are multiple instances of the same tag in an image.

The Detect API applies tags based on the objects or living things identified in the image. There is currently no formal relationship between the tagging taxonomy and the object detection taxonomy. At a conceptual level, the Detect API only finds objects and living things, while the Tag API can also include contextual terms like "indoor", which can't be localized with bounding boxes.
