

NCP-EUC New Braindumps Ebook - New Soft NCP-EUC Simulations

What's more, part of that Pass4crum NCP-EUC dumps now are free: <https://drive.google.com/open?id=19ajPiE9mhUwwfHKgTqwNiREAbxPvzgJQ>

Pass4crum deeply believe that our latest NCP-EUC exam torrent will be very useful for you to strength your ability, pass your NCP-EUC exam and get your certification. Our NCP-EUC study materials with high quality and high pass rate in order to help you get out of your harassment. If you do not have access to internet most of the time, if you need to go somewhere is in an offline state but you want to learn for your NCP-EUC Exam. Our website will help you solve your problem with the help of our excellent NCP-EUC exam questions.

The Nutanix NCP-EUC exam consists of 60 multiple-choice and multiple-select questions that need to be completed within 90 minutes. NCP-EUC exam is proctored, and candidates can take it online or at a testing center. You will need to get a minimum score of 300 out of 500 to pass the exam. NCP-EUC exam fee is \$199, and you can take it as many times as you need until you pass. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is valid for three years, after which you will need to renew it by taking a recertification exam.

The NCP-EUC certification exam covers a wide range of topics such as installation, configuration, and management of Nutanix VDI solutions, as well as the integration of third-party products and services. Candidates will be tested on their ability to design and deploy virtual desktop infrastructure solutions, troubleshoot issues, and optimize performance to ensure efficient and cost-effective VDI deployments.

Nutanix NCP-EUC (Nutanix Certified Professional - End-User Computing) Exam is a certification program designed to test the

skills and knowledge of IT professionals in delivering end-user computing solutions using the Nutanix Enterprise Cloud platform. NCP-EUC exam is intended for professionals who work with desktop and application virtualization, user profile management, and identity management technologies. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification validates the candidate's ability to design, deploy, and manage Nutanix EUC solutions effectively.

Valid NCP-EUC Exam Braindumps Prep Materials: Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam - Pass4cram

When preparing for the test NCP-EUC certification, most clients choose our products because our NCP-EUC learning file enjoys high reputation and boost high passing rate. Our products are the masterpiece of our company and designed especially for the certification. Our NCP-EUC latest study question has gone through strict analysis and verification by the industry experts and senior published authors. The clients trust our products and treat our products as the first choice. So the total amounts of the clients and the sales volume of our NCP-EUC learning file is constantly increasing.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

An AHV-based virtual desktop user is reporting poor performance in a newly-provisioned VDI environment.

After investigating, an administrator discovers this VM configuration:

UEFI BIOS1

2 vCPU

8GB RAM

Windows 11

SCSI disk controller

Thin provisioned storage

VLAN tagged network

How should the administrator best improve performance?

- A. Use qemu-img to expand the vDisk.
- **B. Configure at least three vCPUs.**²
- C. Connect the vNIC to the Native VLAN.
- D. Add 2GB RAM to the VM.

Answer: B

Explanation:

According to Nutanix and Microsoft best practices for Windows 11 on AHV, the operating system has significantly higher CPU overhead compared to previous versions due to mandatory security features like Virtualization-Based Security (VBS) and Hypervisor-Protected Code Integrity (HVCI).

While the minimum requirement for Windows 11 is 2 vCPUs, this configuration is often insufficient for an acceptable user experience in a VDI environment where users are running concurrent applications.

Performance analysis indicates that 2 vCPUs results in high CPU Ready time and sluggishness. The recommended configuration to resolve these performance bottlenecks is to increase the CPU allocation to at least 3 vCPUs (typically 4 vCPUs is the standard "sweet spot" for Windows 11 VDI), ensuring enough compute cycles are available for both the OS overhead and user workloads.³

NEW QUESTION # 38

A previous administrator provisioned all of the virtual desktops in a virtual desktop Nutanix cluster using the following specifications:

* 6 vCPU

* 8 GB Memory

* 300 GB HDD

How can the current administrator best prepare next fiscal year's budget using Prism Central?

- A. Review the most recent in Audits.
- B. Execute a Calm blueprint to add additional desktops.
- C. Review most recent in Tasks.

- **D. Execute Capacity Runway scenario.**

Answer: D

Explanation:

In Nutanix Prism Central, the Capacity Runway scenario provides details on the available capacity for the next 12 months based on the current usage pattern. This feature can help the administrator to plan and prepare the budget for the next fiscal year. The administrator can use this information to decide whether more resources need to be added to the Nutanix cluster or if the existing resources are sufficient.

<https://www.nutanix.com/products/prism/prism-central>

Prism Central planning tools can help you estimate the capacity runway of your cluster by considering the storage, CPU, and memory capacity. However, you need to have at least 21 days of data from a cluster to calculate the baseline runway estimates⁴.

NEW QUESTION # 39

An administrator is asked to configure AHV settings for an EUC environment.

What is the optimal configuration?

- A. Memory reservation at 50% and local swap files
- B. CPU and Memory shares set to high
- **C. High performance power management**
- D. Memory overcommit set to disabled

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix AHV Best Practices for Virtual Desktop Infrastructure (VDI):

* Power Management: The most critical "optimal" configuration for latency-sensitive EUC workloads is to ensure the host power management policy is set to High Performance. This prevents the CPU from entering power-saving states (C-states/P-states) which can introduce latency during user interaction.

* Memory Configuration: While Nutanix AHV typically disables memory overcommit by default (or does not use it in the same way as other hypervisors for VDI), the active configuration step required by an administrator to guarantee optimal performance is the Power Management setting. Memory reservation should generally be 100% (not 50%) to avoid swapping, and CPU/Memory shares are usually left at default unless there is specific contention, but Power Management is the baseline requirement for EUC optimization.

* Why not D? While memory overcommit should be disabled for VDI, in many AHV versions this is the default behavior or inherent architecture. "High performance power management" represents the specific tuning parameter that administrators must validate or configure (often in the BIOS or via AHV command) to ensure the environment is "optimized" for desktop workloads.

NEW QUESTION # 40

Due to software licensing, a company has a requirement to only deploy certain apps to different groups of users while also having a single desktop image for all users. An administrator wants a way to do this without installing apps in the image and hiding them based on user groups or having double-hop sessions.

Which option should the administrator use to deliver user group specific apps?

- **A. Application layering**
- B. Application publishing
- C. Application masking
- D. Application installs on-demand

Answer: A

Explanation:

To meet the requirement of a single desktop image without "installing apps in the image and hiding them" (which excludes Application Masking, Option D), and avoiding "double-hop sessions" (which excludes Application Publishing, Option B), the correct solution is Application Layering.

Application Layering (such as Citrix App Layering or similar technologies supported on Nutanix) allows applications to be packaged into separate virtual disks (layers). These layers are attached to the OS at runtime based on user identity or group membership. This keeps the base image clean and generic while delivering specific apps to specific users, satisfying all conditions in the scenario.

NEW QUESTION # 41

Which solution can the administrator implement to resolve the issue?

- A. Increase the number of snapshots to allow for the task to fetch a limited number of snapshots.
- B. Reduce the number of snapshots to allow for the task to fetch a limited number of snapshots.
- C. Downgrade the Nutanix AHV Plugin for Citrix to version 2.6 or below.
- D. Uninstall the Nutanix AHV Plugin for Citrix.

Answer: B

Explanation:

This is because having too many snapshots can cause serialization or deserialization errors when using the JSON serializer5 <https://next.nutanix.com/product-updates/ahv-plugin-for-citrix-director-1-1-4-0-released-39682>

NEW QUESTION # 42

• • • • •

The PDF version of our NCP-EUC learning guide is convenient for reading and supports the printing of our study materials. If client uses the PDF version of NCP-EUC exam questions, they can download the demos freely. If clients feel good after trying out our demos they will choose the full version of the test bank to learn our NCP-EUC Study Materials. And the PDF version can be printed into paper documents and convenient for the client to take notes.
