N10-009 Dumps Demo Questions:

Demo Question: 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.
Solution: From the Office 365 admin center, you assign User2 the Security Reader role.
From the Exchange admin center, you assign User2 the Help Desk role.
Does this meet the goal?

- A. Yes
- B. NO

Answer: B

If you are preparing for the CompTIA N10-009 exam dumps our N10-009 Questions help you to get high scores in your CompTIA N10-009 exam. Test your knowledge of the CompTIA N10-009 Exam Dumps with Lead1Pass CompTIA N10-009 practice questions. The software is designed to help with CompTIA N10-009 exam dumps preparation.

We provide the best privacy protection to the client and all the information of our client to buy our N10-009 test prep is strictly kept secret. All our client come from the whole world and the people in some countries attach high importance to the privacy protection. Even some people worry about that we will sell their information to the third side and cause unknown or serious consequences. The aim of our service is to provide the N10-009 Exam Torrent to the client and help them pass the exam and not to disclose their privacy to others and seek illegal interests.

N10-009 pass dumps & PassGuide N10-009 exam & N10-009 guide

If you are new to our website and our N10-009 study materials, you may feel doubt our quality. It is ok that you can free download the demos of the N10-009 exam questions. You can feel the characteristics of our N10-009 practice guide and whether they are suitable for you from the trial. After your payment, we'll send you a connection of our N10-009 Practice Engine in 5 to 10 minutes and you can download immediately without wasting your valuable time.

CompTIA Network+ Certification Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

A technician is troubleshooting a user's laptop that is unable to connect to a corporate server.

The technician thinks the issue pertains to routing. Which of the following commands should the technician use to identify the issue?

- A. dig
- B. tcpdump
- C. arp
- **D. tracert**

Answer: D

Explanation:

The tracert (Traceroute) command is used to determine the path packets take from the source to the destination. It helps in identifying routing issues by showing each hop the packets pass through, along with the time taken for each hop. This command can pinpoint where the connection is failing or experiencing delays, making it an essential tool for troubleshooting routing issues.

NEW QUESTION # 29

Which of the following would most likely be used as a replacement for a traditional VPN for remote users?

- A. Site-to-site VPN
- B. Reverse proxy
- C. SD-WAN
- **D. SASE**

Answer: D

Explanation:

A modern replacement for traditional remote-access VPN for users is SASE (Secure Access Service Edge).

Network+ highlights trends in remote connectivity and security where organizations move away from backhauling all user traffic through a VPN concentrator and instead use cloud-delivered security and access controls closer to the user. SASE combines networking and security capabilities—commonly including ZTNA (Zero Trust Network Access), secure web gateway (SWG), CASB, firewall-as-a-service (FWaaS), and centralized policy enforcement—so remote users can securely access applications without relying on a classic "connect to the corporate network first" VPN model.

SD-WAN primarily optimizes connectivity between sites and to cloud services, often for branch networks; it's not typically the direct replacement for remote user VPN access. Site-to-site VPN connects networks (locations) and is not intended for individual remote users. A reverse proxy can publish specific internal web applications externally and provide some security functions, but it does not replace VPN broadly for remote user access to multiple internal resources the way SASE/Zero Trust access solutions do. Therefore, SASE is the best answer as the likely replacement for traditional remote-access VPN.

NEW QUESTION # 30

A network technician installs a new 19.7ft (6m), Cat 6, UTP cable for the connection between a server and a switch.

Communication to the server is degraded, and the NIC statistics show dropped packets and CRC errors. Which of the following cables would the technician most likely use instead to reduce the errors?

- A. Coaxial cable
- B. Plenum cable
- **C. STP cable**
- D. 9.8ft (3m) cable

Answer: C

Explanation:

The errors described - dropped packets and CRC (Cyclic Redundancy Check) errors - often indicate electromagnetic interference (EMI) on unshielded twisted pair (UTP) cabling. The correct replacement is STP (Shielded Twisted Pair), which has shielding that protects signals from external interference, ensuring better reliability in noisy environments such as data centers or near heavy electrical equipment.

A). Coaxial is not used for modern Ethernet server-switch links.

B). Shorter UTP cable does not solve EMI issues.

C). Plenum cable refers to cable jacket type for fire safety, not electrical shielding.

STP cabling reduces interference and ensures reliable gigabit+ Ethernet connections between servers and switches.

References (CompTIA Network+ N10-009):

Domain: Network Troubleshooting - Cabling issues, UTP vs. STP, EMI.

NEW QUESTION # 31

A network administrator needs to set up a multicast network for audio and video broadcasting.

Which of the following networks would be the most appropriate for this application?

- A. 172.16.0.0/24
- B. 224.0.0.0/24
- C. 240.0.0.0/24
- D. 192.168.0.0/24

Answer: B

Explanation:

Understanding Multicast:

Multicast IP Address Range: The multicast address range is from 224.0.0.0 to 239.255.255.255, designated for multicast traffic.

Multicast Applications:

Use Case: Multicast is used for one-to-many or many-to-many communication, suitable for applications like audio and video broadcasting where the same data is sent to multiple recipients simultaneously.

Appropriate Network Selection:

224.0.0.0/24 Network: This range is reserved for multicast addresses, making it the appropriate choice for setting up a multicast network.

NEW QUESTION # 32

Which of the following can also provide a security feature when implemented?

- A. NAT
- B. FHRP
- C. BGP
- D. EIGRP

Answer: A

Explanation:

Explanation: NAT (Network Address Translation) helps hide internal IP addresses from external networks, adding a layer of security by preventing direct access to internal systems from the outside.

NEW QUESTION # 33

.....

Our N10-009 study materials have a professional attitude at the very beginning of its creation. The series of N10-009 measures we have taken is also to allow you to have the most professional products and the most professional services. I believe that in addition to our N10-009 Exam Questions, you have also used a variety of products. We believe if you compare our N10-009 training guide with the others, you will choose ours at once.
