

JN0-105 Valid Practice Materials & JN0-105 Certification Sample Questions

Is Certs4Future the Best Choice for JN0-105 Exam Preparation?

Introduction to the JN0-105 Exam

When you're prepping for a network certification like Juniper's JN0-105 (also known as the Juniper Networks Certified Associate - Junos), you don't want to gamble on low-quality resources. This is your ticket to getting recognized as a capable network professional, so preparation is key.

What is the JN0-105 Certification?

The [JN0-105 Exam Practice Test](#) is a foundational-level certification offered by Juniper Networks. It tests your knowledge of networking fundamentals, Junos OS basics, user interfaces, configuration basics, and routing fundamentals. It's basically your entry pass into Juniper's world of enterprise-level networking technologies.

Why is JN0-105 Valuable in IT Networking?

This cert holds serious weight in the IT world. It not only validates your skills but also sets you apart from the crowd. Employers recognize it as a sign of both technical aptitude and a serious attitude toward career development in networking.

If you are having the same challenging problem, don't worry; Juniper is here to help. Our direct and dependable Juniper Treasury with Junos, Associate (JNCIA-Junos) Exam Questions in three formats will surely help you pass the Juniper Treasury with JN0-105 certification exam. Because this is a defining moment in your career, do not undervalue the importance of our Treasury with Junos, Associate (JNCIA-Junos) (JN0-105) exam dumps. Profit from the opportunity to get these top-notch exam questions for the JN0-105 certification test.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 2	<ul style="list-style-type: none">User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 3	<ul style="list-style-type: none">Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.

Juniper JN0-105 Exam Questions: Your Key to Exam Success

PrepAwayPDF examines it regularly for new updates so that you always get new Junos, Associate (JNCIA-Junos) (JN0-105) practice questions. Since it is a printable format, you can do a paper study. The Junos, Associate (JNCIA-Junos) (JN0-105) PDF Dumps document is accessible from every location at any time. This Junos, Associate (JNCIA-Junos) (JN0-105) software has a simple-to-use interface. By using the Junos, Associate (JNCIA-Junos) (JN0-105) practice exam software, you can evaluate your mistakes at the end of every take and overcome them. Our software helps you to get familiar with the format of the original Junos, Associate (JNCIA-Junos) (JN0-105) test.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q88-Q93):

NEW QUESTION # 88

You want to redeploy a Junos device by clearing the existing configuration and resetting it to factory defaults. In this scenario, which command would help to accomplish this task?

- A. request system storage cleanup
- B. request system zeroize media
- C. show system storage
- D. request system storage cleanup dry-run

Answer: B

Explanation:

The request system zeroize media command on a Junos device securely erases all data, including configuration and log files, and resets the device to its factory default settings. This command is used when redeploying a device to ensure no residual data remains from its previous deployment. It's a comprehensive and secure way to clear all configurations and data, making the device as if it were new. The other commands listed do not perform a full reset to factory defaults; for example, show system storage displays storage information, and request system storage cleanup offers to delete unnecessary files without resetting the device to factory settings.

NEW QUESTION # 89

Which two statements are correct regarding Layer 2 network switches? (Choose two.)

- A. Switches are susceptible to traffic loops.
- B. Switches do not learn MAC addresses.
- C. Switches create a single collision domain.
- D. Switches flood broadcast traffic.

Answer: A,D

Explanation:

Layer 2 network switches are crucial components in local area networks (LANs), providing multiple functions for data packet forwarding and network segmentation. One inherent characteristic of switches is their susceptibility to traffic loops, especially in networks with redundant paths. Without proper loop prevention protocols like Spanning Tree Protocol (STP), loops can cause broadcast storms and network instability. Additionally, switches inherently flood broadcast traffic to all ports within the broadcast domain, except the port on which the broadcast was received. This is because broadcast frames are meant to be delivered to all devices within the VLAN, and the switch ensures this by flooding these frames to all ports in the VLAN, except the source port.

NEW QUESTION # 90

Click the Exhibit button.

How is traffic, sourced from 10.0.0.0/8, treated by the firewall filter shown in the exhibit?

- A. logged and discarded
- B. logged with no further action
- C. logged and rejected

- D. logged and accepted

Answer: D

Explanation:

The firewall filter configuration in the exhibit specifies a filter with two terms. Term 1 matches traffic from the source address 10.0.0.0/8 and has two actions: 'log' and 'next term'. The 'log' action will record the match to a log file, and 'next term' indicates that the firewall should evaluate the next term after logging. There is no explicit action such as 'accept' or 'reject' in term 1, so by default, the traffic will be accepted unless subsequently rejected by another term.

Term 2 has the action 'reject', which discards packets that reach this term. Since there is no 'from' condition in term 2, it acts as a default rule for all traffic not matched by term 1.

Because the traffic sourced from 10.0.0.0/8 matches term 1 and there is no reject action in that term, it will be logged and then accepted by the firewall filter. There is no subsequent term that rejects this specific traffic, so the action from term 2 does not apply to it.

NEW QUESTION # 91

Click the Exhibit button.

Referring to the exhibit, what should be configured on R1 to advertise a default static route into OSPF?

- A. a routing policy
- B. a management interface
- C. a firewall filter
- D. a loopback interface

Answer: A

Explanation:

To advertise a default static route into OSPF on router R1, a routing policy should be configured. This policy would typically include a statement to match the default route (0.0.0.0/0) and then apply an action to set the route as an OSPF external type, which would then be redistributed into the OSPF domain. The routing policy is a set of conditions and actions that determine how routes are imported into or exported from the routing table and how routes are shared between routing instances or routing protocols. After defining the policy, it must be applied to OSPF under the export section of the OSPF configuration on R1. This process will allow R1 to announce the default route to other OSPF routers in the network, which then can use it as a gateway of last resort to reach the Internet or other networks not explicitly known to the OSPF domain.

NEW QUESTION # 92

You want to redeploy a Junos device by clearing the existing configuration and resetting it to factory defaults.

In this scenario, which command would help to accomplish this task?

- A. request systemstorage cleanup
- B. show system storage
- C. request systemstorage cleanup dry-run
- D. request systemzeroize media

Answer: D

Explanation:

The request system zeroize media command on a Junos device securely erases all data, including configuration and log files, and resets the device to its factory default settings. This command is used when redeploying a device to ensure no residual data remains from its previous deployment. It's a comprehensive and secure way to clear all configurations and data, making the device as if it were new.

The other commands listed do not perform a full reset to factory defaults; for example, show system storage displays storage information, and request system storage cleanup offers to delete unnecessary files without resetting the device to factory settings.

NEW QUESTION # 93

.....

It's time to take the Juniper JN0-105 practice test for self-assessment once you have prepared with JN0-105 PDF questions. Taking PrepAwayPDF's web-based Juniper JN0-105 practice test is the best method to feel the real Juniper JN0-105 Exam
