

# SAP C\_S4CPB Cheap Dumps - C\_S4CPB Actual Exam Dumps

Download Valid SAP C\_S4CPB\_2502 Exam Dumps for Best Preparation

**Exam** : **C\_S4CPB\_2502**

**Title** : SAP Certified Associate -  
Implementation Consultant -  
SAP S/4HANA Cloud Public  
Edition

[https://www.passcert.com/C\\_S4CPB\\_2502.html](https://www.passcert.com/C_S4CPB_2502.html)

1 / 3

The product Exam4Labs provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you pass the C\_S4CPB exam by the method which is convenient for you. It is not only cheaper than other dumps but also more effective. The high pass rate of our C\_S4CPB Study Materials has been approved by thousands of candidates, they recognized our website as only study tool to pass C\_S4CPB exam.

You can use this SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE. You can easily assess yourself with the help of our SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) practice software, as it records all your previous results for future use. You can easily judge whether you can pass SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) on the first attempt or not, and if you don't, you can use this software to strengthen your preparation.

>> SAP C\_S4CPB Cheap Dumps <<

## **100% Pass Quiz Authoritative SAP - C\_S4CPB - SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Cheap Dumps**

The Exam4Labs is committed to helping you crack the SAP C\_S4CPB certification exam on the first attempt. To get this objective we offer the most probable, real, and updated SAP SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public

Edition (C\_S4CPB\_2602) exam dumps in three user-friendly formats. These formats of SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) in Procurement and Supply SAP updated practice material are, SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) C\_S4CPB in Procurement and Supply SAP PDF file, desktop SAP C\_S4CPB practice test software, and SAP C\_S4CPB web-based practice test.

## **SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Sample Questions (Q18-Q23):**

### **NEW QUESTION # 18**

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the correct app to verify your data has been migrated successfully (see the documentation for the Bank migration object).

### **Answer:**

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to use the correct SAP app to verify that the bank master data migrated in the previous task was created successfully in the target system.

The correct verification app is:

Manage Banks - Master Data

SAP's documentation for bank maintenance assigns this app to the bank master data role and uses it for maintaining and checking bank records, which matches the verification step after migration.

Business Scenario Explanation

In the previous migration tasks, you:

created the migration project,

selected the Bank migration object,

prepared and uploaded the bank data,

validated and transferred it to staging tables,

completed mapping tasks,

migrated the two bank records.

However, a migration is not considered complete until the data is verified in the target application used for ongoing business maintenance.

For the Bank migration object, that target verification app is:

Manage Banks - Master Data

This app allows you to search for the migrated banks and confirm that the data now exists in SAP S/4HANA Cloud Public Edition.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact bank values that were migrated.

Verification must be done in the correct app, not only in the migration cockpit.

The expected bank records are the two banks from the previous task.

Correct Verification App

Purpose

App

Verify migrated bank master data

Manage Banks - Master Data

SAP documents that bank master maintenance is handled through the bank master data application and the associated bank maintenance role/catalog, which is why this is the correct end-user verification app after bank migration.

Data to Verify

You should verify the two migrated banks:

Bank 1

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

Bank 2

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

Example

If your suffix is 000013, verify:

US / A000013 / Bank of A000013

US / Z000013 / Bank of Z000013

Detailed Step-by-Step Procedure

Step 1: Return to the SAP Fiori launchpad

After finishing the migration:

Go back to the SAP S/4HANA Cloud homepage.

Explanation:

The verification must be performed in the target business app, not only from the migration results screen.

Step 2: Open the app "Manage Banks - Master Data"

From the launchpad search:

Search for:

Manage Banks - Master Data

Open the app.

Explanation:

This is the correct app for checking whether the migrated bank master records now exist in the target system.

Step 3: Search for the first migrated bank

In Manage Banks - Master Data:

In Bank Country/Region, enter:

US

In Bank Key, enter:

A#####

Click Go

Example

If your suffix is 000013, search for:

Bank Country/Region = US

Bank Key = A000013

Explanation:

This checks whether the first migrated bank was created successfully.

Step 4: Verify the first bank details

Confirm that the search result shows the correct bank record:

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

You can also verify address data if visible, such as:

Street = West Chester Pike

City = Newtown Square

Explanation:

This confirms that the first bank master record exists in the target system after migration.

Step 5: Search for the second migrated bank

Clear or update the search criteria and enter:

Bank Country/Region = US

Bank Key = Z#####

Click Go

Example

If your suffix is 000013, search for:

Bank Country/Region = US

Bank Key = Z000013

Explanation:

This checks whether the second migrated bank was created successfully.

Step 6: Verify the second bank details

Confirm that the second search result shows:

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

You can also verify address data if visible, such as:

Street = Lenox Road

City = Atlanta

Explanation:

This confirms that the second bank master record exists in the target system after migration.

Step 7: Confirm successful verification

If both banks are visible in Manage Banks - Master Data, the migration verification is successful.

Explanation:

This is the final proof that the migration did not only complete technically in the cockpit, but also posted the expected business data into the target application.

Expected Result

After this task is completed successfully:

the app Manage Banks - Master Data is used for verification,

Bank 1 is visible:

US / A##### / Bank of A#####

Bank 2 is visible:

US / Z##### / Bank of Z#####

the migrated bank data is confirmed as successfully created in the target system.

## NEW QUESTION # 19

### SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the template for the business role Project Manager - Professional Services (SAP\_BR\_PROJECT\_MANAGER\_PROF) to create a new business role with the following information:

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom business role for project managers in the United States by using the standard SAP template role Project Manager - Professional Services and then restricting the role so users only have the minimum access needed for their job.

The template role used is:

Template Business Role ID: SAP\_BR\_PROJECT\_MANAGER\_PROF

Template Business Role Description: Project Manager - Professional Services The new custom role must be created with exact values defined in the task.

Business Scenario Explanation

In this simulation, you are building a restricted custom role for project managers who work only in the United States.

The goal is to ensure that these end users:

can create and edit projects,

can access only projects occurring in the United States,

cannot work with projects or staffing outside the US,

have only the minimum level of authorization needed.

This is done in two major parts:

Create a new custom business role from the standard SAP template

Restrict the role values so only US-related data is allowed

Important Notes

Always replace ##### with the last 6 digits of your group number.

Every value must be entered exactly as shown.

Even one missing space or incorrect character can cause the simulation validation to fail.

You must also create and assign a launchpad space as part of the custom role creation.

Required Values for Role Creation

Use the following values exactly as shown in the task image.

Parameter

Value

New Business Role ID

BR\_PROJECT\_MANAGER\_PROF\_US\_#####

New Business Role Description

Project Manager - Professional Services - US - #####

Option for Launchpad Spaces

Create and Assign Spaces Based on Space Templates

New Space ID

ZBR\_PROJECT\_MANAGER\_PROF\_US\_#####

Activate IAM Apps

Yes (check the box)

Example

If your suffix is 000457, the values become:

BR\_PROJECT\_MANAGER\_PROF\_US\_000457

Project Manager - Professional Services - US - 000457

ZBR\_PROJECT\_MANAGER\_PROF\_US\_000457

Detailed Step-by-Step Procedure

Part 1: Open the standard template role

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to maintain standard and custom business roles.

Because this task requires creating a custom role from an existing template, this is the correct starting app.

Step 2: Search for the template role

Inside Maintain Business Roles:

In the search/filter area, search for:

SAP\_BR\_PROJECT\_MANAGER\_PROF

or

Project Manager - Professional Services

Open the standard SAP template role.

Explanation:

You must start from the standard template role because the task explicitly says to use the template for:

Project Manager - Professional Services

SAP\_BR\_PROJECT\_MANAGER\_PROF

Part 2: Create the custom role from the template

Step 3: Click "Create Derived Business Role"

On the template role page:

Click:

Create Derived Business Role

Explanation:

This function creates a customer-specific copy based on the standard SAP business role template.

It preserves the delivered role content but allows you to define your own role ID, description, restrictions, and launchpad space.

Step 4: Enter the custom role information

In the creation popup, enter the values exactly as follows:

Template = SAP\_BR\_PROJECT\_MANAGER\_PROF

New Business Role ID = BR\_PROJECT\_MANAGER\_PROF\_US\_#####

New Business Role Description = Project Manager - Professional Services - US - ##### Option for Launchpad Spaces = Create and Assign Spaces Based on Space Templates New Space ID = ZBR\_PROJECT\_MANAGER\_PROF\_US\_##### Activate IAM Apps = checked Explanation:

These values define the new custom project manager role that will later be restricted to US-only access.

The space option is important because the task expects the role to include its own launchpad space.

Step 5: Confirm creation

Click OK

Explanation:

SAP now creates the custom role derived from the template and assigns the new launchpad space at the same time.

Part 3: Verify the newly created custom role

Step 6: Review the new custom role

After creation, SAP opens the new custom role.

Verify:

Business Role ID = BR\_PROJECT\_MANAGER\_PROF\_US\_#####

Business Role Description = Project Manager - Professional Services - US - ##### Business Role Template ID =

SAP\_BR\_PROJECT\_MANAGER\_PROF Explanation:

This confirms the derived role was created correctly from the right SAP template.

Part 4: Maintain role restrictions

Step 7: Open "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This is the most important part of the task.

You are not only creating a role - you are also limiting the role so it only allows US-related values.

Step 8: Understand the rule for restriction maintenance

The PDF/task logic is:

Fields explicitly listed in the restriction table → keep them Restricted and enter the required values All other fields not listed in the task table → set them to Not Maintained Explanation:

This is essential.

If extra fields remain restricted or blank, the role may not validate correctly.

The safest approach is:

only maintain the required fields,

mark all unrelated fields as Not Maintained.

Part 5: Enter the required US restrictions

From your exercise run, the maintained values included restrictions such as:

Keep these kinds of fields restricted with US/1710 values where required Examples from your run:

Bank Country/Region Key

Read, Value Help = US

Value Help = US

Company Code

use 1710 only where the task table explicitly requires it

Purchasing Organization

use 1710 where required

Valuation Area

use 1710 where required

Explanation:

These are the exact business restrictions that make the role usable only for the intended geography and business scope.

Step 9: Set unrelated restriction fields to "Not Maintained"

For every field not included in the task's restriction list, choose:

Not Maintained

Examples from your screenshots included fields like:

Accounting Principle

Authorization Group for Business Partners

Billing Type

These should be Not Maintained unless they are explicitly listed in the task's required restriction table.

Explanation:

This removes unnecessary access and matches the task wording that all other fields should be set to Not Maintained.

Step 10: Save the restrictions

After all required values are entered and unrelated fields are marked Not Maintained:

Click Save

Explanation:

This saves the restriction profile of the role.

If you do not save here, the role will remain incomplete or in draft.

Part 6: Verify launchpad space and page creation

Step 11: Go to Launchpad Spaces

In the custom role:

Open the tab:

Launchpad Spaces

Verify that the assigned space exists:

ZBR\_PROJECT\_MANAGER\_PROF\_US\_#####

Explanation:

Because you selected Create and Assign Spaces Based on Space Templates, SAP should have created and assigned the launchpad space automatically.

Step 12: Verify the created space

Open the assigned space and confirm:

the custom space exists,

it is customer-managed,

the pages are assigned correctly.

Explanation:

This proves that the new business role has its own launchpad structure as required by the task.

Expected Result

After this task is completed successfully:

a new custom role exists based on SAP\_BR\_PROJECT\_MANAGER\_PROF,

the role uses the exact required ID and description,

the role has a custom launchpad space,

IAM apps are activated,

restrictions are maintained for US-only access,

all irrelevant fields are set to Not Maintained,

the role is saved successfully.

## NEW QUESTION # 20

### SIMULATION

#### Business Scenario

You are working on an implementation project and need to assign yourself the Administrator business role to complete your job tasks. Follow the instructions below to assign the Administrator business role to your user.

Prerequisites Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Your Task 1.

Assign the Administrator (BR\_ADMINISTRATOR) business role to your user and save.

#### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 1: Assign the Administrator Business Role to Your User

Objective

The purpose of this task is to assign the standard SAP business role Administrator to your own business user so you can perform the required configuration and administration activities in SAP S/4HANA Cloud.

The required business role is:

Business Role ID: BR\_ADMINISTRATOR

Business Role Description: Administrator

For your exercise, you must always replace ##### with the last 6 digits of your group number. In your case, this was done with your own group suffix during execution.

Why this task is required

In SAP S/4HANA Cloud, access to apps and functions is controlled through business roles.

Without the Administrator role, your user may not be able to:

- open administration apps,
- maintain configuration-related master data,
- assign other roles,
- proceed with later project tasks.

So this task is the first access-enablement step.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system

Use the search bar or app finder.

Search for:

Maintain Business Users

Open the app.

This app is used to maintain business users and assign or remove business roles.

Step 2: Search for your own user

Inside Maintain Business Users:

In the search/filter area, locate the field for User Name or search criteria.

Enter your own user ID.

Click Go.

For example, in your exercise you used your own SAP Learning user.

You must open your own business user because the Administrator role needs to be assigned to your personal user record.

Step 3: Open your user record

After the search results appear:

Click your user entry in the list.

Open the user details screen.

This takes you to the detailed maintenance page where business roles can be reviewed and assigned.

Step 4: Switch to Edit mode

In the business user detail screen:

Click Edit.

Without entering edit mode, the role assignment list is display-only and cannot be changed.

Step 5: Go to Assigned Business Roles

Inside your business user:

Open the tab:

Assigned Business Roles

Review the currently assigned roles.

This tab shows all business roles already assigned to your user and is the correct place to add new ones.

Step 6: Click Add

In the Assigned Business Roles section:

Click Add.

This opens the dialog:

Add Business Roles

The Add dialog is used to search and select standard SAP-delivered business roles.

Step 7: Search for the Administrator role

In the Add Business Roles popup:

In the field Business Role ID, enter:

BR\_ADMINISTRATOR

Click Go.

Select the role:

Administrator

Business Role ID: BR\_ADMINISTRATOR

This is the standard Administrator role required by the task.

You must select the exact standard role, not a custom role.

Step 8: Add the role

After selecting BR\_ADMINISTRATOR:

Click OK or Apply, depending on the popup behavior.

Confirm that the role is added to the list of assigned business roles.

At this point the role is added to your draft changes, but not yet finally saved.

Step 9: Save the user

Back in the business user detail screen:

Click Save.

This is the final and mandatory step.

If you do not save, the Administrator role remains only in draft and is not actually assigned.

Step 10: Verify the assignment

After saving:

Check the Assigned Business Roles list.

Confirm that the Administrator role appears in the list:

BR\_ADMINISTRATOR

Expected Result:

Your user now has the Administrator business role assigned successfully.

What to verify after completion

You should verify the following:

Your user record is saved successfully.

The role Administrator is visible in the assigned roles list.

No draft remains unsaved.

Later administration apps are available to your user.

## NEW QUESTION # 21

### SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z\_EMPLOYEES\_ALL\_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z\_ALL\_EMP\_#####

Space Description: General

Space Title: General

Page ID: Z\_ALL\_EMP\_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z\_EMPLOYEES\_ALL\_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z\_ALL\_EMP\_#####

Space Description: General

Space Title: General

Page ID: Z\_ALL\_EMP\_#####

Page Title: General

Page Description: General

□

## NEW QUESTION # 22

### SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (IEG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication User with the information listed below and save.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new Communication User for the integration scenario Bank Integration with File Interface (IEG).

This communication user will later be used in the integration setup, especially when defining the communication system and communication arrangement.

Business Scenario Explanation

In this scenario, you are setting up the integration for:

Bank Integration with File Interface (IEG)

In SAP S/4HANA Cloud, technical communication between systems is usually handled through:

a Communication User

a Communication System

a Communication Arrangement

This task is the first step in that chain.

The communication user acts as the technical user that the system uses for integration-related authentication.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change spaces, underscores, or capitalization.

The password should not be typed manually if the task says:

Have the system propose a password

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

User Name = IEG\_COMM\_USER\_000013

Description = IEG Communication User

Step 1: Open the app "Communication Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Users

or

Maintain Communication Users

Open the app.

Explanation:

This app is used to create and maintain technical communication users for integration scenarios.

This is the correct starting point because the task explicitly says to create a Communication User.

Step 2: Start creating a new communication user

Inside the Communication Users app:

Click:

New

Explanation:

This starts the creation of a new communication user record.

Step 3: Enter the User Name

In the new communication user screen, enter:

User Name = 1EG\_COMM\_USER\_#####

Example

If your suffix is 000013, enter:

1EG\_COMM\_USER\_000013

Explanation:

This is the technical identifier for the communication user.

It must match the task exactly.

Step 4: Enter the Description

In the Description field, enter exactly:

1EG Communication User

Explanation:

This is the functional description of the technical integration user.

It should be entered exactly as written in the task to avoid validation issues.

Step 5: Let the system propose the password

In the password section:

Do not manually type a password.

Click:

Propose Password

Explanation:

The task explicitly says:

Password = Have the system propose a password

So the correct action is to use the SAP-generated password instead of entering your own value manually.

Step 6: Review the generated password

After clicking Propose Password:

The system generates a password automatically.

If the system displays the password, note it down if needed for later integration steps.

Explanation:

In some cases, the proposed password may later be needed during communication setup or documentation.

Even if not needed later in the simulation, this confirms the correct procedure was followed.

Step 7: Save the Communication User

Click:

Save

Explanation:

This finalizes the creation of the communication user.

Without saving, the technical user will not exist and the later integration steps will fail.

Step 8: Verify the Communication User

After saving, confirm that the communication user exists in the list and displays the correct values:

User Name = 1EG\_COMM\_USER\_#####

Description = 1EG Communication User

Explanation:

This confirms the task is complete and the user is ready to be used in the next integration setup tasks.

Expected Result

After this task is completed successfully:

the communication user exists,

the user name matches the required naming convention,

the description is correct,

the password was proposed by the system,

the user is saved successfully.

□

## NEW QUESTION # 23

.....

Our Exam4Labs has devoted more time and efforts to develop the C\_S4CPB exam software for you to help you successfully obtain
