Exam NS0-005 Quizzes - NS0-005 Practice Exam Online

In recent years, the market has been plagued by the proliferation of learning products on qualifying examinations, so it is extremely difficult to find and select our NS0-005 test questions in many similar products. However, we believe that with the excellent quality and good reputation of our study materials, we will be able to let users select us in many products. Our study materials allow users to use the NS0-005 Certification guide for free to help users better understand our products better. Even if you find that part of it is not for you, you can still choose other types of learning materials in our study materials. We can meet all your requirements and solve all your problems by our NS0-005 certification guide.

Network Appliance NetApp Technology Solutions Professional Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which NetApp feature provides WORM functionality at the volume level?

- A. SnapVault
- B. FlexGroup
- C. SnapLock
- D. SyncMirror

Answer: C

Explanation:

n = SnapLock is a NetApp feature that provides WORM (write once, read many) functionality at the volume level. WORM storage enables you to retain files in unmodified form for a specified retention period. SnapLock protects WORM files at the file level and

prevents them from being modified, even after the retention period has expired. SnapLock is powered by a tamper-proof clock that determines when the retention period for a WORM file has elapsed. SnapLock is available for Cloud Volumes ONTAP systems and supports both NFS and CIFS protocols.

References = WORM storage | NetApp Documentation, WORM storage - NetApp

NEW QUESTION # 37

A customer wants to move file storage to a public cloud and manage their own storage solution.

Which offering should be recommended to this customer?

- A. NetApp Cloud Volumes ONTAP
- B. Amazon FSx for NetApp ONTAP
- C. NetApp Cloud Volumes Service
- D. NetApp BlueXP edge caching

Answer: A

Explanation:

NetApp Cloud Volumes ONTAP is a cloud-native storage solution that allows customers to deploy and manage NetApp hybrid, multi-cloud storage and data services from on-premises sources and cloud service providers. It provides enterprise-grade data and file services, such as NFS, SMB/CIFS, iSCSI and S3, on AWS, Azure, and Google Cloud. It also offers high availability, data protection, storage efficiency, and cost-performance optimization features. It is suitable for customers who want to have more control and flexibility over their cloud storage solution, while leveraging NetApp's technology and expertise.

NEW QUESTION # 38

A company wants to protect the files on their NetApp ONTAP based storage system from ransomware using an external process. If an attack is detected, a Snapshot copy is created, and the Microsoft Active Directory (AD) user access is blocked.

Which ONTAP feature enables this functionality?

- A. Vscan
- B. IPsec
- C. TLS
- D. FPolicy

Answer: D

Explanation:

FPolicy is an ONTAP feature that enables this functionality. FPolicy is a file access notification framework that allows external applications to monitor and control file access on ONTAP storage systems¹. FPolicy can be used to protect files from ransomware by integrating with third-party solutions that use user behavioral analytics (UBA) to detect abnormal activity and trigger actions such as creating a Snapshot copy and blocking the AD user access²³. FPolicy can also be activated with a single click from BlueXP or ONTAP System Manager to protect against common ransomware extensions⁴.

References = 1: FPolicy overview - NetApp, 2: Prevent ransomware spread with ONTAP automatic ransomware protection, 3: Fighting Ransomware, Part Six: Remediation, 4: Proactive ransomware protection-automated with ONTAP - NetApp.

NEW QUESTION # 39

When using NetApp ONTAP software, which role is predefined for cluster administrators?

- A. backup
- B. provision
- C. recovery
- D. support

Answer: D

Explanation:

B). support: The 'support' role is a predefined role in NetApp ONTAP designed for cluster administrators. This role typically has

permissions that allow for various administrative tasks required for supporting and maintaining the health and performance of the ONTAP cluster. These tasks can include monitoring system health, managing configurations, troubleshooting, and other support-related activities.

NEW QUESTION # 40

What are two data types? (Choose two.)

- A. object
- B. RAID
- C. file
- D. LAN
- E. disk

Answer: A,C

Explanation:

A file is a data type that represents a collection of data stored on a disk or other storage device. A file can have a name, an extension, a size, and other attributes. A file can contain any kind of data, such as text, images, audio, video, etc. A file can be opened, read, written, closed, deleted, or moved by a program. An object is a data type that represents an instance of a class, which is a blueprint for creating objects. An object can have properties, which are variables that store data, and methods, which are functions that perform actions on the object. An object can interact with other objects by sending and receiving messages. An object can inherit properties and methods from its parent class, or override them with its own definitions.
