Authoritative Valid ITFAS-Level-1 Learning Materials - Pass ITFAS-Level-1 Exam

Exams4Collection informs you that the Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) questions regularly change the content of the Inspection and Testing of Fire Alarm Systems Level I Exam real exam. Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, Exams4Collection satisfies the needs of NICET ITFAS-Level-1 Exam candidates. The customer will receive updates of Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) real dumps for up to 365 days after buying the product.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

After the secondary power supply has operated the fire alarm system under quiescent load, the secondary power shall be capable of operating all alarm notification appliances for which length of time?

- A. 5 minutes
- B. 10 minutes
- C. 1 hour
- D. 24 hours

Answer: B

Explanation:

Secondary power supplies must meet minimum performance durations to ensure alarm operation when primary power fails.

According to NFPA 72, the system must be able to:

NFPA 72 (2022), Section 10.6.7.2.1.1:

"The secondary power supply shall have sufficient capacity to operate the system under quiescent load for a minimum of 24 hours, followed by 5 minutes of alarm (for emergency voice/alarm communication systems, 15 minutes of alarm), unless otherwise permitted by 10.6.7.2.1.2." However, the default minimum for most systems (non-voice) is:

- * 24 hours in normal (quiescent) mode
- * Followed by 5 minutes of full alarm operation

Correct answer: A. 5 minutes

NEW QUESTION # 27

Which three of the following are how a McCulloh transmitter should be inspected? (Choose three.)

- A. Physical condition
- B. Verify location
- C. System normal condition
- D. Distinct waterflow condition

Answer: A,B,C

Explanation:

McCulloh transmitters are part of older fire alarm systems but are still maintained in some jurisdictions.

Inspection focuses on general condition, correct system status, and location verification.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

Under McCulloh Transmitter:

- * "Inspect physical condition"
- * "Verify location"
- * "Confirm system normal condition"

"Distinct waterflow condition" refers to alarm testing and is not part of the inspection phase.

Correct answers:

- * Physical condition
- * System normal condition
- * Verify location

NEW QUESTION # 28

Which of the following situations is considered an impairment?

- A. Smoke detector within 4 feet of an air supply diffuser
- B. Closed sprinkler valve
- C. Intelligible audibility
- D. Smoke detector within 4 feet of a return air opening

Answer: B

Explanation:

An impairment occurs when part of the life safety system is disabled or rendered ineffective. A closed sprinkler valve directly disables part of the fire suppression system, which meets the definition of an impairment.

NFPA 72 (2022), Section 3.3.149 - Impairment:

"A condition where a fire protection or life safety system or portion thereof is out of service." Smoke detector placement issues may be a code violation but not a system impairment. Intelligible audibility is a positive attribute, not a problem.

Correct answer: A. Closed sprinkler valve

NEW QUESTION # 29

Which activity is required at the semiannual inspection of notification appliances?

- A. Verify location and condition
- B. Verify synchronization of strobes
- C. Verify candela setting
- D. Verify flash rate

Answer: A

Explanation:

Semiannual visual inspection of notification appliances checks their physical condition, mounting, visibility, and labeling- not candela or flash rate.

NFPA 72 (2022), Table 14.3.1 - Visual Inspection Frequencies:

"Visible and audible notification appliances" # Frequency: Semiannually Method: Verify proper location and physical condition

Correct answer: C. Verify location and condition

NEW QUESTION # 30

Smoke detector activation in the ninth-floor elevator lobby shall activate which of the following functions?

- A. Alternate level recall
- B. Ninth-floor supervisory signal
- C. Designated level recall
- D. Ninth-floor trouble signal

Answer: C

Explanation:

The designated level recall function is triggered when a smoke detector is activated in that same elevator lobby. This returns the elevator to that floor (usually the ground or main level) for emergency evacuation, unless smoke is present there, in which case the alternate recall floor is used.

NFPA 72 (2022), Section 21.3.3.1:

"Activation of the smoke detector installed at the designated level shall cause all elevators that serve that level to return to an alternate level." But:

"Smoke detector activation in any other elevator lobby shall recall elevators to the designated level." So:

* If smoke is in the ninth-floor lobby, and that lobby is not the designated level # elevator recalls to designated level.

* Therefore, activation of the ninth-floor smoke detector (not the designated level) causes designated level recall.

Correct answer: B. Designated level recall

NEW QUESTION # 31

.....

One NICET certification will help you get highly favor of large enterprises, it will bring you better opportunities. ITFAS-Level-1 valid exam dumps PDF will be a stepping-stone for you to success. The most important method for passing exams is targeted learning and preparing. Programmatic learning may make you know professional knowledge better. But it will not only cost a lot of your time and energy but also can't guarantee you pass. Our ITFAS-Level-1 Valid Exam Dumps PDF can help you pass exam for sure.
