dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q235-Q240):

NEW QUESTION # 235

You're refactoring a complex dbt model and realize breaking it down into smaller models would improve readability. However, you're concerned about performance overhead due to the additional materializations. How would you address this concern?

- A. Utilize ephemeral materializations for intermediate steps, where appropriate_
- B. Rely on source freshness checks to determine if intermediate models need to be rebuilt_
- C. Profile your models to pinpoint bottlenecks and optimize those specifically.
- D. Switch to incremental materializations for all intermediate models.

Answer: C

Explanation:

Don't optimize prematurely. Profiling lets you identify the most performance-critical parts of your model before changing materializations. The other options may help but targeted optimizations are key.

NEW QUESTION # 236

A package you depend on has released a major update with breaking changes. How might you approach the migration?

- A. Review the release notes and the migration guide provided by the package maintainers.
- B. Pin the package to the older version in your packages.yml file and plan a controlled migration.
- C. Update your packages.yml to point to the new version and immediately refactor all your dependent models.
- D. Fork the package and maintain your own custom version indefinitely.

Answer: A

Explanation:

Understanding the changes is key' Then plan a staged migration to minimize disruption. Forking should be a last resort.

NEW QUESTION # 237

You've defined several source models using .yml files within your models directory. When you run dbt compile, they don't appear in the DAG visualization. What's the MOST likely cause?

- A. You haven't used the ref() function correctly within your source models.
- B. You haven't explicitly configured these sources in your dbt_project.yml file.
- C. The source definitions require additional schema tests to be valid.
- D. The source tables are missing appropriate permissions in your database.

Answer: B

Explanation:

While other issues are possible, sources must have configurations in dbt_project.yml to be included in the DAG.

NEW QUESTION # 238

A project stakeholder requests access to an intermediate stage of a dbt transformation pipeline to validate specific calculations. You need to weigh this request carefully because:

- A. Raw data, development data, and production data often have different levels of data quality, completeness, and timeliness.
- B. Exposing intermediate results can lead to premature analysis based on incomplete data.
- C. All of the above-
- D. Granting access to intermediate data may confuse stakeholders who are not familiar with the full transformation process-

Answer: B

Explanation:

A: Intermediate data might be unrefined and not suitable for decision-making. B: Stakeholders might misinterpret the context of intermediary data. C: It's vital to guide stakeholders to final data outputs designed for analysis.

NEW QUESTION # 239

Regular test runs reveal inconsistent and intermittent test failures, despite no obvious changes to models or source data. What debugging strategies might you use?

- A. Use dbt's logging feature to add detailed output to the test execution.
- B. Consider if external dependencies used within dbt tests are themselves unstable.
- C. Temporarily switch to a more consistent testing environment.
- D. Examine data warehouse performance metrics for resource constraints during test runs.

Answer: A,B,D

Explanation:

Each helps track down potential causes of non-deterministic test behavior. D might be too drastic early on.
