Valid Test SPLK-1002 Braindumps & SPLK-1002 Test Prep

Without no doubt that accuracy of information is of important for a SPLK-1002 study material. It can be said exactly that the precision and accuracy of our TorrentVCE's SPLK-1002 study materials are beyond question. All questions and answers have passed the test of time and are approved by experienced professionals who recommend them as the easiest route to certification testing. Every customer who has used our SPLK-1002 Study Materials consider this to be a material that changes their life a lot, so they recommend it as the easiest way to pass the certification test. Our SPLK-1002 study materials are constantly updated by our experts and improved according to the changing standards of the actual examination standards. We can guarantee that the information on our questions is absolutely true and valid.

Certification Path

Splunk Core Certified User is a recommended entry-level exam to Splunk Core Certified Power User. We encourage all candidates to become Splunk Core Certified Users as their first step in our certification program, though it is not required, Candidates can directly appear for Splunk Core Certified Power User SPLK-1002 Exam.

Splunk Core Certified Power User Exam Sample Questions (Q245-Q250):

NEW QUESTION # 245

A report scheduled to run every 15 mins. but takes 17 mins. to complete is in danger of being_____.

- A. automatically accelerated
- B. all of the above
- C. deleted
- D. skipped or deferred

Answer: D

Explanation:

Explanation

A report that is scheduled to run every 15 minutes but takes 17 minutes to complete is in danger of being skipped or deferred². This means that Splunk may skip some scheduled runs of the report if they overlap with previous runs that are still in progress or defer them until the previous runs are finished². This can affect the accuracy and timeliness of the report results and notifications². Therefore, option A is correct, while options B, C and D are incorrect because they are not consequences of a report taking longer than its schedule interval.

NEW QUESTION # 246

How is a Search Workflow Action configured to run at the same time range as the original search?

- A. Select the "Overwrite time range with the original search" checkbox.
- B. Select the "Use the same time range as the search that created the field listing" checkbox.
- C. Set the earliest time to match the original search.
- D. Select the same time range from the time-range picker.

Answer: B

NEW QUESTION # 247

What field must be present in order to use the timechart command?

- A. time
- B. raw
- C. rime
- D. index

Answer: A

Explanation:

The timechart command in Splunk requires the time field to be present in the dataset because it uses time as the primary axis for charting data. The time field represents the time of events and is essential for commands that generate visualizations based on time, such as timechart. This command groups the events into time intervals and performs statistical functions on those time intervals. Without the time field, the timechart command will not function properly.

Reference:

Splunk Docs - timechart command

NEW QUESTION # 248

Which of the following describes the transaction command?

- A. It allows an exchange of data from one Splunk index to another Splunk index.
- B. It allows an exchange of data from one Splunk system to another Splunk system.
- C. It is an SPL command that groups at least two events together based on shared values in selected fields.
- D. It is an SPL command that groups events together with shared values in selected fields.

Answer: D

Explanation:

The transaction command in Splunk groups multiple related events into a single logical transaction based on shared field values (such as session id or user).

Extract: "The transaction command groups events that share common field values into a single event that represents a transaction."

Option D accurately describes this purpose; options B and C refer to system-level data transfers, which are unrelated to transaction.

NEW QUESTION # 249

Which of the following statements describes an event type?

- A. A knowledge object that is applied before fields are extracted.
- B. A log level measurement: info, warn, error.
- C. A field for categorizing events based on a search string.
- D. Either a log, a metric, or a trace.

Answer: C

Explanation:

This is because an event type is a knowledge object that assigns a user-defined name to a set of events that match a specific search criteria. For example, you can create an event type named `successful_purchase` for events that have `sourcetype=access_combined`, `status=200`, and `action=purchase`. Then, you can use `eventtype=successful_purchase` as a search term to find those events. You can also use event types to create alerts, reports, and dashboards. You can learn more about event types from the Splunk documentation¹. The other options are incorrect because they do not describe what an event type is. A log level measurement is a field that indicates the severity of an event, such as info, warn, or error. A knowledge object that is applied before fields are extracted is a source type, which identifies the format and structure of the data. Either a log, a metric, or a trace is a type of data that Splunk can ingest and analyze, but not an event type.
