

MuleSoft-Platform-Architect-I Reliable Exam Practice, Relevant MuleSoft-Platform-Architect-I Questions

The users of our MuleSoft-Platform-Architect-I exam questions log on to their account on the platform, at the same time to choose what they want to attend the exam simulation questions, the MuleSoft-Platform-Architect-I exam questions are automatically for the user presents the same as the actual test environment simulation MuleSoft-Platform-Architect-I test system, the software built-in timer function can help users better control over time, so as to achieve the systematic, keep up, as well as to improve the user's speed to solve the problem from the side with our MuleSoft-Platform-Architect-I test guide.

If you are overwhelmed with the job at hand, and struggle to figure out how to prioritize your efforts, these would be the basic problem of low efficiency and production. You will never doubt anymore with our MuleSoft-Platform-Architect-I test prep. With our MuleSoft-Platform-Architect-I exam questions, you will not only get the MuleSoft-Platform-Architect-I Certification quickly, but also you can get the best and helpful knowledge. And that when you make a payment for our MuleSoft-Platform-Architect-I quiz torrent, you will possess this product in 5-10 minutes and enjoy the pleasure and satisfaction of your study time.

Relevant MuleSoft-Platform-Architect-I Questions, Latest Study MuleSoft-Platform-Architect-I Questions

There are multiple companies offering MuleSoft-Platform-Architect-I exam material in the market, so we totally understand your inquisitiveness that whom to trust. For your convenience, Exams4sures gives you a chance to try a free demo of Salesforce MuleSoft-Platform-Architect-I Exam Questions, which means you can buy the product once you are satisfied with the features and you think it can actually help you to pass your certification exam.

Salesforce Certified MuleSoft Platform Architect I Sample Questions (Q143-Q148):

NEW QUESTION # 143

A company has started to create an application network and is now planning to implement a Center for Enablement (C4E) organizational model. What key factor would lead the company to decide upon a federated rather than a centralized C4E?

- A. When there are a large number of existing common assets shared by development teams
- B. When various teams responsible for creating APIs are new to integration and hence need extensive training
- C. When development is already organized into several independent initiatives or groups
- D. When the majority of the applications in the application network are cloud based

Answer: C

NEW QUESTION # 144

When can CloudHub Object Store v2 be used?

- A. To store an unlimited number of key-value pairs
- B. To store payloads with an average size greater than 15MB
- C. To store key-value pairs with keys up to 300 characters
- D. To store information in Mule 4 Object Store v1

Answer: C

Explanation:

CloudHub Object Store v2 is a managed key-value store provided by MuleSoft to support various use cases where temporary data storage is required. Here's why Option D is correct:

Key Length Support: Object Store v2 allows storage of keys with a length of up to 300 characters, making it suitable for applications needing flexible and descriptive keys.

Limitations on Size:

Object Store v2 is not intended for large payload storage and has a recommended size limit below 10 MB for each value. Payloads exceeding 15 MB may cause performance issues and are better suited to a file storage system or database.

Option B is incorrect because storing payloads above 15 MB exceeds Object Store's optimal usage specifications.

Key-Value Limits: Object Store v2 is designed for moderate, transient storage needs, and does not support unlimited storage. Thus, Option A is incorrect.

Backward Compatibility: Object Store v2 does not support Mule 4 applications running Object Store v1. Option C is incorrect as Object Store v1 and v2 are distinct.

Reference

For more on CloudHub Object Store v2, refer to MuleSoft documentation on Object Store limitations and configuration.

NEW QUESTION # 145

Which of the following sequence is correct?

- A. API Client implements logic to call an API >> API Consumer requests access to API >> API Implementation routes the request to >> API
- B. API Consumer implements logic to call an API >> API Client requests access to API >> API Implementation routes the request to >> API
- C. API Consumer requests access to API >> API Client implements logic to call an API >> API routes the request to >> API Implementation
- D. API Client implements logic to call an API >> API Consumer requests access to API >> API routes the request to >> API Implementation

Answer: C

Explanation:

Correct Answer : API Consumer requests access to API >> API Client implements logic to call an API >> API routes the request to >> API Implementation

>> API consumer does not implement any logic to invoke APIs. It is just a role. So, the option stating "API Consumer implements logic to call an API" is INVALID.

>> API Implementation does not route any requests. It is a final piece of logic where functionality of target systems is exposed. So, the requests should be routed to the API implementation by some other entity. So, the options stating "API Implementation routes the request to >> API" is INVALID

>> The statements in one of the options are correct but sequence is wrong. The sequence is given as "API Client implements logic to call an API >> API Consumer requests access to API >> API routes the request to >> API Implementation". Here, the statements in the options are VALID but sequence is WRONG.

>> Right option and sequence is the one where API consumer first requests access to API on Anypoint Exchange and obtains client credentials. API client then writes logic to call an API by using the access client credentials requested by API consumer and the requests will be routed to API implementation via the API which is managed by API Manager.

NEW QUESTION # 146

An API has been updated in Anypoint exchange by its API producer from version 3.1.1 to 3.2.0 following accepted semantic versioning practices and the changes have been communicated via the APIs public portal. The API endpoint does NOT change in the new version. How should the developer of an API client respond to this change?

- A. The API producer should be requested to run the old version in parallel with the new one
- B. The API producer should be contacted to understand the change to existing functionality
- C. The API client code only needs to be changed if it needs to take advantage of the new features
- D. The API clients need to update the code on their side and need to do full regression

Answer: C

NEW QUESTION # 147

An enterprise is embarking on the API-led digital transformation journey, and the central IT team has started to define System APIs. Currently there is no Enterprise Data Model being defined within the enterprise, and the definition of a clean Bounded Context Data Model requires too much effort.

According to MuleSoft's recommended guidelines, how should the System API data model be defined?

- A. The data model of the System APIs should make use of data types that approximately mirror those from the back-end systems
- B. The data model should define its own naming convention, and not follow the same naming as the back-end systems
- C. If there are misspellings of the data fields in the back-end system, System APIs should not correct it, and expose it as-is to mirror the back-end systems
- D. The System APIs should expose all back-end system fields

Answer: A

Explanation:

When defining data models for System APIs without an established Enterprise Data Model, MuleSoft recommends mirroring the back-end systems' data types to achieve quick and effective integration without adding complexity. This approach has several benefits:

Alignment with Backend Systems:

Mirroring data types ensures consistency with backend data sources, which simplifies integration, reduces mapping requirements, and minimizes potential data transformation issues.

Flexibility for Future Enhancements:

By retaining close alignment with backend data structures, System APIs can evolve to support an Enterprise Data Model in the future without immediate restructuring.

of Incorrect Options:

Option A (exposing misspellings) is not recommended as System APIs should still ensure a professional and coherent interface.

Option C (custom naming) complicates the API structure without adding immediate value in the absence of a clear data model.

Option D (exposing all fields) is unnecessary and can reduce performance and add complexity.

Reference

Refer to MuleSoft best practices for data modeling in System APIs for additional information on mirroring backend systems.

NEW QUESTION # 148

.....

Are you tired of preparing different kinds of exams? Are you stuck by the aimless study plan and cannot make full use of sporadic time? Are you still overwhelmed by the low-production and low-efficiency in your daily life? If your answer is yes, please pay attention to our MuleSoft-Platform-Architect-I guide torrent, because we will provide well-rounded and first-tier services for you, thus supporting you obtain your dreamed MuleSoft-Platform-Architect-I certificate and have a desired occupation. We can say that our MuleSoft-Platform-Architect-I test questions are the most suitable for examinee to pass the exam, you will never regret to buy it.
