Salesforce-MuleSoft-Developer-I Instant Download - Real Salesforce-MuleSoft-Developer-I Dumps Free

For added reassurance, we also provide you with up to 1 year of free Salesforce Dumps updates and a free demo version of the actual product so that you can verify its validity before purchasing. The key to passing the Salesforce Salesforce-MuleSoft-Developer-I exam on the first try is vigorous Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) practice. And that's exactly what you'll get when you prepare from our Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) practice material. Each format of our Salesforce-MuleSoft-Developer-I study material excels in its own way and serves to improve your skills and gives you an inside-out understanding of each exam topic.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.
Topic 2	<ul style="list-style-type: none"> Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.
Topic 3	<ul style="list-style-type: none"> Building API Implementation Interfaces: This topic involves manually creating a RESTful interface for a Mule application and generating a REST Connector from a RAML specification. It also includes describing the features and benefits of APIkit.
Topic 4	<ul style="list-style-type: none"> Routing Events: It focuses on using the Choice router for conditional logic and the Scatter-Gather router to multicast events. This topic also involves validating data by using the Validation module.
Topic 5	<ul style="list-style-type: none"> Accessing and Modifying Mule Events: It describes the Mule event data structure. Moreover, the topic focuses on usage of transformers and enriching Mule events.
Topic 6	<ul style="list-style-type: none"> Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.
Topic 7	<ul style="list-style-type: none"> Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.
Topic 8	<ul style="list-style-type: none"> Structuring Mule Applications: Structuring Mule applications covers parameterizing an application and defining and reusing global configurations. It includes breaking an application into multiple flows using private flows, subflows, and the Flow Reference component.
Topic 9	<ul style="list-style-type: none"> Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.
Topic 10	<ul style="list-style-type: none"> Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.
Topic 11	<ul style="list-style-type: none"> Creating Application Networks: The topic of creating Application Networks encompasses understanding MuleSoft's proposal for closing the IT delivery gap and describing the role and characteristics of the modern API. It also includes the purpose and roles of a Center for Enablement (C4E), and the benefits of API-led.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q112-Q117):

NEW QUESTION # 112

A Mule project contains a DataWeave module like WebStore.dwl that defines a function named loginUser. The module file is located in the project's src/main/resources/libs/etl folder.

What is correct DataWeave code to import all of the WebStore.dwl file's functions and then call the loginUser function for the login 'Todd.Pal@mulesoft.com'?

- A. 1. import libs.etl
2. ---
3. WebStore.loginUser("Todd.Pal@mulesoft.com")
- B. 1. import * from libs::etl
2. ---
3. WebStore::loginUser("Todd.Pal@mulesoft.com")
- C. 1. import libs.etl.WebStore
2. ---
3. loginUser("Todd.Pal@mulesoft.com")
- **D. 1. import * from libs::etl::WebStore**
2. ---
3. loginUser("Todd.Pal@mulesoft.com")

Answer: D

Explanation:

* To use custom modules, you need to import the module or functions you want to use by adding the import directive to the head of your DataWeave script, for example:

1) Does not identify any functions to import from the String module:

```
import dw::core::Strings
```

2) To identify a specific function to import from the String module:

```
import camelize, capitalize from dw::core::Strings
```

3) To import all functions from the String module:

```
import * from dw::core::Strings
```

The way you import a module impacts the way you need to call its functions from a DataWeave script. If the directive does not list specific functions to import or use * from to import all functions from a function module, you need to specify the module when you call the function from your script.

* In given scenario, it's mentioned to import all of the WebStore.dwl

So correct answer is:

NEW QUESTION # 113

A Mule application contains a global error handler configured to catch any errors.

Where must the global error handler be specified so that the global error handler catches all errors from flows without their own error handlers?

- A. The pom.xml file
- **B. A global element**
- C. Nowhere, the global error handler is automatically used
- D. A configuration properties file

Answer: B

Explanation:

Correct answer is A global element

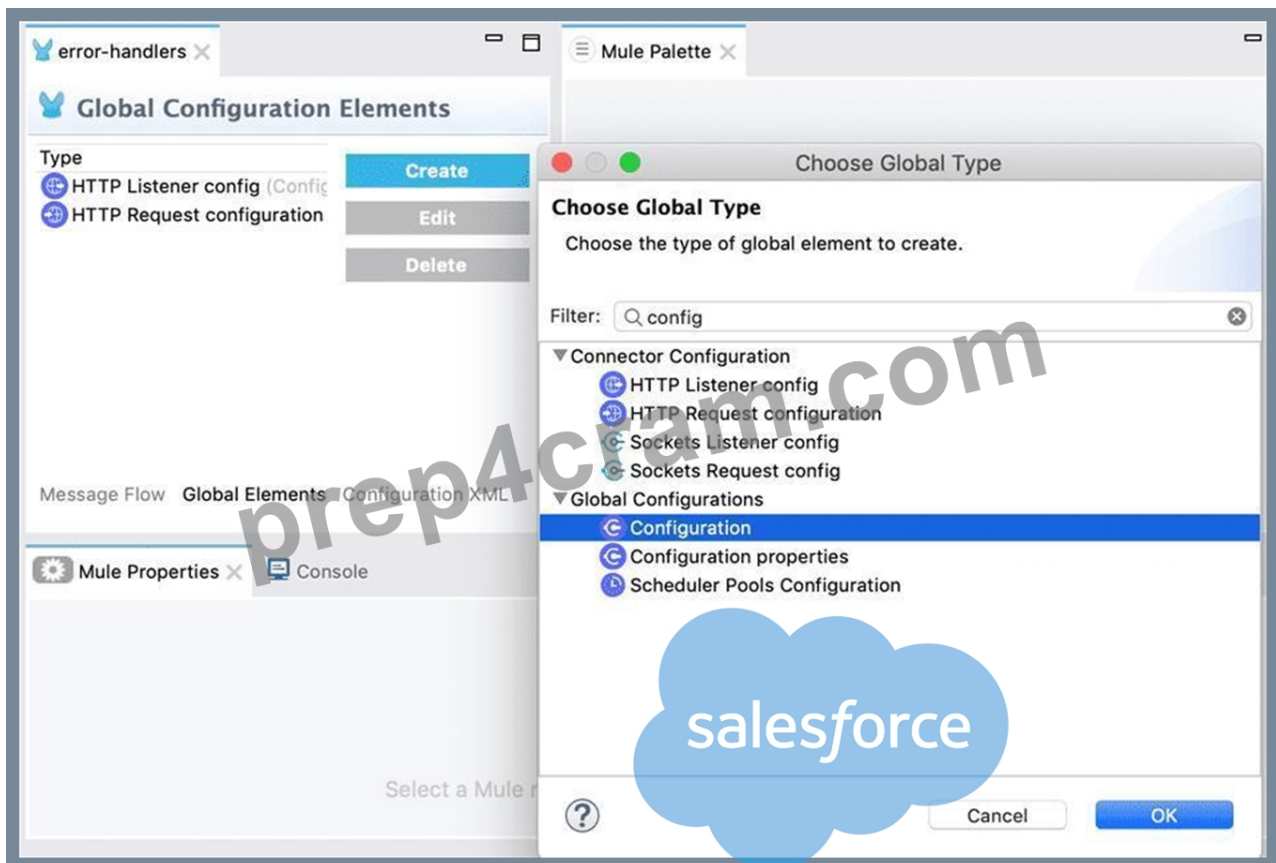

Global error handlers are to be created in global element .

Quick note to remember here is Global error handlers come in to picture only when there are no error handlers specified as flow level.

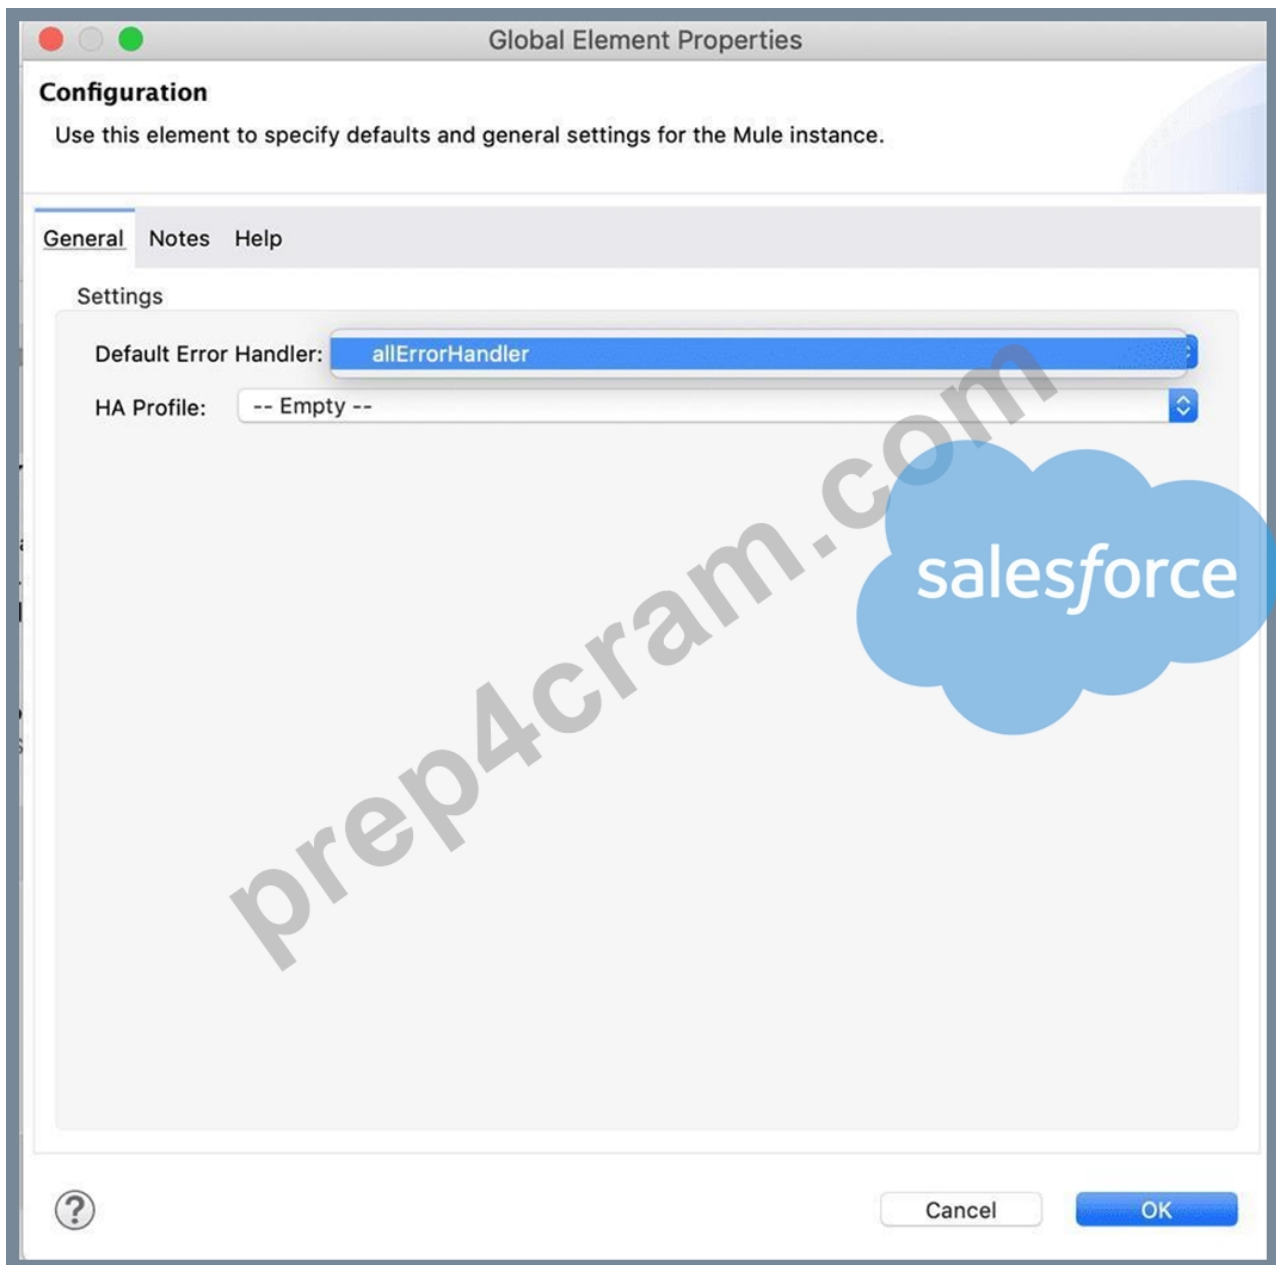

Steps to create Global error handler

1) Click Global Elements to open Global Configuration Elements. Global Elements is located below the Studio canvas

2) In Global Configuration Elements, click Create to open the Choose Global Type dialog Graphical user interface, text, application, chat or text message Description automatically generated

3) From the dialog, select Global Configuration -# Configuration, and then click OK to open the Configuration dialog. Graphical user interface, text, application, email Description automatically generated

4) From the select Configuration dialog, select allErrorHandler for the Default Error Handler field, and click OK.

NEW QUESTION # 114

The new RAML spec has been published to Anypoint Exchange with client credentials. What is the next step to gain access to the API?

- A. Request access to the API in Anypoint Exchange
- B. No additional steps needed
- C. Create a new client application
- D. Email the owners of the API

Answer: A

Explanation:

Correct answer is Request access to the API in Anypoint Exchange. This way we can get clientId and Client secret which we can use to access the API

NEW QUESTION # 115

Which of the module is imported automatically in Dataweave scripts?

- A. dw::System
- B. dw::Runtime
- C. dw::core
- D. dw::Crypto

Answer: C

Explanation:

Core (dw::Core) This module contains core DataWeave functions for data transformations. It is automatically imported into any DataWeave script.

NEW QUESTION # 116

A Mule application contains an ActiveMQ JMS dependency. The Mule application was developed in Anypoint Studio and runs successfully in Anypoint Studio.

The Mule application must now be exported from Anypoint Studio and shared with another developer.

What export options create the smallest JAR file that can be imported into the other developer's Anypoint Studio and run successfully?

The screenshot shows the 'Export Mule Application' dialog in Anypoint Studio. It lists four options (A, B, C, D) with checkboxes for 'Attach project sources' and 'Include project modules and dependencies'. Option B is selected, and both checkboxes are checked. A watermark 'salesforce' and 'PrepAcram.com' are visible over the options.

Option	Attach project sources	Include project modules and dependencies
A. <input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
B. <input checked="" type="radio"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
C. <input type="radio"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
D. <input type="radio"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: B

NEW QUESTION # 117

.....

Sometimes if you want to pass an important test, to try your best to exercise more questions is very necessary, which will be met by our Salesforce-MuleSoft-Developer-I exam software, and the professional answer analysis also can help you have a better understanding. the multiple versions of free demo of Salesforce-MuleSoft-Developer-I Exam Materials can be offered in our website. Try to find which version is most to your taste; we believe that our joint efforts can make you pass Salesforce-MuleSoft-Developer-I certification exam.
