Test Certification NCP-US-6.5 Cost | Reliable NCP-US-6.5: Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 100% Pass

If you are considering to get help from the exam braindumps for you to pass the exam, you need to get a reliable and authentic valid NCP-US-6.5 study material, which will help you to pass exams with an ease. But, this is also a must have updated NCP-US-6.5 exam questions to save you from the tedious task of collecting resources from multiple sources. And at the same time, the NCP-US-6.5 learning guide must stand the test of the market and can make the customers understood by all over the world. And these are exactly the advantages of our NCP-US-6.5 practice engine has. Just come and have a try!

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q33-Q38):

NEW QUESTION # 33

Users are complaining about having to reconnecting to share when there are networking issues.

Which files feature should the administrator enable to ensure the sessions will auto-reconnect in such events?

- A. Connected Shares
- B. Multi-Protocol Shares
- C. Workload Optimization
- D. Durable File Handles

Answer: D

Explanation:

The Files feature that the administrator should enable to ensure the sessions will auto-reconnect in such events is Durable File Handles. Durable File Handles is a feature that allows SMB clients to reconnect to a file server after a temporary network disruption or a client sleep state without losing the handle to the open file. Durable File Handles can improve the user experience and reduce the risk of data loss or corruption. Durable File Handles can be enabled for each share in the Files Console. NEW QUESTION # 34

Which scenario is causing the alert and need to be addressed to allow the entities to be protected?

- A. The logical timestamp for one or more of the Volume Groups is not consistent between clusters
- B. One or more VMs or Volume Groups belonging to the Consistency Group contains state metadata
- C. One or more VMs or Volume Groups belonging to the Consistency Group may have been deleted
- D. One or more VMs or Volume Groups belonging to the Consistency Group is part of multiple Recovery Plans configured with a Witness.

Answer: C

Explanation:

The scenario that is causing the alert and needs to be addressed to allow the entities to be protected is that one or more VMs or Volume Groups belonging to the Consistency Group may have been deleted. A Consistency Group is a logical grouping of VMs or Volume Groups that are protected together by a Protection Policy. A Protection Policy is a set of rules that defines how often snapshots are taken, how long they are retained, and where they are replicated for disaster recovery purposes. If one or more VMs or Volume Groups belonging to the Consistency Group are deleted, the Protection Policy will fail to protect them and generate an alert with the code AI303551 - VolumeGroupProtectionFailed. NEW QUESTION # 35

Which metric is utilized when sizing a Files deployment based on performance requirements?

- A. Quantity of NFS exports
- B. Quantity of SMB shares
- C. NFS concurrent connections
- D. SMB concurrent connections

Answer: D

Explanation:

This metric indicates the number of active clients that are accessing the Files cluster via SMB protocol, which affects the performance of the Files cluster. NFS concurrent connections is also a relevant metric, but it is not the best answer, as it only applies to NFS protocol, not SMB. The quantity of SMB shares or NFS exports does not directly affect the performance of the Files cluster, as they are logical entities that do not consume resources. NEW QUESTION # 36

What are two ways to manage Objects? (Choose two.)

- A. API
- B. SSH
- C. CLI
- D. PC

Answer: A,D

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on. Reference: Nutanix Objects User Guide; Nutanix Objects API Reference Guide

NEW QUESTION # 37

Immediately after creation, the administrator is asked to change the name of Objects store. How will the administrator achieve this request?

- A. Update the name of the Objects stores by using a CORS XML file
- **B. Delete and recreate a new Objects store with the updated name.**
- C. Enable versioning and then rename the Objects store, disable versioning
- D. The Objects store can only be renamed if hosted on ESXi.

Answer: B

Explanation:

The administrator can achieve this request by deleting and recreating a new Objects store with the updated name. Objects is a feature that allows users to create and manage object storage clusters on a Nutanix cluster. Objects clusters can provide S3-compatible access to buckets and objects for various applications and users. Objects clusters can be created and configured in Prism Central. However, once an Objects cluster is created, its name cannot be changed or edited. Therefore, the only way to change the name of an Objects cluster is to delete the existing cluster and create a new cluster with the updated name.
