Love is precious and the price of freedom is higher. Do you think that learning day and night has deprived you of your freedom? Then let Our H13-624_V5.5 Guide tests free you from the depths of pain. Our study material is a high-quality product launched by the TestPassKing platform. And the purpose of our study material is to allow students to pass the professional qualification exams that they hope to see with the least amount of time and effort.

We are steely to be the first-rank H13-624_V5.5 practice materials in this area. On your way to success, we are the strong backups you can depend on. We have confidence that your career will be in the ascendant with the passing certificate of the H13-624_V5.5 Study Guide as a beginning. With the unbeatable high pass rate as 98% to 100%, no one can do this job better than us to help you pass the H13-624_V5.5 exam. Just give you a chance to success!

H13-624_V5.5 Reliable Exam Simulator - Valid Test H13-624_V5.5 Fee

Those who are ambitious to obtain H13-624_V5.5 certification mainly include office workers; they expect to reach a higher position and get handsome salary, moreover, a prosperous future. All of these requirements our H13-624_V5.5 exam materials can meet. Our H13-624_V5.5 study materials can help you pass the exam successful. Before you decide to buy our H13-624_V5.5 Exam Torrent, you can free download the demo of our H13-624_V5.5 exam questions, which contains a few of questions and answers of our H13-624_V5.5 training guide.

Huawei H13-624_V5.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Storage System O&M Management: This section of the exam measures the skills of a Storage Operations Specialist and covers the daily operational management of Huawei storage systems. It emphasizes practical abilities in system monitoring, troubleshooting, fault handling, and health checks. The goal is to ensure smooth, reliable operations and reduce risks through proactive maintenance and efficient use of Huawei's O&M tools.
Topic 2	<ul style="list-style-type: none">Storage Technology Trends: This section of the exam measures skills of a Data Center Specialist and covers the latest advancements in the storage industry. It focuses on emerging technologies that are shaping intelligent storage development, including trends like AI integration, green computing, and cloud-oriented storage evolution. Candidates are expected to understand how these trends influence storage planning and deployment in modern IT environments.
Topic 3	<ul style="list-style-type: none">Basic Storage Technologies: This section of the exam measures the skills of a Storage Engineer and includes fundamental knowledge of storage systems. It covers key concepts such as intelligent storage architecture, RAID levels, storage networking, and widely used data protocols. The section also introduces the structure and function of SAN and NAS environments. A strong grasp of these basic technologies helps professionals support large-scale data infrastructure with efficiency and stability.
Topic 4	<ul style="list-style-type: none">Huawei Intelligent Storage Products and Features: This section of the exam measures the skills of a Storage Administrator and focuses on Huawei's intelligent storage solutions. It includes understanding product models, management interfaces, and advanced features like storage tuning and data protection. Candidates will explore how to manage system operations, optimize resource usage, and apply Huawei-specific technologies for secure and high-performance storage deployment.

Huawei HCIP-Storage V5.5 Sample Questions (Q41-Q46):

NEW QUESTION # 41

An OceanStor 9000 storage system consisting of 6 P36 nodes, which of the following are composed of?
(multiple choice)

- A. IPNI management network
- B. wushan file system business management network
- C. Back-end storage network
- D. Front-end business network

Answer: B,C,D

NEW QUESTION # 42

When delivering a Huawei flash storage project, an engineer introduced the SAN/NAS Integrated architecture to the customer. Which of the following statements is false about the architecture?

- A. The space management layer uses the active-active high reliability mode to provide reliable data protection capabilities based on actual service scenarios of customers.
- B. The protocol layer is responsible for protocol parsing and permission management. SAN and NAS are two sets of semantic logic. Therefore, different service entry components are used.
- C. The software architecture consists of the following layers from top to bottom: protocol, data service, cache, file and block space management, and storage pool.
- D. At the protocol layer, NFS/CIFS supports direct TCP offload engine (DT06), while ISCSI does not.

Answer: D

NEW QUESTION # 43

Assume a financial customer purchases a Huawei OceanStor Pacific scale-out storage system for future service deployment. Which statement is false about software installation of the storage system?

- A. During block service installation, if management nodes are deployed where compute and storage nodes are converged, the number of vCPUs on each converged compute and storage node must be greater than or equal to 20.
- **B. If wizard-based software installation is used, an engineer must manually add nodes, configure networks, and create a control cluster on DeviceManager, and then install the OceanStor Pacific series software.**
- C. During block service installation, if converged deployment of storage and compute nodes is required, the difference between the disk quantities on any two nodes in the same storage pool cannot be greater than 2 or 30% of the disk quantity on the node having most disks.
- D. To install the Distributed Parallel Client (DPC), the memory required for running the DPC software on a compute node must be greater than or equal to 20 GB.

Answer: B

Explanation:

The software installation process for Huawei OceanStor Pacific scale-out storage systems is detailed in the *HCIP-Storage V5.5 Training Material (Module 3: Scale-Out Storage Technologies)*. Let's evaluate each option:

- Option A: True. The material states: "For block service installation with converged compute and storage nodes, each node requires at least 20 vCPUs to support management and data processing tasks."

- Option B: True. The material confirms: "In converged deployments, the disk quantity difference between any two nodes in a storage pool must not exceed 2 or 30% of the disk count on the node with the most disks to ensure balanced performance."

- Option C: False. The material explains: "Wizard-based software installation automates node addition, network configuration, and control cluster creation via DeviceManager, reducing manual steps. Engineers do not need to perform these tasks manually before installing the OceanStor Pacific software." This makes the statement incorrect.

- Option D: True. The material notes: "DPC installation requires a minimum of 20 GB of memory on compute nodes to ensure stable operation." Thus, option C is false.

Reference:

HCIP-Storage V5.5 Training Material, Module 3: Scale-Out Storage Technologies, Section 3.12: Software Installation and Configuration*, Huawei Technologies Co., Ltd.

NEW QUESTION # 44

Huawei OceanProtect Appliance provides strong data protection capabilities. Which of the following statements is true about the functional architecture of the Appliance?

- A. During data protection, the Appliance can protect application data without backup agents.
- B. File system management and protocol access are implemented by the data protection layer.
- C. ProtectManager is a data flow module that performs data backup, restoration, replication, archive, and copy mounting.
- **D. DataEnable Engine is a data enabling module for global search and data anonymization.**

Answer: D

Explanation:

Huawei's official OceanProtect functional architecture describes the Data enablement engines providing global search and data anonymization functions, which matches option D.

Option A is incorrect because ProtectManager is the management module, while backup, restore, replication, archive, and copy mount belong to the data protection layer/data flow functions, not ProtectManager.

Option B is incorrect because file system management and protocol access are provided by the basic storage service/basic storage layer, not the data protection layer.

Option C is incorrect because OceanProtect Appliance supports protecting application data through its protection ecosystem, but the statement "without backup agents" is not the functional-architecture definition that matches this question. The architecture item explicitly matched in Huawei material is the DataEnable Engine description in option D

NEW QUESTION # 45

When delivering Huawei all-flash projects, Huawei engineers introduced the HyperCDP feature of flash storage to customers. Which of the following statements are true about this feature?

- **A. When an application server sends a request to write data to the source LUN after a HyperCDP snapshot is created, the**

storage system uses the copy-on-write (COW) technology to save the new data to a new location in the storage pool and directs the source LUN's pointer to the new location.

- B. HyperCDP snapshots cannot be directly mapped to hosts. To read data from a HyperCDP snapshot due to actual service requirements, the administrator needs to share the file system with the host so that the host can read the source file system data at the point in time when the HyperCDP snapshot was created.
- C. HyperCDP is a high-density snapshot and requires the system to construct file system objects. Therefore, the system memory usage is high.
- D. Copies created using HyperCDP can be used for data analysis and application testing.

Answer: A,D

NEW QUESTION # 46

.....

They work closely and check all Huawei H13-624_V5.5 exam practice test questions step by step and ensure the top standard of H13-624_V5.5 exam questions all the time. So rest assured that with the H13-624_V5.5 exam dumps you will get everything that you need to prepare and pass the Huawei H13-624_V5.5 Certification Exam with good scores. Countless HCIP-Storage V5.5 exam candidates have passed their H13-624_V5.5 exam and they all got help from real and updated Huawei H13-624_V5.5 exam questions. You can also be the next successful candidate for the H13-624_V5.5 certification exam.
