Sure JN0-637 Pass | New JN0-637 Exam Papers

The passing rate of our JN0-637 training quiz is 99% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important JN0-637 information and follow the latest trend to make the client learn easily and efficiently. We update the JN0-637 Study Materials frequently to let the client practice more and follow the change of development in the practice and theory.

Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	• Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.
Topic 2	• Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.
Topic 3	• Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.
Topic 4	• Layer 2 Security: It covers Layer 2 Security concepts and requires candidates to configure or monitor related scenarios.
Topic 5	• Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.
Topic 6	• Troubleshooting Security Policies and Security Zones: This topic assesses the skills of networking professionals in troubleshooting and monitoring security policies and zones using tools like logging and tracing.
Topic 7	• Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.

New JN0-637 Exam Papers | JN0-637 Learning Materials

The pass rate is 98.75%, and we can ensure you pass the exam successfully if you buying JN0-637 exam braindumps from us. Most candidates can pass the exam just one time. And we ensure you that if you can't pass the exam, you just need to send us the failure scanned, we will refund your money. We can ensure you that your money can receive rewards. In addition, we have three versions for JN0-637 Training Materials, and you can buy the most suitable in accordance with your own needs.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q113-Q118):

NEW QUESTION # 113
You have designed the firewall filter shown in the exhibit to limit SSH control traffic to yours SRX Series device without affecting other traffic.
Which two statement are true in this scenario? (Choose two.)

- A. The filter should be applied as an output filter on the loopback interface.
- B. Applying the filter will achieve the desired result.
- C. The filter should be applied as an input filter on the loopback interface.
- D. Applying the filter will not achieve the desired result.

Answer: B,C

Explanation:
Based on general practices, to limit SSH control traffic to an SRX device without affecting other traffic, you would typically apply a firewall filter as an input filter on the loopback interface. The filter would specify the allowed source addresses or networks for SSH and deny all other SSH traffic.
Therefore, the two statements that are likely to be true, in general, are:
Applying the filter will achieve the desired result (assuming the filter is correctly written).
The filter should be applied as an input filter on the loopback interface (as this is the standard practice).

NEW QUESTION # 114
Exhibit
Which two statements are correct about the output shown in the exhibit. (Choose two.)

- A. The source address is translated.
- B. The packet is an SSH packet
- C. The destination address is translated.
- D. The packet matches a user-configured policy

Answer: A,B

NEW QUESTION # 115
What are three configurable monitor components for a service redundancy group? (Choose two)

- A. Interface
- B. BFD
- C. IP
- D. ARP
- E. hardware alarm

Answer: A,C,D

NEW QUESTION # 116
How does an SRX Series device examine exception traffic?

- A. The device examines the host-outbound traffic for the egress interface and zone.
- B. The device examines the host-inbound traffic for the ingress interface and zone.
- C. The device examines the host-inbound traffic for the egress interface and zone.

- D. The device examines the host-outbound traffic for the ingress interface and zone.

Answer: B

Explanation:
Exception traffic, including management and control plane traffic, is handled by examining host- inbound traffic configurations at the ingress interface and zone. It ensures traffic reaches necessary services like SSH and IKE securely.
SRX Series devices handle exception traffic (such as management traffic like SSH, Telnet, DNS queries, etc.) differently than regular transit traffic. Exception traffic is examined based on host- inbound traffic for the ingress interface and zone. If traffic is destined for the device itself (e.g., management traffic or routing protocol messages), it must be allowed as host-inbound traffic on both the ingress interface and zone.

NEW QUESTION # 117
Exhibit
Which two statements are correct about the output shown in the exhibit? (Choose two.)

- A. The packet matches a configured security policy.
- B. The packet is processed in the first path packet flow.
- C. The packet is processed as host inbound traffic.
- D. The packet matches the default security policy.

Answer: C,D
