H35-211_V2.5 Valid Exam Vce Free - Latest H35-211_V2.5 Dumps

It is a truth universally acknowledged that the exam is not easy but the related H35-211_V2.5 certification is of great significance for workers in this field so that many workers have to meet the challenge, I am glad to tell you that our company aims to help you to pass the examination as well as gaining the related certification in a more efficient and simpler way. During recent 10 years, our H35-211_V2.5 Exam Questions have met with warm reception and quick sale in the international market. Our H35-211_V2.5 study materials are not only as reasonable priced as other makers, but also they are distinctly superior in the following respects.

Huawei HCIP-Access V2.5 Sample Questions (Q63-Q68):

NEW QUESTION # 63

(Radio) The downstream effective bandwidth of a GPON PON port is:

- A. 1.25 Gbit/s
- B. 2.2 Gbit/s
- C. 2 Gbit/s
- D. 2.5 Gbit/s

Answer: D

Explanation:

GPON (per ITU-T G.984.x and Huawei OLT specifications) provides a downstream line rate of ~2.488 Gbit/s, commonly denoted as 2.5 Gbit/s, and an upstream rate of ~1.244 Gbit/s (1.25 Gbit/s). Therefore, the downstream effective bandwidth option that matches GPON is 2.5 Gbit/s.

References: HCIP-Access V2.5-PON technology overview (GPON rates); Huawei OLT Product Description (GPON port downstream/upstream rates).

NEW QUESTION # 64

The Class D multicast address range is from 224.0.0.0 to 238.255.255.255.

- A. True
- B. False

Answer: B

Explanation:

IPv4 multicast (historically "Class D") occupies the address block 224.0.0.0 through 239.255.255.255. Any upper bound of 238.255.255.255 is incorrect because it excludes the full 239/8 administratively scoped range.

This is standardized in the IANA IPv4 Multicast Address Space registry and reflected in foundational multicast specifications.

NEW QUESTION # 65

(Multiple choice) Which of the following measures can be adopted by GPON in terms of traffic control

- A. flow-car
- B. tcontcar
- C. gem mapping
- D. Gem-car

Answer: A,D

NEW QUESTION # 66

Which of the following is a RADIUS feature?

- A. After a user passes authentication, the returned message is different from that returned by the HWTACACS server.
- B. The same transmission protocol as HWTACACS is used.
- C. You can adjust the fields to be encrypted in packets according to user requirements.
- D. RADIUS has reliable transmission.

Answer: A

Explanation:

A: Incorrect - RADIUS typically uses UDP (1812/1813), while HWTACACS/TACACS+ uses TCP (port 49).

B: Incorrect - In RADIUS, only the user-password attribute is encrypted; fields are not selectively encrypted by user choice. TACACS+ can encrypt the entire payload.

D: Incorrect - Because RADIUS uses UDP, transport is not inherently reliable.

C: Correct - RADIUS and HWTACACS differ in message structure and returned attributes after authentication (e.g., RADIUS attribute-value pairs for access control/QoS/VLAN vs. HWTACACS command /privilege oriented responses). Thus the returned content/format differs between the two.

References: HCIP-Access V2.5 Study Guide - AAA overview and comparison of RADIUS vs HWTACACS (transport, encryption scope, response attributes).

NEW QUESTION # 67

(Single) When deploying home and guest services in a PON system, which of the following services has the highest priority?

- A. GAME
- B. INTERNET
- C. IPTV
- D. VOIP

Answer: D

Explanation:

In access networks, Huawei recommends prioritizing real-time voice (VoIP) traffic with the highest forwarding priority (typically EF, 802.1p 5) to ensure low latency and jitter. IPTV/video is generally next (AF classes), while gaming and general Internet browsing are treated lower than voice. Therefore, VOIP receives the top priority to protect call quality under congestion.
