

Latest Upload ISO-IEC-27001-Foundation Valid Exam Topics - APMG-International New ISO/IEC 27001 (2022) Foundation Exam Exam Questions

Most of the study material providers fail to provide insight on the ISO-IEC-27001-Foundation real exam questions to the candidates of certification exams. There is such scene with Exam-Killer products. They are in fact made, keeping in mind the ISO-IEC-27001-Foundation Actual Exam. Thus every ISO-IEC-27001-Foundation exam dumps is set in line with the format of real exam and introduces the candidate to it perfectly.

APMG-International ISO-IEC-27001-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Self Confidence: Self-confidence is the belief in one's abilities, competence, and value, reflecting a sense of assurance and inner strength.
Topic 2	<ul style="list-style-type: none">• Cybersecurity: Cybersecurity, also known as IT security or computer security, involves safeguarding computer systems, networks, and data from unauthorized access, theft, damage, or disruption to ensure the integrity and availability of digital information.
Topic 3	<ul style="list-style-type: none">• Information Management (IM): Information management (IM) encompasses the entire lifecycle of information within an organization—from its collection and storage to its distribution, use, and eventual archiving or disposal.
Topic 4	<ul style="list-style-type: none">• Security Breaches: Security breaches occur when unauthorized access or violations of security protocols are detected or imminent, potentially compromising data or system integrity.

New ISO-IEC-27001-Foundation Exam Questions - Online ISO-IEC-27001-Foundation Tests

Computers are changing our life day by day. We can do many things on computers. Technology changes the world. If you have dream to be a different people, obtaining a APMG-International certification will be the first step. ISO-IEC-27001-Foundation learning materials will be useful for you. As you can see the Forbes World's Billionaires List shows people starting bare-handed are mostly engaging in IT field. ISO-IEC-27001-Foundation Learning Materials may be the first step to help you a different road to success.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

What is the definition of the term 'integrity' according to ISO/IEC 27000?

- A. The property of being accessible and usable
- **B. The property of accuracy and completeness**
- C. The property that information is NOT made available inappropriately
- D. The property of availability and confidentiality

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

According to ISO/IEC 27000:2018, Clause 3.35:

"Integrity is the property of accuracy and completeness."

This is one of the three core principles of information security (CIA triad):

* Confidentiality: ensuring information is not made available to unauthorized persons (related to option B).

* Integrity: ensuring data is accurate, complete, and unaltered except by authorized means.

* Availability: ensuring information is accessible and usable when required (related to option A).

Option D incorrectly mixes availability and confidentiality. The precise ISO definition is accuracy and completeness, which matches option C.

Thus, the correct verified answer is C.

NEW QUESTION # 40

Which audit activity related to ISO/IEC 27001 may be carried out by a practitioner?

- A. Conduct an audit of an Accredited Training Organization
- **B. Conduct an internal audit of the organization**
- C. Conduct a surveillance audit of their own area of the organization
- D. Conduct an audit of a Certification Body

Answer: B

Explanation:

ISO/IEC 27001 requires internal audits and sets out how they must be conducted: "The organization shall conduct internal audits at planned intervals..." (9.2.1) and "plan, establish, implement and maintain an audit programme(s)... [and] select auditors and conduct audits that ensure objectivity and the impartiality of the audit process" (9.2.2). These extracts confirm that practitioners (internal to the organization) can conduct internal audits provided objectivity and impartiality are ensured (e.g., they do not audit their own work). Surveillance audits (option A) and audits of Accredited Training Organizations or Certification Bodies (options C, D) are third-party activities outside the remit of an internal practitioner under ISO/IEC 27001; the standard's audit requirement is focused on the organization's own internal audit programme. Therefore, conducting an internal audit (B) is the correct practitioner activity per Clause 9.2.

NEW QUESTION # 41

Which trend in information security performance is required to be considered during a management review of the ISMS?

- A. Validity of information continuity controls

- B. Relevant external and internal requirements changes
- **C. Achievement of information security objectives**
- D. Decisions related to continual improvement opportunities

Answer: C

Explanation:

Clause 9.3.2 (Management Review Inputs) states that management reviews shall include:

"c) information on the information security performance, including trends in: (1) nonconformities and corrective actions; (2) monitoring and measurement results; (3) audit results; and (4) fulfilment of information security objectives." This makes achievement of information security objectives (option A) a required trend to be considered.

While external/internal requirements (C) and continual improvement opportunities (D) are also part of management review inputs, they are not specifically listed under "trends in performance." Option B is outside the direct requirement.

Thus, the verified answer is A.

NEW QUESTION # 42

What activity is done first when preparing for an initial certification audit?

- A. Provide records to the Certification Body auditor for the Stage 2 audit
- B. Provide evidence that nonconformities from an internal audit have been actioned
- C. Provide documents to the Certification Body auditor for the Stage 1 audit
- **D. Agree the scope of the ISMS with the Certification Body auditor**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27001:2022 standards and certification guidance:

Before a certification audit can begin, the scope of the ISMS must be clearly defined and agreed with the Certification Body.

ISO/IEC 27001 Clause 4.3 requires: "The scope shall be available as documented information." Certification Bodies require this scope statement to plan audit duration, resources, and coverage. Only after the scope is agreed does the Stage 1 audit begin, which reviews documented information and readiness. Stage

2 focuses on implementation and effectiveness. Evidence of corrective actions (C) is checked at Stage 2 if issues were identified earlier. Records provision (D) occurs during Stage 2, not first.

Thus, the first step in preparing for certification is A: Agreeing the scope of the ISMS with the Certification Body auditor.

NEW QUESTION # 43

Which information is required to be included in the Statement of Applicability?

- A. The criteria against which risk will be evaluated
- B. The risk assessment approach of the organization
- **C. The justification for including each information security control**
- D. The scope and boundaries of the ISMS

Answer: C

Explanation:

Clause 6.1.3 (d) requires that the organization "produce a Statement of Applicability that contains the necessary controls (see Annex A), and justification for inclusions, whether they are implemented or not, and the justification for exclusions." This is the defining requirement of the SoA: it documents which Annex A controls are relevant, which are implemented, and the justification for inclusion/exclusion. While the ISMS scope (A) is documented in Clause 4.3, and risk evaluation criteria (C) are defined in Clause 6.1.2, these do not belong in the SoA. The SoA does not describe the full risk assessment approach (B); that is part of the risk assessment methodology.

Therefore, the mandatory requirement for the SoA is justification for including (or excluding) each information security control.
