### CIPS Managing Ethical Procurement and Supply (L5M5) Sample Questions (Q80-Q85):

#### NEW QUESTION # 80

A company frequently ships high-value goods internationally, and the logistics team identifies a significant risk of financial loss due to potential cargo theft or damage during transit. To mitigate this risk, the company hires an external freight forwarder who provides insurance coverage and assumes full responsibility for the goods while in transit.

What is the most appropriate risk management strategy in this scenario?

- A. Treat
- B. Tolerate
- C. Terminate
- D. Transfer

**Answer: D**

Explanation:

Option B- By hiring the external freight forwarder with insurance coverage, the company shifts the responsibility and potential

financial loss to a third party. Thus, the correct answer is B.

Incorrect answer:

Option A- "Treat" involves taking action to mitigate the risk internally. For example, the company could implement its own security measures, such as using GPS tracking, enhanced packaging, or employing in-house logistics staff. In this scenario, the company is not mitigating the risk itself but instead transferring the responsibility to the freight forwarder.

Option C- The risk of theft or damage is significant in this scenario, and ignoring it would likely result in substantial financial losses. Hence, tolerating the risk is not a viable strategy.

Option D- Terminating the activity is not practical for the business, as shipping goods internationally is likely critical to operations. Instead, transferring the risk to the freight forwarder is a more reasonable approach.

### NEW QUESTION # 81

Which of the following are tools that a company can use to improve ethics and sustainability across the supply chain? Select THREE

- A. On-Site Audits
- B. Cost Analysis
- C. Supplier Preferencing
- D. Supply Chain Mapping
- E. Benchmarking

**Answer: A,D,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Documents:

The L5M5 study guide highlights several tools procurement can use to embed ethics and sustainability into supply chains. These include benchmarking (A), which compares practices against best-in-class organisations; supply chain mapping (C), which provides visibility of all tiers of suppliers to identify risks; and on-site audits (D), which verify supplier compliance with ethical standards directly. Supplier preferencing (B) is a portfolio analysis tool used to understand suppliers' perspectives, not specifically an ethical improvement tool. Cost analysis (E) is primarily financial and does not ensure ethical compliance. Procurement professionals must apply tools like mapping and audits to identify risks such as forced labour, environmental harm, or corruption.

### NEW QUESTION # 82

Which of the following are regarded as potential benefits of responsible procurement?

1. Reduction of staff retention for the organization
2. Enhanced business reputation and social improvements
3. Increased operational risks due to supplier diversity
4. Cost savings due to the application of lifecycle costing

- A. 1 and 2
- B. 2 and 4
- C. 4 and 1
- D. 2 and 3

**Answer: A**

Explanation:

Choice 2- Selecting sustainable good and services from responsible suppliers creates a positive reputation, and social improvements increase therefore a business attracts new customers.

Choice 4- Responsible procurement uses life cycle costing which considers the whole life span of a product rather than the initial purchase cost only. Thus is more cost effective because costs that arise throughout the product's life are also taken into account.

Incorrect answer:

Choice 1- Responsible procurement shows commitment to long term environmental and social issues which helps to retain employees and attract new employees. Employees want to be associated with such business which are investing in the future and makes employees more motivated. Therefore choice 1 is the wrong choice.

Choice 3- This is not a benefit. While engaging a diverse supplier base can introduce complexity, it typically enhances resilience rather than increasing risks.

### NEW QUESTION # 83

When a major garments factory faces adverse publicity due to alleged child labor, which of the following recognized techniques would be most effective in identifying the root cause of the issue?

- A. Supply chain mapping
- B. Value engineering
- C. Whole life costs
- D. Six sigma

**Answer: A**

Explanation:

Choice C - Supply chain mapping is a technique that enables a comprehensive analysis of the entire supply chain involved in the production and distribution of garment products. It helps identify the origin of the issue and how it spread. Therefore, it is the correct answer.

Incorrect answer:

Choice A - WLC is used to assess the total cost of an asset over its whole life, taking account of its initial cost and the cost of operation, maintenance, upgrade and disposal. It does not help in identifying the child labor issue.

Choice B - Value engineering is a method used to improve the value of a product or process, not primarily focused on issue identification.

Choice D- Six sigma is a methodology aimed at process improvement and reducing defects, not specifically tailored for issue identification.

### NEW QUESTION # 84

Ruben is buying new machinery for his factory. He chooses a more expensive option after considering ESG factors. Why might this be?

- A. In terms of life-cycle costing, the more expensive item may be cheaper in the long term
- B. The more expensive item will be more environmentally friendly
- C. The higher-priced item will be of better quality
- D. The higher-priced item is from a more reputable company

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Documents:

Procurement often considers Whole Life Cycle Costing (WLCC) rather than upfront cost alone. The L5M5 study guide (p.7) explains that while a product may be more expensive initially, it may be cheaper in the long term due to lower maintenance costs, greater durability, and reduced energy use. This approach supports sustainability by balancing financial and environmental impacts. Options A, B, and D cannot be assumed from the scenario since no evidence supports them. WLCC ensures procurement delivers long-term value, aligning with sustainability goals.
