Answer:

Explanation:

Explanation:

Box: Enterprise data protection (EDP)

Enterprise Data Protection (EDP) in Microsoft 365 Copilot is a set of security and privacy commitments designed to protect your organization's sensitive information.

Key protections provided by EDP include:

**No AI Training:** Your prompts, Copilot's responses, and any data accessed via Microsoft Graph (like emails, files, and chats) are not used to train Microsoft's foundational large language models (LLMs).

**Tenant Isolation:** Your data stays within the Microsoft 365 service boundary and is logically isolated from other organizations' data.

**Respects Permissions:** Copilot inherits your organization's existing access controls and Microsoft Purview sensitivity labels, ensuring users only see data they are already authorized to access.

**Compliance Standards:** It adheres to major regulatory standards, including GDPR, ISO/IEC 27018, and the Microsoft Data Protection Addendum (DPA).

**Secure Web Queries:** Even when using web grounding via Bing, queries are de-identified and handled separately to maintain your privacy.

#### NEW QUESTION # 105

In a Microsoft 365 Copilot conversation, you generate a report, and then edit the report in a page. You need to collaborate with a colleague on the report.

What are two ways to achieve the goal?

- A. Open the page in Microsoft Word.
- B. Add the page to a notebook.
- C. Share the page link.
- D. @mention the colleague in the page.

**Answer: C,D**

Explanation:

Microsoft 365 Copilot Pages supports collaboration similarly to other Microsoft 365 documents. Collaboration requires notifying or granting access to colleagues.

Using @mentions within the page (Option A) directly notifies the colleague and facilitates collaborative engagement. Sharing the page link (Option D) allows others to access and edit the content according to permissions. These two methods provide complete collaboration workflows.

Adding the page to a notebook does not grant collaborative access. Opening the page in Word changes the editing surface but does not inherently enable collaboration unless shared.

Therefore, the correct answers are A and D.

#### NEW QUESTION # 106

You attend many Microsoft Teams meetings.

You want to ensure that you can catch up on key points and next steps after each meeting.

Which Microsoft 365 Copilot feature should you use after the meetings?

- A. Meeting Whiteboard
- B. Thread summaries
- C. Meeting info
- D. Recap

**Answer: D**

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation Microsoft AI Business professional documents:

After a Microsoft Teams meeting ends, the Microsoft 365 Copilot feature designed specifically to help you catch up on what happened-including key discussion points, decisions, and next steps-is Recap (often referred to as intelligent recap). Recap aggregates post-meeting artifacts such as the recording, transcript, and AI-generated insights, and surfaces actionable items so attendees can quickly understand outcomes without rewatching the full meeting. This aligns directly with the requirement to review "key points and next steps" after each meeting.

Meeting Whiteboard is a collaborative canvas used during meetings for brainstorming and sketches; it does not automatically produce a structured summary of decisions and actions. Meeting info provides logistical details (participants, agenda, attachments) rather than a synthesized outcomes summary. Thread summaries focus on chat or channel message threads, not the meeting's recorded and transcribed content.

Therefore, to consistently catch up on key points and next steps after meetings, the correct Copilot feature to use is Recap.
