# 100% Pass 2026 Salesforce High-quality Plat-Dev-301 Latest Test Dumps

Our Plat-Dev-301 exam simulation is selected many experts and constantly supplements and adjust our questions and answers. When you use our Plat-Dev-301 study materials, you can find the information you need at any time. When we update the Plat-Dev-301 preparation questions, we will take into account changes in society, and we will also draw user feedback. If you have any thoughts and opinions in using our Plat-Dev-301 Study Materials, you can tell us. We hope to grow with you and the continuous improvement of Plat-Dev-301 training engine is to give you the best quality experience.

For candidates who want to pass the exam just one time, the valid Plat-Dev-301 study materials are quite necessary. We are a professional exam materials provider, and we can offer you valid and effective Plat-Dev-301 exam materials. In addition, we have a professional team to collect the latest information for the exam, and if you choose us, we can ensure you that you can get the latest information for the exam. We offer you free update for one year for Plat-Dev-301 stidy materials, and the latest version will be sent to your email automatically. If you have any questions, you can consult our online chat service stuff.

Knowledge Plat-Dev-301 Points | Plat-Dev-301 Training Pdf

Our Plat-Dev-301 practice dumps are so popular that all our customers are giving high praise on its high-quality to help them pass the exams. Numerous of warming feedbacks from our worthy customers give us data and confidence. We have clear data collected from customers who chose our Plat-Dev-301 training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our Plat-Dev-301 exam questions!

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q138-Q143):

NEW QUESTION # 138
Users report that a button on a custom Lightning web component (LWC) is not saving the data they enter. The button looks to be clicked, but the LWC simply sits there, seemingly doing nothing.

What should the developer use to ensure error messages are properly displayed?

- A. Add the <apex:messages/> tag to the component.
- B. Use the Database method with a110rNone Set to false.
- C. Add a try-catch block surrounding the DML statement.
- D. Add JavaScript and HTML to display an error message.

Answer: D

Explanation:
To ensure error messages are properly displayed in a Lightning web component, the developer should use JavaScript to handle errors in the component's client-side code and use HTML to display the message on the UI. This can be combined with Apex exception handling for server-side operations.

NEW QUESTION # 139
A developer implemented a custom data table in a Lightning web component with filter functionality. However, users are submitting support tickets about long load times when the filters are changed. The component uses an Apex method that is called to query for records based on the selected filters.
What should the developer do to improve performance of the component?

- A. Use a selective SOQL query with a custom Index.
- B. Use SOSL to query the records on filter change.
- C. Return all records into a list when the component is created and filter the array In JavaScript.
- D. Use setstoraclel() in the Apex method to store the response In the client-side cache.

Answer: A

Explanation:
When faced with performance issues in a Lightning Web Component (LWC) due to SOQL query load times, the optimal approach is often to improve the query's selectivity. This can be achieved by using a selective SOQL query with a custom index. Salesforce can create custom indexes to improve the performance of queries that cannot be optimized through standard indexing. When a query is selective, it can efficiently retrieve records from the database using the index, thus reducing the query execution time and speeding up the component's performance when filters are changed. The other options (returning all records, using SOSL, or client-side caching) do not directly address the root cause of the performance issue, which is the need for a more efficient database operation.
Make SOQL Query Selective
Use of Indexes in SOQL Queries

NEW QUESTION # 140
A developer is building a Lightning web component that searches
for Contacts. The component must communicate the search
results to other unrelated Lightning web components, that are in
different DOM trees, when the search completes.
What should the developer do to implement the communication?

- A. Fire a custom component event.
- B. Publish an event on an event channel.
- C. Publish a message on a message channel.
- D. Fire an application event.

Answer: C

Explanation:
For communication between unrelated Lightning web components that are in different DOM trees, the most suitable approach is to use the Lightning Message Service (LMS). This service allows components to communicate with each other using a message channel, which is particularly useful when the components are not in the same containment hierarchy. By publishing and subscribing to messages on a message channel, components can exchange data and notifications, which is ideal for the scenario described.
Lightning Web Components Developer Guide - Communicate Across the DOM with Lightning Message Service

NEW QUESTION # 141

Which code snippet processes records in the most memory efficient manner, avoiding governor limits such as "Apex heap size too large"?

A)

B) C)

D)

- A. Option C
- B. Option D
- C. Option B
- D. Option A

Answer: B

Explanation:

Option D, which uses the Database.query() method in combination with a for loop, is the most memory-efficient way to process records. This is known as the Query Locator pattern, which allows you to work with a large number of records by querying them in batches. This approach helps to avoid hitting the governor limit for "Apex heap size too large" as it processes one record at a time from the database without storing the entire result set in memory.

Working with Very Large SOQL Queries

Apex Governor Limits

NEW QUESTION # 142

Which method should be used to convert a Date to a String in the current user's locale?

- A. String.format
- B. Date.paras
- C. String.valueof
- D. Date. format

Answer: D

Explanation:

The format method of the Date class is used to convert a Date to a String formatted in the current user's locale. This respects the locale settings of the user context under which the code is running, ensuring the date is represented in a way that is familiar to the user.
