

2026 Trustable 2V0-15.25 Training Material | 100% Free 2V0-15.25 Test Sample Online

What's more, part of that Pass4Test 2V0-15.25 dumps now are free: <https://drive.google.com/open?id=1cI08KdiRxVJJ7KWjfmKWaxwZ7baKPgMs>

These VMware 2V0-15.25 updated dumps are launched in the market after suggestions from experienced professionals. Therefore, this VMware 2V0-15.25 exam study material is kept to the point and concise. The VMware 2V0-15.25 practice material for Exams. Choice are essential for your successful learning. Often applicants for the exam run on a tight daily schedule before the final VMware 2V0-15.25 Exam, so actual VMware Cloud Foundation 9.0 Support exam questions are fruitful to prepare successfully on the first try.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.
Topic 2	<ul style="list-style-type: none">Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 3	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
Topic 4	<ul style="list-style-type: none">IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.

- Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.

2V0-15.25 Test Sample Online, Valid 2V0-15.25 Test Review

There are a lot of experts and professors in our company. All 2V0-15.25 study torrent of our company are designed by these excellent experts and professors in different area. We can make sure that our VMware 2V0-15.25 test torrent has a higher quality than other study materials. The aim of our design is to improving your learning and helping you gains your VMware Cloud Foundation 9.0 Support 2V0-15.25 Certification in the shortest time. If you long to gain the certification, our VMware Cloud Foundation 9.0 Support guide torrent will be your best choice.

VMware Cloud Foundation 9.0 Support Sample Questions (Q26-Q31):

NEW QUESTION # 26

An administrator has observed that the vSphere Global Inventory is only available from the management domain vCenter. The Global Inventory is not available from the workload domain's vCenter.

Why is the "Global Inventory" missing from the workload domain's vCenter?

- A. An external VIDB instance has not been configured.
- B. An inventory sync was not run following the workload domain creation.
- C. Supervisor Management has not been enabled.
- D. VCF SSO and vCenter Linking have not been configured.

Answer: D

Explanation:

The Global Inventory List (GIL) is only available when multi-vCenter SSO domain linking is configured. In VMware Cloud Foundation, the management domain vCenter is deployed first and becomes the root vCenter for global inventory data. For workload domains, their vCenter Servers must be registered into the same SSO domain and linked with the management-domain vCenter in order for the global inventory data (VMs, hosts, clusters, content libraries) to appear.

If a workload domain vCenter is not SSO-linked, it operates in its own identity domain, and therefore cannot access or present Global Inventory, resulting in exactly the symptom described: the management domain vCenter shows the GIL, while the workload domain vCenter does not.

Option B (Supervisor Management) relates to vSphere with Tanzu and has no impact on Global Inventory.

Option C (inventory sync) is incorrect—there is no manual sync required; GIL relies entirely on SSO linking.

Option D (VIDB) is not related to vCenter linking or inventory visibility; it is used by VCF Identity Broker.

Therefore, the reason the Global Inventory is missing from the workload domain vCenter is that SSO/vCenter Linking has not been configured, which is required for federation across all VCF vCenters.

NEW QUESTION # 27

An administrator recently deployed a new three-node VMware vSAN Express Storage Architecture (ESA) cluster to an existing workload domain. After creating a number of Virtual Machines (VMs), the administrator discovers that storage is being consumed a lot quicker than expected.

While investigating the issue, the administrator discovers that the datastore default policy has been set to RAID-1 by Auto-Policy Management rather than the expected RAID-5.

What is a possible cause?

- A. The RAID-5 policy is only supported on a vSAN ESA storage cluster.
- B. The vSAN storage policy has Force Provisioning enabled.
- C. The vSAN ESA cluster has Host Rebuild Reserved enabled.
- D. The vSAN ESA cluster must have a minimum of four hosts.

Answer: D

Explanation:

In vSAN Express Storage Architecture (ESA), Auto-Policy Management determines which default storage policies can be used based on the number of hosts in the cluster. RAID-5 and RAID-6 policies require a minimum number of hosts to satisfy fault domain and component placement rules.

For vSAN ESA, the minimum hosts required are:

- * RAID-1 (FTT=1) # minimum 3 hosts
- * RAID-5 (FTT=1) # minimum 4 hosts
- * RAID-6 (FTT=2) # minimum 6 hosts

In this scenario, the administrator deployed a three-host ESA cluster. Since RAID-5 requires at least four ESA-capable hosts, vSAN Auto-Policy Management automatically falls back to RAID-1, the highest level of resilience possible with the available cluster size.

This results in significantly higher storage consumption, which matches exactly what the administrator observed.

Option A is incorrect because RAID-5 is fully supported on ESA-but only with enough hosts.

Option C (Force Provisioning) does not change the default policy selected.

Option D (Host Rebuild Reserve) does not control RAID policy selection.

NEW QUESTION # 28

A user attempts to deploy a catalog item into a vSphere Namespace in a VMware Cloud Foundation (VCF) Automation Organization for All Apps. The catalog item will not deploy into zone3.

The following information is provided:

- * The vSphere Supervisor has three zones (zone1, zone2, zone3).
- * The user has successfully deployed the catalog item into zone1 and zone2 of the vSphere Namespace.

What is the cause of this issue?

- A. The user does not have the Project User role for the vSphere Namespace.
- **B. The vSphere Namespace does not include zone3.**
- C. The vSphere Namespace is assigned the default large vSphere Namespace Class.
- D. The user does not have Project Advanced User role for the vSphere Namespace.

Answer: B

Explanation:

In VMware Cloud Foundation (VCF) Automation for All Apps, a vSphere Namespace can span multiple Supervisor Zones. However, workloads—including catalog item deployments—can only be deployed into zones that are explicitly assigned to that Namespace. The user in the scenario successfully deploys into zone1 and zone2, which confirms that those zones are correctly associated with the Namespace.

The failure to deploy into zone3, while deployments into the other zones work, strongly indicates that zone3 is not part of the Namespace configuration.

This behavior matches how Supervisor Zones function:

- * A zone must be added to the Namespace in Supervisor configuration.
- * If the zone is not associated, VCF Automation will not present it as an eligible deployment location, and deployment into that zone fails.

Option A and D (project roles) are incorrect because insufficient permissions would prevent deployment into any zone, not a single missing zone.

Option B (Namespace Class) is irrelevant because Namespace Classes define resource limits, not which Supervisor Zones the Namespace is mapped to.

NEW QUESTION # 29

An administrator is tasked to add a new host to a vSphere cluster that was created with VMware vSAN Express Storage Architecture (ESA) as its principal storage in an existing workload domain.

The administrator successfully commissions the new host with a VMware vMotion only network pool but is unable to add the host to the existing cluster.

What must the administrator do to be able to complete this task?

- **A. Change the network pool associated to the new host to the network pool for the existing vSAN ESA cluster.**
- B. Manually configure the vSAN network on the new host within vCenter.
- C. Reconfigure the currently associated network pool with a vSAN network.
- D. Decommission, reinstall ESX, and recommission the new host to the network pool for the existing vSAN ESA cluster.

Answer: A

Explanation:

In VCF 9.0, when adding a host to a vSAN ESA-enabled cluster, the host must be commissioned with a network pool that includes a vSAN network configuration. Network pools define host-level networking templates for VCF, including management, vSAN, vMotion, and overlay networks. A host commissioned with a vMotion-only network pool does not have the required vSAN ESA network interfaces (vmk + NIC mapping) to join an ESA cluster.

Because the administrator successfully commissioned the new host but only using a vMotion-only network pool, VCF correctly prevents the host from being added to the ESA cluster.

The required action is:

Reassociate the host with the correct network pool that includes the vSAN ESA network.

Option A (reinstall ESXi) is unnecessary; commissioning workflows can be redone.

Option C (manual vCenter configuration) is explicitly unsupported- VCF manages host networking.

Option D (reconfiguring the existing pool) is not correct because the new host must be associated with the same network pool used by the existing ESA cluster, not change the pool definition itself.

Therefore, the precise and VMware-documented resolution is B.

NEW QUESTION # 30

A user wishes to publish a VMware Cloud Foundation (VCF) Operations Orchestrator workflow to their VCF Automation project catalog, but is blocked from publishing any workflows.

The following information has been provided:

* In the VCF Automation Organization portal, the user cannot see the Workflows option under Content Hub.

* The organization is not a Provider Consumption Organization.

Which are the two likely causes of this issue? (Choose two.)

- A. The user is logged in with Project Advanced User rights
- B. The user is logged in with Project Administrator rights.
- C. An external VCF Operations Orchestrator is not integrated with their Organization.
- D. The user is logged in with Project User rights.
- E. An embedded VCF Operations Orchestrator is not integrated with their Organization.

Answer: C,E

Explanation:

In VMware Cloud Foundation 9.0, publishing a VCF Operations Orchestrator workflow to a VCF Automation project catalog requires that the Organization has a valid integration with VCF Operations Orchestrator. The question states that the user cannot see the Workflows option under Content Hub, and the organization is not a Provider Consumption Organization (PCO). According to the VCF 9.0 documentation, only organizations with VCF Operations Orchestrator integration are allowed to publish workflows into the catalog. Both embedded and external orchestrator integrations must be configured depending on the environment. If no orchestrator (embedded or external) is integrated with the organization, workflows cannot be listed or published. This aligns with the documented VCF Automation and VCF Operations Orchestrator design requirements, which specify that workflow publishing is only available when the orchestrator instance is properly registered.

Additionally, user role permission issues could prevent workflow visibility, but the key blockers described in the scenario are the missing workflow section and the organization type. Because the organization is not a PCO, advanced provider features-including workflow publishing-are disabled unless a proper orchestrator integration exists. Therefore, the two most likely causes are:

* A: An external VCF Operations Orchestrator is not integrated with their Organization.

* D: An embedded VCF Operations Orchestrator is not integrated with their Organization.

These two conditions directly match the documented behavior in VMware Cloud Foundation 9.0.

NEW QUESTION # 31

.....

Pass4Test always provides customer support for the convenience of desktop VMware 2V0-15.25 practice test software users. The VMware 2V0-15.25 certification provides both novices and experts with a fantastic opportunity to show off their knowledge and proficiency in carrying out a particular task. You can benefit from a number of additional benefits after completing the VMware 2V0-15.25 Certification Exam.
