Juniper JN0-1103 考試大綱：

主題	簡介
主題 1	• Data Center Network Design: This section of the exam measures skills of Data Center Network Engineers and covers considerations for general data center network design. Topics include data center design best practices, understanding traffic patterns, virtual chassis implementation, and environmental considerations. The section also delves into data center fabric architectures, benefits of IP fabric over traditional architectures, spine-and-leaf device placement, underlay and overlay design, routing protocol selection, and best practices for IP fabric scaling.
主題 2	• Network Management or Reliability: This section of the exam measures skills of Network Operations Center (NOC) Engineers and covers design considerations for ensuring business continuity. Topics include high-resiliency design, implementing link and device-level redundancy, and utilizing technologies like Multihomed Ethernet Segment Identifier Link Aggregation Groups (ESI LAGs) and virtual chassis. The section also explores Juniper SRX firewall redundancy and best practices for campus network redundancy.

主題 3	• Customer Network Design Requirements: This section of the exam measures skills of Network Design Engineers and covers the foundational aspects of network design. It includes understanding Juniper's life-cycle service approach, defining proposal boundaries, and considerations for both greenfield and brownfield deployments. The section also addresses top-down network design methodologies and capacity planning to ensure scalable and efficient network infrastructures.

最新的 Design Track Certification JN0-1103 免費考試真題 (Q64-Q69):

問題 #64

Which two statements are correct in regards to creating a successful network design for a customer?
(Choose two.)

- A. You should only consider greenfield network designs.
- **B. You should understand the state of the customer's current network.**
- C. You should only consider brownfield network designs.
- **D. You should analyze current and future network behavior.**

答案：B,D

問題 #65

What should be the third item in your network design checklist?

- **A. The steps for designing a network topology.**
- B. A validation process for analyzing customer's existing environment.
- C. A process for selecting protocols, address schemes, naming conventions, and so forth.
- D. A process for understanding the customer's business and technical goals.

答案：A

問題 #66

A local university has decided to expand their research capabilities and build a new research facility.

You have been hired to design and install the new network in this building.

The research team expects to generate massive amounts of data, which must be shared with other facilities located on the same campus. Physical access to the building is restricted, and the connection to the other buildings is private and direct.

What is your primary concern in the design of the network?

- A. encryption
- B. scalability
- C. resiliency
- **D. security**

答案：D

問題 #67

Which statement is true about 3-stage IP fabrics?

- A. There must be physical connections between all of the leaf nodes.
- **B. Each leaf node must have at least one physical connection to each spine node.**
- C. There must be physical connections between all of the spine nodes.
- D. Each leaf node must have at least two physical connections to each spine node.

答案: B

解題說明:

In a 3-stage IP fabric, each leaf node must connect to every spine node to ensure full mesh connectivity at Layer 3 between leafs via the spine layer. This design supports ECMP and optimal traffic distribution across the fabric.

問題 #68

Connectivity issues have been seen by the users in remote offices when attempting to access resources at the corporate headquarters. You must design a fix for this issues.

Which technology should you include in your design?

- A. accelerated WAN links
- B. hub-and-spoke VPN
- C. auto-discovery VPN
- **D. redundant WAN links**

答案: D
