

Wir machen C_BCBTP_2502 leichter zu bestehen!

Wünschen Sie nicht großen Erfolg in Ihrem Arbeitsleben machen? Wenn ja, sollen Sie jetzt sich verbessern. Und wie kann Ihre selbe Fähigkeit in IT-Industrie sich verbessern? Es ist eine gute Weise, die SAP C_BCBTP_2502 Zertifizierungsprüfung abzulegen. Die SAP Zerifizierungsprüfung ist eine sehr wichtige Zertifizierung, deshalb gibt es immer mehr SAP Prüfungskandidaten.

SAP C_BCBTP_2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

Thema 2	• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite cexamkiller Praxis Dumps & C_BCBTP_2502 Test Training Überprüfungen

Mit der Entwicklung der IT-Industrie nimmt die Zahl der IT-Lerner seit Jahren immer zu. Das führt zu immer stärkeren Konkurrenzen. Und es ist undenkbar, dass Sie in IT-Industrie von anderen überschritten sind. Deshalb sollen Sie Ihre Fähigkeit ständig erhöhen und Ihre Stärke zu anderen beweisen. Wie können Sie Ihre Fähigkeit zu anderen beweisen? Immer mehr Leute wählen IT-Zertifizierungen, Ihre Fähigkeit zu beweisen. Wollen Sie auch? Kommen Sie zuerst zu SAP C_BCBTP_2502 Zertifizierungsprüfung. Das ist die wichtigste SAP Prüfung und auch von vielen Unternehmen anerkannt.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite C_BCBTP_2502 Prüfungsfragen mit Lösungen (Q35-Q40):

35. Frage

How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By restricting integration with external systems.
- B. By requiring all applications to be developed from scratch.
- **C. By providing low-code/no-code development tools.**
- D. By limiting customization to SAP standard functionalities.

Antwort: C

Begründung:

A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.

These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud era.

36. Frage

Which SAP BTP service enables businesses to orchestrate and monitor enterprise-wide workflows?

- A. SAP Ariba
- B. SAP Business Network
- **C. SAP Workflow Management**
- D. SAP Conversational AI

Antwort: C

Begründung:

In the context of the Intelligent Enterprise, business processes often span multiple departments and different software systems. SAP Workflow Management (now largely integrated into the SAP Build Process Automation suite) is the specific BTP service designed to bridge these gaps. It allows organizations to digitize, manage, and operate business processes with high levels of transparency. The service provides a centralized platform to define process flows, set approval limits, and ensure that tasks are routed to the correct stakeholders in a timely manner.

The importance of this service lies in its ability to provide "live process visibility." Unlike traditional siloed workflows, SAP Workflow Management on BTP can pull data from various SAP Business Suite components-like Finance, Procurement, or HR-to create an end-to-end view of a business operation. This orchestration is critical for identifying bottlenecks and improving operational efficiency. While SAP Business Network and SAP Ariba facilitate external collaboration and procurement respectively, they do not provide the underlying technical framework for custom workflow orchestration across the entire enterprise landscape.

By utilizing BTP's workflow capabilities, companies can achieve a higher level of automation and governance, ensuring that business rules are consistently applied across all digital touchpoints, whether the underlying systems are cloud-based or on-premise.

37. Frage

Which of the following are key features of SAP BTP's Integration Suite? (Choose two).

- A. Manual data processing with no automation.
- **B. Prebuilt connectors for SAP and third-party applications.**
- C. Restricted integration to SAP-only services.
- **D. Built-in API management for secure data exchange.**

Antwort: B,D

Begründung:

The SAP Integration Suite is designed to handle the complexities of a hybrid and heterogeneous IT landscape.

One of its most significant features is the availability of thousands of prebuilt connectors and integration flows for both SAP and third-party applications (such as Salesforce, ServiceNow, and various government portals). These "accelerators" significantly reduce the time and cost associated with integration projects, as developers do not have to build connections from scratch. This allows businesses to achieve a faster "time-to-value" when expanding their digital ecosystem.

Another critical feature is built-in API management. As enterprises move toward microservices and cloud-native applications, the number of APIs (Application Programming Interfaces) increases exponentially. SAP Integration Suite provides a centralized layer to govern, secure, and monitor these APIs. This ensures that data exchange between systems is not only efficient but also highly secure, protecting the enterprise from unauthorized access or data breaches. By combining prebuilt content with robust API governance, SAP BTP enables organizations to create a "composable enterprise" where different systems can be easily connected and reconfigured to meet changing business needs, moving away from the rigid, manual processes of the past.

38. Frage

What is a key advantage of SAP BTP for the automotive industry?

- A. Restricts automation in supply chain management.
- **B. Supports connected vehicle ecosystems with IoT and AI.**
- C. Eliminates AI applications in predictive maintenance.
- D. Prevents data-driven innovations in vehicle manufacturing.

Antwort: B

Begründung:

The automotive industry is undergoing a massive shift from traditional manufacturing to "Mobility-as-a-Service." SAP BTP is central to this shift because it supports connected vehicle ecosystems with IoT and AI.

. By integrating telematics data from vehicles directly into the SAP Business Suite via SAP BTP, manufacturers can monitor vehicle performance in real-time. This enables "Predictive Maintenance," where the system identifies a potential part failure before it happens, automatically alerts the driver, and schedules a service appointment at the nearest dealership.

Beyond the vehicle itself, SAP BTP enhances the entire automotive value chain. It uses the Integration Suite to connect manufacturers with a vast network of tier-one and tier-two suppliers, ensuring that the "Just-in-Time" (JIT) production model remains resilient against global disruptions. Additionally, SAP Analytics Cloud on BTP allows automotive companies to analyze consumer trends and driving patterns to inform the design of future electric and autonomous vehicles. This transformation positions SAP BTP not just as an IT platform, but as a core business driver that enables automotive companies to innovate at the speed of software while maintaining the high safety and quality standards required in vehicle manufacturing.

39. Frage

Which SAP BTP component supports microservices-based application development?

- A. SAP Kyma Runtime
- B. SAP Business Network
- C. SAP SuccessFactors
- D. SAP Concur

Antwort: A

Begründung:

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services-such as a custom loyalty engine or a unique logistics tracker-using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.

40. Frage

.....

Um die Bedürfnisse von den meisten IT-Fachleuten abzudecken, haben das Expertenteam die Prüfungsthemen in den letzten Jahren studiert. So kommen die zielgerichteten Fragen und Antworten zur SAP C_BCBTP_2502 Zertifizierungsprüfung vor. Die Ähnlichkeit unserer Dumps mit den echten Prüfung beträgt 95%. ExamFragen wird Ihnen helfen, die SAP C_BCBTP_2502 Prüfung 100% zu bestehen. Sonst erstatten wir Ihnen die gesamte Summe zurück. Sie können im Internet die Demo zur SAP C_BCBTP_2502 Zertifizierungsprüfung kostenlos herunterladen, so dass Sie die Zuverlässigkeit unserer Produkte testen können. Schicken Sie doch die Produkte von ExamFragen in den Warenkorb. ExamFragen wird Ihren Traum verwirklichen.
