How to Pass the 400-007 Exam: Best Preparation Tips & Dumps

The Cisco 400-007 exam is a crucial certification test for IT professionals looking to advance their networking careers. With its challenging questions and broad syllabus, proper preparation is essential to ensure success. One effective study strategy involves using **400-007 dumps**, which provide real exam questions and answers for better understanding. In this blog, we will explore the best ways to prepare for the exam, the role of dumps in your study plan, and tips to maximize your chances of passing.

Understanding the Cisco 400-007 Exam

The 400-007 exam is part of Cisco's certification pathway for network engineers, focusing on advanced networking concepts, including:

- Network design principles
- Network security

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q360-Q365):

NEW QUESTION # 360

Router R1 is a BGP speaker with one peering neighbor over link "A". When the R1 link/interface "A" fails, routing announcements are terminated, which results in the tearing down of the state for all BGP routes at each end of the link. What is this a good example of?

- A. redundancy
- B. resiliency
- C. fault isolation
- D. **fate sharing**

Answer: D

NEW QUESTION # 361

VPLS is implemented in a Layer 2 network with 2000 VLANs. What is the primary concern to ensure successful deployment of VPLS?

- A. The underlying transport mechanism
- B. VLAN scalability
- C. **PE scalability**
- D. Flooding is necessary to propagate MAC address reachability information

Answer: C

NEW QUESTION # 362

An enterprise solution team is analyzing multilayer architecture and multicontroller SDN solutions for multisite deployments. The analysis focuses on the ability to run tasks on any controller via a standardized interface. Which requirement addresses this ability on a multicontroller platform?

- A. **Use the East-West API to facilitate replication between controllers within a cluster.**
- B. Build direct physical connectivity between different controllers.
- C. Deploy a root controller to gather a complete network-level view.
- D. Use OpenFlow to implement and adapt new protocols.

Answer: A

Explanation:

* B (East-West API between controllers): In multicontroller SDN architectures, East-West APIs allow controllers to synchronize state, policies, and tasks, enabling distributed control while presenting a unified control plane view. This ensures that tasks can be performed on any controller consistently.

Other options explained:

* A: Root controllers are not standard in modern SDN distributed architectures.

* C: Physical connectivity alone doesn't synchronize state or tasks.

* D: OpenFlow governs switch forwarding, not controller-to-controller interaction.

NEW QUESTION # 363

Identity and access management between multiple users and multiple applications has become a mandatory requirement for Company XYZ to fight against ever-increasing cybersecurity threats. To achieve this, federated identity services have been deployed to provide Single Sign-On and Multi-Factor Authentication.

Which protocol can be used by Company XYZ to provide authentication and authorization services?

- **A. SAML2.0**
- B. OpenID
- C. OAuth2
- D. OpenID Connect

Answer: A

Explanation:

* D (SAML2.0): SAML2.0 is widely used for federated identity management in enterprise environments, supporting Single Sign-On (SSO) across multiple applications and domains.

Other options explained:

* A: OAuth2 is primarily for authorization, not identity federation.

* B: OpenID Connect extends OAuth2 for authentication but is more common for consumer web apps than enterprise SSO.

* C: OpenID is older and largely replaced by OpenID Connect.

NEW QUESTION # 364

The first step to a resilient network is to have a clear strategy for how to achieve it and consider that simplicity modularity, and security play important roles. What is critically important to understand thoroughly while you build a resilient IP network?

- A. device speed impacting data plane protocols
- B. choice of the device speed to build the network
- C. high-performance feature of the hardware
- **D. factors affecting the performance of the network**

Answer: D
