## Most Platform-App-Builder Reliable Questions | Training Platform-App-Builder Pdf

Up to now, there are three versions of Platform-App-Builder exam materials for your choice. So high-quality contents and flexible choices of Platform-App-Builder learning mode will bring about the excellent learning experience for you. Though the content of these three versions of our Platform-App-Builder study questions is the same, their displays are totally different. And you can be surprised to find that our Platform-App-Builder learning quiz is developed with the latest technologies as well.

Salesforce Certified Platform App Builder certification is an excellent choice for individuals who want to demonstrate their expertise in building custom applications on the Salesforce platform. Salesforce Certified Platform App Builder certification is recognized by employers and clients around the world and is a valuable credential for anyone looking to advance their career in Salesforce development or administration.

## Salesforce Certified Platform App Builder Sample Questions (Q108-Q113):

### NEW QUESTION # 108

After a deal is closed, Cloud Kicks (CK) wants to assign a user as a customer service manager (CSM) in addition to the account

owner and would like a new field to easily track and report which CSM is assigned to the Account. Which solution should an app builder use for this request?

- A. Picklist field
- **B. Lookup field**
- C. Multi-select picklist Meld
- D. Text field

**Answer: B**

Explanation:

The solution that an app builder should use for this request is a lookup field. A lookup field is a type of relationship field that links two objects together and allows users to select a record from another object. The app builder can create a lookup field on the account object that references the user object and allows users to assign a customer service manager (CSM) to the account. Option A is incorrect because a multi-select picklist field is not suitable for this request, as multi-select picklist fields allow users to select multiple values from a predefined list, not from another object. Option B is incorrect because a picklist field is not suitable for this request, as picklist fields allow users to select one value from a predefined list, not from another object. Option D is incorrect because a text field is not suitable for this request, as text fields allow users to enter any alphanumeric characters, not from another object.

#### **NEW QUESTION # 109**

An App Builder at UVC would like to prevent users from creating new records on an Account related list by overriding standard buttons. Which two should the App Builder consider before overriding standard buttons?

- **A. Standard buttons that are not available for overrides can still be hidden on page layouts**
- B. Standard buttons can be changed on lookup dialogs, list views, and search result layouts
- **C. Standard buttons can be overridden with a Visualforce page**
- D. Standard buttons can be overridden, relocated on the detail page, and relabeled

**Answer: A,C**

Explanation:

Standard buttons can be overridden with a Visualforce page to provide custom functionality or user interface. For example, you can override the New button on an object to display a custom Visualforce page instead of the standard page layout3. Standard buttons that are not available for overrides can still be hidden on page layouts to prevent users from accessing them. For example, you can hide the Delete button on an object to prevent users from deleting records

#### **NEW QUESTION # 110**

Which two report formats can be used as a source report to configure a reporting snapshot? (Choose two.)

- A. Joined format
- **B. Summary format**
- C. Matrix format
- **D. Tabular format**

**Answer: B,D**

#### **NEW QUESTION # 111**

What may occur if workflow rules are reevaluated after a field change by a field update?

- A. Workflow rules trigger validation rules on field updates.
- **B. A recursive loop potentially results in exceeding organizational limits.**
- C. Cross-object workflow rules result in re-evaluation after field change.
- **D. Workflow rules trigger more workflow rules to be re-evaluated.**

**Answer: B,D**

## NEW QUESTION # 112

An app builder at Cloud Kicks created a custom object and related fields in the schema builder. What next steps should the app build take to ensure users can access the new object and fields?

- A. Assign data types to the fields on the object.
- B. Create a permission set for access to the object and fields.
- C. Add the fields to the page layout on the object.
- D. Allow reporting for the object and fields.

**Answer: C**

## NEW QUESTION # 113

Our Platform-App-Builder learning materials will aim at helping every people fight for the Platform-App-Builder certificate and help develop new skills.
