NEW QUESTION # 30

Which authentication option can you not configure under config user radius on FortiOS?

- A. mschap2
- B. eap
- C. mschap
- D. pap

Answer: B

Explanation:

According to the official Fortinet administration guide for FortiOS 7.6.4 under the section "Configuring a RADIUS server," the supported RADIUS authentication methods you can configure via the CLI with config user radius are:

- * pap
- * chap
- * mschap
- * mschapv2
- * auto

The relevant CLI syntax is set auth-type {auto | ms_chap_v2 | ms_chap | chap | pap}. You can confirm this directly in the configuration table and from real CLI sessions.

EAP (Extensible Authentication Protocol) is NOT an authentication option you can directly set under config user radius. EAP methods (such as EAP-TLS, EAP-PEAP, EAP-TTLS) are negotiated between the RADIUS client and server but are not configurable as an explicit auth-type option in FortiOS. EAP authentication is typically used automatically by features like 802.1X, not through the user radius object authentication-type setting, and always requires proper backend workings between supplicant and RADIUS server

NEW QUESTION # 31

Refer to the exhibit showing a debug output.

```
# diagnose debug application authd 8256
# diagnose debug enable
....
[fsae_server_init_spec:116]: num 1, idx 0, 127.0.0.1:8000 disconnect_server_only
[FSSO]: disconnecting_event_error[Local FSSO Agent]: error occurred in read: Connection refused
....
```

An administrator deployed FSSO in DC Agent Mode but FSSO is failing on FortiGate. Pinging FortiGate from where the collector agent is deployed is successful.

The administrator then produces the debug output shown in the exhibit.

What could be causing this error message?

- A. The FortiGate and the collector agent are using different TCP ports.
- B. The collector agent preshared password is mismatched.
- C. The TCP port 445 is blocked between FortiGate and collector agent.
- D. The FortiGate cannot resolve the active directory server name.

Answer: A
