CDFOM英語版 & CDFOM模擬資料

IT業界で仕事している皆さんはIT認定試験の資格の重要性をよく知っているでしょう。IT認定試験には多くの種類があります。現在最も人気がある試験もいろいろあります。例えばCDFOM認定試験などです。その中の試験、どちらを受験しましたか。もし一つの認証資格を持っていないなら、IT認定試験を申し込んで試験の資格を取得する必要があります。試験を受ける予定があれば、急いでPass4Testへ来て必要な情報を見つけましょ

う。Pass4TestはあなたがCDFOM認定試験に合格する保障ですから。

EXIN Certified Data Center Facilities Operations Manager 認定 CDFOM 試験問題 (Q34-Q39):

質問 # 34

What is the outcome of a risk evaluation process?

- A. The list of all identified risks
- B. The required budget treating the data center risk
- C. The report advising the board of management to accept all identified risks
- **D. The decision whether risk treatment needs to take place**

正解: D

解説:

In the EPI framework for risk management, after the risk identification and risk analysis steps, the risk evaluation step determines whether the assessed risks are acceptable or require treatment based on the organization's risk appetite, criteria, and the potential impact. The evaluation leads to a decision on whether risk treatment needs to take place.

* It is not simply compiling all risks (so option C is incorrect).

* It is not exclusively about budgeting (so option D is incorrect) though budgeting follows treatment decisions.

* It is not necessarily advising to accept all risks (so option B is incorrect) but rather it supports decision-making on treatment.

* Therefore, option A is correct: the outcome is the decision whether to treat the risk.

EPI DCFOM-Aligned Reference Concepts

* Risk evaluation assesses identified and analysed risks against risk criteria to decide on acceptability or need for treatment.

* The outcome is a documented decision-making step in the risk management process.

質問 # 35

The process of restoring normal service operation as quickly as possible and therefore minimizing the adverse impact on service levels committed to by the organization to its customers, is covered by?

- A. Capacity management
- B. Equipment life cycle management
- **C. Incident management**
- D. Change management

正解: C

解説:

Incident Management's primary objective is:

"Restore normal service as quickly as possible and minimize business impact." This aligns precisely with the scenario described.

Why other options are incorrect:

* A: Change management governs planned changes, not restoration.

* B: Capacity management ensures sufficient resources, not incident recovery.

* D: Equipment lifecycle deals with long-term asset management.

Thus, C is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

* Incident management focuses on fast service restoration and minimizing impact.

* Central to service operations and SLA protection.

質問 # 36

What is defined by the Recovery Time Objective (RTO)?

- A. The minimum level of service required to be operational again
- **B. The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity**
- C. The maximum age of the data to be restored in case of a disaster
- D. The time within which the impacts of not resuming activities would become unacceptable to the organization

正解: B

解説:

In organizational resilience and business continuity planning, the Recovery Time Objective (RTO) is a core metric used to determine the acceptable downtime for each business function.

EPI defines RTO as the:

"Targeted duration within which disrupted services or processes must be restored to a minimum acceptable operational level after a disaster." Key points:

- * Timeframe for Recovery The RTO identifies how quickly a facility, system, or service must be restored before the outage causes unacceptable consequences.
- * Minimum Service Capacity The RTO refers to restoring operations at a minimum acceptable level, not full normal operations.
- * Business Impact Analysis (BIA) Output RTO is derived during BIA where criticality and dependencies of business processes are assessed and prioritized.
- * Prioritization of Resources RTO informs disaster recovery planning, resource allocation, and restoration sequencing.

Therefore, the correct definition matches:

D - "The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity." Why the other options are incorrect:

- * A describes the MTPD (Maximum Tolerable Period of Disruption).
- * B describes elements of the Minimum Business Continuity Objective (MBCO).
- * C describes the Recovery Point Objective (RPO).

EPI DCFOM-Aligned Reference Concepts

- * RTO defines the permitted downtime for a service.
- * RTO is linked to minimum acceptable capability after recovery.
- * RTO is determined through BIA.

質問 # 37

Which process is not part of the 6-step document management life cycle?

- A. Destruction
- **B. Provisioning**
- C. Publication
- D. Creation

正解: B

解説:

EPI's document management methodology follows a 6-step structured life cycle for all controlled documentation used in a data center (e.g., SOPs, MOPs, EOPs, safety documents, policies, maintenance procedures).

The life cycle ensures all documents remain current, controlled, traceable, and properly retired.

The six recognized stages in the EPI-aligned document management life cycle are typically:

- * Creation- The document is drafted and developed.
- * Review- Subject matter experts verify technical correctness.
- * Approval- Authorized managers approve it for release.
- * Publication / Release- Document is issued for operational use under control.
- * Maintenance / Updates- Regular updates and version control.
- * Archival / Destruction- Retired versions are archived or securely destroyed.

Within this structure, "Provisioning" is not a recognized document life-cycle step in EPI's DCFOM framework.

Provisioning is a term used in IT or service management (e.g., server or user provisioning) but not in document control life cycles.

Therefore, Option C (Provisioning) is the correct answer.

EPI DCFOM-Aligned Reference Concepts

- * Document management requires strict version control procedures.
- * The document life cycle includes creation, review, approval, publication, maintenance, and destruction /archival.
- * "Provisioning" is not part of the document lifecycle in the EPI framework.

質問 # 38

The data center organization has all its services prepared and wishes to announce the outcome to its customers so that they can place their order.

What document - or information - will it share?

- A. Business continuity plan
- B. Service portfolio
- C. Service catalog
- D. Needs analysis report

正解: C

解説:

EPI distinguishes between:

- * Service Portfolio# internal document used for service design, planning, assessment
- * Service Catalog# customer-facing document listing available services

The service catalog provides customers with:

- * Service descriptions
- * Service options
- * Ordering information
- * Terms and conditions
- * SLA details
- * Pricing models (where applicable)

It is specifically designed to allow customers to select and order services.

Why other options are incorrect:

- * A: Service portfolio is internal only.
- * B: BCP is unrelated to service ordering.
- * C: Needs analysis is internal planning documentation.

Thus, Dis correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * The service catalog contains all customer-orderable services.
- * It is the primary communication tool for customer consumption.

質問 # 39

.....

CDFOM試験のブレンダンプは、より大きな会社に注目させる能力を証明できます。CDFOM試験ガイドは、良い仕事を得的のに役立ちます。CDFOMのテスト準備は、ごく短時間で完全かつ効率的に自分自身を証明するのに役立ちます。何万人ものお客様が、CDFOM試験の質問で20~30時間勉強すれば、CDFOM試験に合格し、それに応じて資格を取得できることを証明しました。
