## SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q38-Q43):

### NEW QUESTION # 38

What provides a foundation for the SAP Cloud ERP where integrations and extensions live?

- A. SAP Business Technology Platform
- B. SAP Business Accelerator Hub
- C. SAP ABAP Environment
- D. SAP Discovery Center

**Answer: A**

### NEW QUESTION # 39

You have assigned a business role to an end user who has been granted access to only one specific application. While you have a day off, it turns out that the app doesn't show up on the user's launchpad.

What can the user do?

- A. Create a page and assign it to the launchpad space.
- B. Assign a launchpad space to the business role.
- C. Use the search function to find the app.
- D. Assign a different business role that provides access.

**Answer: C**

### NEW QUESTION # 40

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf?

Note: There are 2 correct answers to this question.

- A. An execution variant has not been maintained.
- B. The process steps have been reordered.
- C. Data marked for deletion is picked for execution.
- D. The test process failed the execution pre-check.

**Answer: A,D**

Explanation:

The following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

\* An execution variant has not been maintained: An execution variant is a set of test data that is used to execute a test process. It contains the input values and expected results for each test step. If an execution variant is not maintained for a test process, the

system cannot run the test automatically and will skip it1.

\* The test process failed the execution pre-check: The execution pre-check is a validation that is performed before the test execution to ensure that the test process and the execution variant are consistent and complete. If the execution pre-check fails, it means that there are some issues or gaps in the test process or the execution variant that need to be resolved before the test can be run2. The following would not prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

\* Data marked for deletion is picked for execution: Data marked for deletion is data that is no longer relevant or valid for the test process. It can be marked for deletion by the customer or by SAP. However, this does not affect the test execution, as the system will ignore the data marked for deletion and use the available data for the test process3.

\* The process steps have been reordered: The process steps are the individual actions that are performed as part of the test process. They can be reordered by the customer or by SAP to reflect the changes in the business process or the user interface. However, this does not affect the test execution, as the system will follow the order of the process steps as defined in the test process4.

### NEW QUESTION # 41

Which of the following analyses can you create from the Manage KPIs and Reports app? Note: There are 3 correct answers to this question.

- A. Lumira Dashboards
- B. SAC Stories
- C. Review Booklets
- D. Object Views
- E. Multidimensional Reports

**Answer: B,C,E**

Explanation:

The Manage KPIs and Reports app is a single platform for creating all analytical applications using KPIs, reports, multidimensional reports, and stories. You can create applications that can be launched directly from SAP Fiori launchpad. The app is integrated with SAP Analytics Cloud, which allows you to create and view stories. A story is a presentation-style document that uses charts, tables, and other visualizations to display data insights. A review booklet is a collection of stories that can be used to share information with stakeholders. A multidimensional report is a type of report that allows you to analyze data from multiple dimensions and measures. You can create and view multidimensional reports from the app. An object view is a type of report that displays data for a single object, such as a customer or a product. You cannot create or view object views from the app. A Lumira dashboard is a type of dashboard that uses SAP Lumira to create and display data visualizations. You cannot create or view Lumira dashboards from the app. References = Manage KPIs and Reports, Stories, Review Booklets, [Multidimensional Reports]

### NEW QUESTION # 42

What does a partner line of business configuration expert reference when identifying business processes to cover in the Fit-to-Standard workshops?

- A. Digital Discovery Assessment
- B. Business Driven Configuration Questionnaire
- C. SAP Signavio Process Collaboration Hub
- D. SAP Signavio Journey Modeler

**Answer: C**

Explanation:

A partner line of business configuration expert plays a crucial role in preparing for Fit-to-Standard workshops, which are pivotal in aligning SAP S/4HANA Cloud Public Edition's capabilities with the customer's business requirements. To identify and select relevant business processes for discussion in these workshops, the expert would reference:

\* SAP Signavio Process Collaboration Hub: This tool serves as a comprehensive repository and collaboration platform for business process documentation and best practices. It provides detailed insights into various business processes, including their steps, variations, and best practices, as established in the SAP ecosystem. By referencing the SAP Signavio Process Collaboration Hub, a line of business configuration expert can identify relevant standard business processes that SAP S/4HANA Cloud supports, which should be covered during the Fit-to-Standard workshops. This ensures that the workshops focus on processes critical to the
