Analytics-Con-301 practice materials are typically seen as the tools of reviving, practicing and remembering necessary exam questions for the exam, spending much time on them you may improve the chance of winning. However, our Analytics-Con-301 training materials can offer better condition than traditional practice materials and can be used effectively. We treat it as our major responsibility to offer help so our Analytics-Con-301 Practice Guide can provide so much help, the most typical one is their efficiency.

Mostly you waste a lot of time to fail and hesitate without good study method. If you feel depressed for your last failure, you should choose our Analytics-Con-301 practice test materials. Most candidates choose our products and then clear exam one-shot. We are professional and authoritative exam dumps seller in this field. If you are looking for high-passing Analytics-Con-301 Practice Test materials, we are the best option for you. One right choice will help you avoid much useless effort. Efficiency is life.

Analytics-Con-301 Latest Test Format & Valid Analytics-Con-301 Exam Experience

You cannot pass the Analytics-Con-301 exam if you do not have real Salesforce Certified Tableau Consultant (Analytics-Con-301) exam questions. It is the foremost thing that everyone should have to nail the Salesforce Analytics-Con-301 Exam. The Analytics-Con-301 practice test material of TestKingFree is available in web-based practice tests, desktop practice exam software, and PDF.

Salesforce Certified Tableau Consultant Sample Questions (Q70-Q75):

NEW QUESTION # 70

A client creates a report and publishes it to Tableau Server where each department has its own user group set on the server. The client wants to limit visibility of the report to the sales and marketing groups in the most efficient manner. Which approach should the consultant recommend?

- A. Use user groups defined on Tableau Server to build user filters in the report's data source.
- B. Add user filters from Tableau Server to each worksheet and select only sales and marketing user groups.
- C. Prepare a row-level security (RLS) entitlement table to define limitations of the access and use it to build user filters in the report's data source.
- **D. Grant access to the report on the Tableau Server only to the members of sales and marketing user groups.**

Answer: D

Explanation:

The most efficient way to limit report visibility to specific user groups on Tableau Server is to manage permissions directly on the server. By granting access to the report only to the sales and marketing user groups, the client ensures that only members of these groups can view the report. This method is straightforward and does not require the additional steps involved in setting up row-level security or user filters.

References: The approach is supported by best practices in managing user permissions and visibility on Tableau Server, as described in the Tableau Community and official Tableau resources¹².

NEW QUESTION # 71

A client requests a published Tableau data source that is connected to SQL Server. The client needs to leverage the multiple tables option to create an extract. The extract will include partial data from the SQL Server data source.

Which action will reduce the amount of data in the extract?

- **A. Use an extract filter.**
- B. Set up the extract as an incremental refresh.
- C. Aggregate the extract to the visible dimensions.
- D. Define the filters by using custom SQL.

Answer: A

Explanation:

Using an extract filter is an effective way to reduce the amount of data in a Tableau extract. Extract filters allow you to specify a subset of the data to include, which can significantly decrease the size of the extract by excluding unnecessary data. This is particularly useful when you only need partial data from a larger SQL Server data source.

References: The recommendation to use extract filters to reduce data size is supported by Tableau's best practices for optimizing extracts. These practices suggest keeping the extract's data set short through filtering¹. Additionally, discussions in the Tableau Community confirm that hiding fields and using extract filters before extracting data can help reduce the extract size².

When dealing with large datasets in SQL Server and needing to create a manageable extract in Tableau, using an extract filter is the most direct and effective method to limit the data included:

Extract Filter: This involves setting filters that apply directly when the data is extracted from the source. This means that only the data meeting the specified criteria will be extracted and loaded into Tableau, significantly reducing the size of the extract.

To apply an extract filter, in the Data Source page in Tableau, drag the fields you want to filter by to the Filters shelf. Then, configure the desired filter criteria. When you create the extract, choose the option to "Add Filters to Extract" and select the configured filters. This ensures that only the data that meets these conditions is extracted from the SQL Server.

This approach not only minimizes the data volume but also speeds up performance in Tableau because it processes a smaller subset of the full dataset.

References

This procedure is described in detail in Tableau's help documentation on managing extracts and optimizing performance by using extract filters, which is recommended for scenarios involving large datasets or when specific subsets of data are required for analysis.

NEW QUESTION # 72

A client currently has a workbook with the table shown below.

Which method will produce the output for the Total Sales Value field for all the categories shown in the table?

- A. MAX() Function
- B. Quick Table Calculation
- C. A Window Function
- **D. Level of Detail (LOD) Calculation**

Answer: D

Explanation:

To calculate the Total Sales Value for all categories as displayed in the table, an LOD expression is ideal. An LOD calculation in Tableau allows you to compute values at the data level that is different from the view level. In this case, since the Total Sales Value appears consistent across different sub-categories within each category, an LOD expression can be used to fix the Total Sales Value irrespective of the sub-category detail. Here's how to set it up:

Go to the Calculations area by right-clicking in the data pane and selecting "Create Calculated Field".

Enter a name for the calculation, such as "Total Sales Value".

Enter the LOD expression: { FIXED [Category] : SUM([Sales]) }. This calculation fixes the total sales to the category level, effectively summing sales for all sub-categories within each category, irrespective of how the data is broken down in the view.

Drag this new calculated field into your visualization alongside the existing measures.

This method ensures that the Total Sales Value reflects the total for each category across all its sub-categories, matching the uniform values shown across different rows for each category in your table.

References

The explanation utilizes the concept of Level of Detail calculations in Tableau, which allows for advanced aggregations independent of the view level details. This concept is covered extensively in Tableau's official documentation and relevant training materials such as Tableau's online help resources.

NEW QUESTION # 73

Which technique should a Tableau consultant use to optimize workbook performance with a live data source?

- A. Use numbers and Booleans instead of strings and dates.
- B. Use larger sets of more granular records in Table Calculations instead of smaller sets of aggregated records.
- C. Use Compute Calculations Now for live data sources to materialize calculations.
- D. Use Custom SQL for Tableau query optimization.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When optimizing performance with live connections, Tableau documentation emphasizes minimizing the workload passed to the database. Key principles include:

- * Databases resolve numeric and Boolean fields significantly faster than strings and dates.
- * Using simpler data types reduces query parsing time and improves join and filter performance.
- * This is a standard Tableau recommendation for live query optimization.

Why the other answers are incorrect:

* B: Table calculations add workload on Tableau, but live performance depends on database efficiency; granular table calc processing worsens performance.

* C: Custom SQL often hurts performance because it disables query optimization, increases load times, and prevents Tableau from generating efficient queries.

* D: Compute Calculations Now applies only to extracts, and has no effect on live connections.

Thus, the documented performance best practice for live sources is to use numbers and Booleans instead of strings and dates.

* Live connection optimization guidance: prefer numeric and Boolean fields over strings/dates.

* Best practices cautioning against Custom SQL for performance.

* Documentation stating Compute Calculations Now applies only to extracts.

NEW QUESTION # 74

During a Tableau Cloud implementation, a Tableau consultant has been tasked with implementing row-level security (RLS). They have already invested in implementing RLS within their own database for their legacy reporting solution. The client wants to know if they will be able to leverage their existing RLS after the Tableau Cloud implementation.

Which two requirements should the Tableau consultant share with the client? Choose two.

- A. The RLS in database option must be configured in Tableau Cloud.
- B. Both live and extract connections can be used.
- C. The Tableau Cloud username must exist in the database.
- D. Only live data connections can be used.

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Tableau Cloud, database-level RLS can be used only with live connections because:

- * Tableau Cloud issues SQL queries using the logged-in user's identity.
- * Extracts break RLS because data is pulled out of the database and stored in Tableau's hyper file.
- * To leverage existing RLS rules, Tableau must query the database directly for the user.

Therefore:

Requirement 1:

The Tableau Cloud username (email) must exist in the database so that the database can enforce RLS using the authenticated identity.

Requirement 2:

Only live data connections support database-native RLS.

Extracts bypass database security and therefore cannot use RLS defined in the database.

Option D is incorrect because RLS is enforced in the database, not configured in Tableau Cloud.

Option B is incorrect because extracts cannot use database RLS.

Thus, correct answers are A and C.

- * Tableau Cloud live connection security requirements.
- * Database RLS documentation requiring matching database user identities.
- * Explanation that extracts bypass database permission systems.

NEW QUESTION # 75

.....

The Salesforce Practice Exam feature is the handiest format available for our customers. The customers can give unlimited tests and even track the mistakes and marks of their previous given tests from history so that they can overcome their mistakes. The Salesforce Certified Tableau Consultant (Analytics-Con-301) Practice Exam can be customized which means that the students can settle the time and Salesforce Certified Tableau Consultant (Analytics-Con-301) Questions according to their needs and solve the test on time.

Analytics-Con-301 Latest Test Format: <https://www.testkingfree.com/Salesforce/Analytics-Con-301-practice-exam-dumps.html>

Our pdf is a very handy format for casual and quick preparation of the Salesforce Analytics-Con-301 Latest Test Format certification exam, Considering the popularity of Salesforce Analytics-Con-301 Latest Test Format certification worldwide, you should strive to earn this certification, TestKingFree Analytics-Con-301 Latest Test Format helps clients pass their IT certification exams with: Over 4500 IT certification exam braindumps, including all Salesforce Analytics-Con-301 Latest Test Format exams, All the above services of our Analytics-Con-301 practice test can enable your study more time-saving, energy-saving and labor-saving.

At this point, the report should be reviewed to Exam Analytics-Con-301 Book try and determine the circumstances surrounding the suspicious activity, For example, cosmeceuticals are cosmetics that also provide some health Analytics-Con-301 benefit, nutraceuticals are food or food supplements that provide health benefits, etc.

Innovatively Analytics-Con-301 Practice Engine Boost the Most Admirable Exam Questions - TestKingFree

Our pdf is a very handy format for casual and quick preparation of the Salesforce Analytics-Con-301 Dumps Reviews certification exam, Considering the popularity of Salesforce certification worldwide, you should strive to earn this certification.

TestKingFree helps clients pass their IT certification Analytics-Con-301 Study Materials exams with: Over 4500 IT certification exam braindumps, including all Salesforce exams, All the above services of our Analytics-Con-301 practice test can enable your study more time-saving, energy-saving and labor-saving.

We support Credit Card payment.
