We know students run on low budgets so we made every possible effort to reduce the pre-purchase doubts. You can easily avail of our product at an affordable price. We are aware that the syllabus of C\_BCSBS\_2502 exam is extremely dynamic and changes with incoming updates, so we also offer you updates for free after purchase for 1 year. We assure you in every possible way that our SAP C\_BCSBS\_2502 Exam Preparation material is the most reliable there is.

# SAP Certified Associate - Positioning SAP Business Suite Sample Questions (Q30-Q35):

## NEW QUESTION # 30

How are RISE and GROW with SAP positioned as transformation journeys to SAP Business Suite? Note: There are 2 correct answers to this question.

- A. The choice for RISE or GROW with SAP is defined by the customer's type of ERP installation.
- B. The choice for RISE or GROW with SAP depends on the size of the customer.
- C. RISE and GROW are journeys with an emphasis SAP Business Suite as the end destination.
- D. RISE and GROW with SAP are synonymous with Private and Public Cloud ERP products.

**Answer: A,C**

Explanation:

The question asks how RISE with SAP and GROW with SAP are positioned as transformation journeys toward SAP Business Suite, with two correct answers. Based on official SAP documentation, RISE with SAP and GROW with SAP are strategic offerings designed to facilitate customers' transitions to cloud-based ERP solutions, specifically targeting SAP S/4HANA Cloud (a core component of SAP Business Suite). The correct answers are A and C, as they accurately reflect the positioning of these offerings.

Explanation of Correct Answers:

Option A: The choice for RISE or GROW with SAP is defined by the customer's type of ERP installation.

This is correct because the choice between RISE with SAP and GROW with SAP is influenced by the customer's existing ERP landscape and their deployment preferences (e.g., on-premise, private cloud, or public cloud).

According to the Positioning SAP Business Suite documentation:

"RISE with SAP is designed for customers with complex ERP landscapes, often those with existing on-premise SAP ECC or SAP S/4HANA installations, who are looking to transform and migrate to the cloud with a managed, outcome-based approach. It provides a guided journey for customers to adopt SAP S/4HANA Cloud, private or public edition, depending on their needs."

In contrast:

"GROW with SAP is tailored for customers who are new to SAP or have simpler ERP setups, often adopting SAP S/4HANA Cloud, public edition, for a standardized, fast-track implementation." This indicates that the type of ERP installation—whether a customer is transitioning from an on-premise system (more suited for RISE with SAP) or starting fresh with a cloud-native solution (more suited for GROW with SAP)—plays a critical role in determining the appropriate transformation journey. For example, RISE with SAP supports customers with legacy systems by offering tools like the SAP Readiness Check and Custom Code Analyzer to facilitate migration, while GROW with SAP emphasizes preconfigured best practices for greenfield implementations.

Option C: RISE and GROW are journeys with an emphasis on SAP Business Suite as the end destination.

This is also correct, as both RISE with SAP and GROW with SAP are positioned as transformation journeys that guide customers toward SAP S/4HANA Cloud, which is a core component of SAP Business Suite. The SAP Business Suite in the cloud context refers to the suite of solutions, including SAP S/4HANA Cloud, that enable intelligent, sustainable enterprises. The documentation states:

"RISE with SAP and GROW with SAP are transformation offerings that help customers move to SAP S/4HANA Cloud, enabling them to leverage the full capabilities of SAP Business Suite in the cloud. These journeys focus on delivering business process transformation, innovation, and scalability, with SAP S/4HANA Cloud as the target ERP solution."

For RISE with SAP, the journey includes a comprehensive transformation package (business process redesign, technical migration, and cloud infrastructure) to achieve SAP Business Suite capabilities. For GROW with SAP, the journey is a streamlined adoption path for midmarket customers or those new to SAP, emphasizing rapid deployment of SAP S/4HANA Cloud, public edition. Both offerings position SAP Business Suite (via SAP S/4HANA Cloud) as the end destination, supporting advanced features like AI, analytics, and integration with SAP Business

Technology Platform (BTP).

Explanation of Incorrect Answers:

Option B: RISE and GROW with SAP are synonymous with Private and Public Cloud ERP products.

This is incorrect because RISE with SAP and GROW with SAP are not direct synonyms for private and public cloud ERP products. While RISE with SAP supports both SAP S/4HANA Cloud, private edition and public edition (depending on customer needs), and GROW with SAP is primarily aligned with SAP S/4HANA Cloud, public edition, these offerings are transformation programs, not the ERP products themselves. The documentation clarifies:

"RISE with SAP is a transformation journey that includes SAP S/4HANA Cloud (private or public edition), SAP Business Technology Platform, and services for business process transformation. GROW with SAP is a solution for rapid adoption of SAP S/4HANA Cloud, public edition, with preconfigured processes." Equating RISE and GROW directly to private and public cloud products oversimplifies their scope, as they encompass services, tools, and methodologies beyond just the ERP deployment model.

Option D: The choice for RISE or GROW with SAP depends on the size of the customer.

This is incorrect because the choice between RISE with SAP and GROW with SAP is not primarily determined by the size of the

customer (e.g., small, medium, or large enterprises). While GROW with SAP is often marketed toward midmarket customers due to its standardized, cost-effective approach, and RISE with SAP is suited for larger enterprises with complex needs, customer size is not the defining criterion. The documentation emphasizes:

"The decision for RISE or GROW with SAP is based on the customer's transformation goals, existing ERP landscape, and desired level of customization, not solely on company size." For example, a large enterprise with a simple ERP requirement could opt for GROW with SAP, while a midmarket customer with a complex legacy system might choose RISE with SAP for its managed transformation services.

Summary:

RISE with SAP and GROW with SAP are transformation journeys designed to guide customers to SAP Business Suite, specifically SAP S/4HANA Cloud. The choice between them depends on the customer's ERP installation type (e.g., on-premise vs. greenfield), supporting Option A. Both journeys emphasize SAP Business Suite as the end destination, supporting Option C. Options B and D are incorrect, as they misrepresent the nature of these offerings and their selection criteria.

### NEW QUESTION # 31

Which core component of SAP Business Suite focuses on managing financial transactions and reporting? Please choose the correct answer.

- A. SAP Business Objects
- B. SAP Ariba
- C. SAP SuccessFactors
- **D. SAP Financial Accounting (FI)**

**Answer: D**

### NEW QUESTION # 32

Which of the following trends are shaping the adoption of AI in modern enterprises? Note: There are 3 correct answers to this question.

- **A. To prioritize responsible, transparent AI practices to minimize bias**
- B. To limit AI usage to IT departments only
- **C. To use generative AI to enhance innovation and generate insights**
- **D. To integrate AI into business applications for seamless workflow enhancement**
- E. To fully automate customer services

**Answer: A,C,D**

Explanation:

The adoption of AI in modern enterprises is driven by trends that align with business innovation, operational efficiency, and ethical considerations. SAP, as a leader in enterprise software, emphasizes AI integration within its Business AI portfolio, including SAP Business Data Cloud and SAP S/4HANA, to address these trends. The question asks for the trends shaping AI adoption, with three correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" narrative and broader industry insights on AI adoption.

\* Option A: To use generative AI to enhance innovation and generate insights  
Generative AI is a transformative trend in modern enterprises, enabling innovation by generating insights, automating content creation, and enhancing decision-making. SAP emphasizes generative AI within its Business AI offerings, such as Joule and SAP Business Data Cloud, to drive innovation across business processes like finance, HR, and supply chain management. The documentation highlights how generative AI helps enterprises uncover new opportunities and generate actionable insights, making it a key trend shaping AI adoption. Extract: "Generative AI is poised to unlock innovation across your enterprise, automating processes, generating content, and delivering insights that drive smarter decisions. With SAP Business AI, you can embed generative AI into your SAP applications to transform how your business operates." Extract: "SAP Business Data Cloud is a fully managed SaaS solution that unifies and governs all SAP data and seamlessly connects with third-party data-giving line-of-business leaders context to make even more impactful decisions. ... Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.

\* Option B: To limit AI usage to IT departments only Limiting AI usage to IT departments is not a trend shaping AI adoption in modern enterprises. On the contrary, enterprises are democratizing AI across business functions, embedding it into applications used by various departments (e.g., finance, HR, operations) to enhance productivity and decision-making. SAP's approach, through tools like Joule and SAP Business Data Cloud, focuses on making AI accessible to business users, not restricting it to IT.

The documentation and industry sources emphasize broad AI adoption across organizations, making this option incorrect. Extract: "With SAP Business AI, you can empower every employee with AI capabilities embedded in the applications they use every day, from finance to supply chain to human resources." This option is incorrect.

\* Option C: To integrate AI into business applications for seamless workflow enhancement Integrating AI into business applications is a significant trend shaping enterprise AI adoption. SAP's Business AI strategy focuses on embedding AI into core business processes within SAP applications (e.g., SAP S

/4HANA, SAP SuccessFactors) to enhance workflows, automate tasks, and improve efficiency. This seamless integration ensures that AI enhances existing processes without disrupting user workflows, a trend widely recognized in SAP's documentation and industry analyses. Extract: "SAP Business AI embeds intelligent capabilities directly into your business processes, so you can work faster, smarter, and more efficiently. From automating routine tasks to providing predictive insights, AI is seamlessly integrated into SAP applications to drive better outcomes." Extract: "Enterprises are increasingly integrating AI into their core business applications to streamline workflows, enhance decision-making, and improve operational efficiency. This trend is evident in SAP's approach to embedding AI across its portfolio, ensuring seamless adoption." This option is correct.

\* Option D: To fully automate customer services While AI is used to enhance customer service (e.g., through chatbots and personalized interactions), fully automating customer services is not a primary trend shaping enterprise AI adoption. Enterprises aim to augment customer service with AI to improve efficiency and personalization, but human interaction remains critical in many scenarios. SAP's AI solutions focus on broader applications, such as process automation and insights generation, rather than complete automation of customer service. The documentation does not highlight this as a key trend. Extract: "SAP Business AI enhances customer experiences by providing personalized recommendations and predictive insights, but it is designed to augment, not replace, human interactions in customer service processes." This option is incorrect.

\* Option E: To prioritize responsible, transparent AI practices to minimize bias Prioritizing responsible and transparent AI practices is a critical trend shaping enterprise AI adoption. Enterprises, including those using SAP solutions, focus on ethical AI to ensure fairness, transparency, and compliance with regulations. SAP's Business AI emphasizes responsible AI practices, such as minimizing bias and ensuring data governance, to build trust in AI outcomes. This trend is explicitly supported in SAP's documentation and aligns with industry priorities for ethical AI deployment. Extract: "SAP Business AI is built on a foundation of responsible AI, ensuring transparency, fairness, and compliance. Our solutions prioritize ethical AI practices to minimize bias and deliver trusted outcomes for your business." Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.

Summary of Correct Answers:

\* A: Using generative AI to enhance innovation and generate insights is a key trend, enabling enterprises to leverage AI for creative solutions and decision-making.

\* C: Integrating AI into business applications for seamless workflow enhancement drives efficiency and adoption across business functions.

\* E: Prioritizing responsible, transparent AI practices to minimize bias ensures ethical AI deployment and builds trust in enterprise AI solutions.
