NEW QUESTION # 71

Which interval is the duration of time before an analytics detector can raise an alert?

- A. Test period

- B. Activation period
- C. Deduplication period
- **D. Training period**

Answer: D

Explanation:

The correct answer is C - Training period.

Analytics detectors within Cortex XSIAM utilize a training period to establish a baseline of normal behavior.

During this interval, the detector learns and identifies patterns and behaviors that are considered normal within the environment. Once the training period is complete, the detector can accurately detect and raise alerts on anomalies.

Other intervals mentioned do not match the definition:

- * Activation period: Refers to the time from activation to full functionality.
- * Test period: Typically refers to internal or manual testing stages.
- * Deduplication period: The time during which similar alerts are suppressed.

"Analytics detectors require an initial training period to learn normal patterns before being able to accurately raise alerts." Document Reference: EDU-270c-10-lab-guide_02.docx (1).pdf Exact Page: Page 28 (Alerting and Detection Processes Section)
