

# Valid 2V0-16.25 Exam Format | VMware 2V0-16.25 Excellect Pass Rate: VMware vSphere Foundation 9.0 Administrator Pass for Sure

What's more, part of that PremiumVCEDump 2V0-16.25 dumps now are free: [https://drive.google.com/open?id=12TQmxRRMJqJoql2mfVZX6yu40v5tg7\\_2](https://drive.google.com/open?id=12TQmxRRMJqJoql2mfVZX6yu40v5tg7_2)

The secret that PremiumVCEDump helps many candidates pass 2V0-16.25 exam is VMware exam questions attentively studied by our professional IT team for years, and the detailed answer analysis. We constantly updated the 2V0-16.25 Exam Materials at the same time with the exam update. We try our best to ensure 100% pass rate for you.

PremiumVCEDump's VMware 2V0-16.25 exam training materials is the best training materials. If you are an IT staff, it will be your indispensable training materials. Do not take your future betting on tomorrow. PremiumVCEDump's VMware 2V0-16.25 exam training materials are absolutely trustworthy. We are dedicated to provide the materials to the world of the candidates who want to participate in IT exam. To get the VMware 2V0-16.25 Exam Certification is the goal of many IT people & Network professionals. The pass rate of PremiumVCEDump is incredibly high. We are committed to your success.

## 2V0-16.25 Excellect Pass Rate & Study 2V0-16.25 Tool

Our 2V0-16.25 study materials present the most important information to the clients in the simplest way so our clients need little time and energy to learn our 2V0-16.25 study materials. The clients only need 20-30 hours to learn and prepare for the test. For those people who are busy in their jobs, learning or other things this is a good news because they needn't worry too much that they don't have enough time to prepare for the test and can leisurely do their main things and spare little time to learn our 2V0-16.25 Study Materials. So it is a great advantage of our 2V0-16.25 study materials and a great convenience for the clients.

## VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Troubleshoot and Optimize the VMware Solution:</b> This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Deploy, Configure, and Operate VMware vSphere Foundation (VVF):</b> This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>IT Architectures, Technologies, Standards:</b> This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>VMware vSphere Foundation Fundamentals:</b> This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.</li> </ul>

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q11-Q16):

### NEW QUESTION # 11

How does an administrator configure VMware Cloud Foundation (VCF) Operations for logs to send Notifications and Metrics to VCF Operations?

- A. Configure the Integration through VCF Operations for Logs.
- **B. Configure the Integrations through VCF Operations.**
- C. Launch the wizard from VCF Operations.
- D. Launch the wizard from VCF Operations for Logs.

**Answer: B**

Explanation:

To configure VMware Cloud Foundation (VCF) Operations for logs so that it can send notifications and metrics, administrators must use the Integrations workflow inside VCF Operations.

\* You configure integrations centrally from the Administration > Integrations page in VCF Operations.

\* Here you add the VCF Operations for Logs data source, configure credentials, and set up Webhooks for alerts.

\* Once integration is completed, VCF Operations for Logs data can be consumed in VCF Operations dashboards and used for notifications and metrics.

This process is not launched directly from "VCF Operations for Logs," but rather from VCF Operations itself, where all integrations (vCenter, vSAN, NSX, and Logs) are centrally managed.

VMware Cloud Foundation 9.0.2 - Integrating Data Sources with VCF Operations  
 VMware Cloud Foundation 9.0.3 - Configure VCF Operations for logs integration

### NEW QUESTION # 12

An administrator must configure identity access for VMware vSphere Foundation (VVF) to allow admin accounts from the enterprise Active Directory domain corp.local to log in using domain credentials. Security requires authentication to use the default Active Directory protocol, without federation.

Which configuration step is required to enable Active Directory users to authenticate to vCenter?

- A. Add Active Directory over LDAP as an identity source.
- B. Add the domain controller certificate to the Trusted Root store in vCenter.
- C. Configure Identity Federation using SAML with corp.local.
- D. Configure a trusted identity provider using OpenID Connect (OIDC).

**Answer: A**

Explanation:

To allow Active Directory domain users (corp.local) to authenticate in vCenter with domain credentials:

\* The correct method is configuring Active Directory over LDAP as an identity source. (D)

\* This uses the default AD protocol (LDAP/Kerberos) without requiring SAML or OIDC federation.

Other options:

\* A. Adding domain controller certificate# Needed for LDAPS but not the main step.

\* B. Identity Federation with SAML# Requires federation, not allowed per requirements.

\* C. OpenID Connect (OIDC)# Used for external IdPs, not traditional AD auth.

VMware vSphere 9.0 -Configuring Active Directory Identity Sources

VMware Docs: Add AD over LDAP as Identity Source

### NEW QUESTION # 13

An administrator is tasked to configure Service Discovery in VMware Cloud Foundation (VCF) Operations for Linux Guest Operating Systems. For security reasons a non-root user needs to be used and all required steps for the Guest OS have already been completed.

What are the two steps the administrator needs to take? (Choose two.)

- A. Activate Service Discovery in the required VCF Operations NSX instance.
- B. Deactivate Use Sudo in the Service Discovery instance.
- C. Activate Use Sudo in the Service Discovery instance.
- D. Activate Service Discovery in the required VCF Operations vCenter instance.
- E. Activate Use Sudo in the vCenter instance.

**Answer: C,D**

Explanation:

To configure Service Discovery for Linux Guest OS in VCF Operations using a non-root user:

\* Activate Service Discovery in the vCenter instance to start discovery operations. (B)

\* Enable Use Sudo in the Service Discovery instance so the non-root account can run necessary privileged commands. (E) Other options:

\* A. Activate Use Sudo in vCenter instance# Wrong, this is configured in Service Discovery.

\* C. Activate in NSX instance# Not applicable; Service Discovery integrates with vCenter.

\* D. Deactivate Use Sudo# Opposite of required security setting.

### NEW QUESTION # 14

An administrator creates a cluster by joining a Medium sized VMware Cloud Foundation (VCF) Operations for Logs node to an existing Medium sized single-node deployment.

The secondary node of the cluster fails, degrading the functionality of VCF Operations for Logs.

What action should the administrator take to create a healthy active cluster?

- A. Rebuild the VCF Operations for Logs cluster secondary node and place the cluster back into operation.
- B. Scale up the VCF Operations for Logs primary and secondary node to size Large.
- C. Scale up the VCF Operations for Logs primary and secondary node to size Extra Large.
- D. Rebuild the VCF Operations for Logs cluster secondary node and add an additional node to the cluster.

**Answer: A**

Explanation:

In VMware Cloud Foundation (VCF) Operations for Logs, clusters require a minimum of three healthy nodes to function in a fully active and resilient state. When a cluster is deployed with only two nodes (primary + one secondary), the environment does not meet the minimum recommended requirement. If the secondary node fails, the cluster becomes degraded and functionality is reduced.

The correct remediation is:

- \* Rebuild the failed secondary node so that the cluster can return to a healthy state.
- \* After rebuilding, the node must be rejoined to the primary using the Management # Cluster workflow (secure token, IP/hostname of primary, etc.).

Why not the other options?

- \* A. Scale up to Extra Large ## Scaling up affects resource capacity (vCPU, RAM, disk) but does not solve the problem of missing nodes.
- \* B. Scale up to Large ## Same reason as above, scaling up does not restore HA.
- \* D. Rebuild the secondary and add an additional node ## While adding more nodes is a best practice (since HA clusters require three nodes), the minimum action required to restore a healthy active cluster is to rebuild the failed node. Adding more nodes is optional for increased resiliency.

Therefore, the immediate and verified answer is to rebuild the failed secondary node.

 VMware Cloud Foundation 9.0.1 Documentation - High Availability VCF Operations for Logs requires minimum of three nodes (1 primary, 2 workers)

## NEW QUESTION # 15

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within a VMware vSphere Foundation (VVF) environment.

As part of the root cause analysis following a recent critical event, the administrator determined that specific log messages on a host clearly identified the problem.

What should the administrator implement to provide additional data to help troubleshoot in the future?

- A. VCF Operations Diagnostics
- B. VCF Operations for logs
- C. VCF Operations Management Pack for VCF
- D. VCF Automation

**Answer: B**

Explanation:

When troubleshooting critical events in a VMware vSphere Foundation (VVF) environment, logs are essential for root cause analysis.

- \* In the given scenario, the administrator identified that specific log messages on a host clearly pinpointed the issue.
- \* To enhance future troubleshooting, the best approach is to implement VCF Operations for Logs.
- \* This enables centralized log collection, log-based alerts, and advanced queries, making it easier to correlate issues across infrastructure.

Other options like VCF Operations Diagnostics focus on proactive health checks and findings, while Management Pack for VCF extends observability but does not provide raw log insights. VCF Automation is unrelated to troubleshooting logs.

## NEW QUESTION # 16

.....

Maybe you are under tremendous pressure now, but you need to know that people's best job is often done under adverse circumstances. Ideological pressure, even physical pain, can be a mental stimulant. Turn pressure into power, which may be your chance to complete the transformation. But our 2V0-16.25 Exam Questions can help you become more competitive easier than you can imagine. With a pass rate of 98% to 100%, our 2V0-16.25 study materials can help you achieve your dream easily. And we have money back guarantee on our 2V0-16.25 practice guide.
