In recent years, our CISM Test Torrent has been well received and have reached 99% pass rate with all our candidates. If you have a try on our CISM exam questions, you will be glad about the wonderful quality.

The primary goal of every ISACA certification is to deliver you to the highest stages of professional triumph. The CISM or known completely as the Certified Information Security Manager is a transformative certification exam that seals your capability across different work-related aspects of management using your information security command. It is your testament of know-how in juggling risk management, program development alongside management, information security governance, and incident management with a breeze.

The CISM exam cannot be taken by every IT professional because a potential candidate should have at least five years of experience in information security and three years of experience in at least three or more of the following sectors:

- Information security governance;
- Information security program development and management;
- Information security governance.
- Information security incident management;

Furthermore, the experience mentioned above should be gained not less than ten years before applying for the exam or within five years after passing it.

To prepare for the CISM Exam, candidates are encouraged to participate in training programs and review the official study materials provided by ISACA. They may also benefit from taking practice exams and participating in study groups to help them better understand the material and prepare for the exam. Passing the CISM exam is a significant achievement and can help individuals advance their career in the field of information security.

ISACA Certified Information Security Manager Sample Questions (Q153-Q158):

NEW QUESTION # 153

Management has expressed concerns to the information security manager that shadow IT may be a risk to the organization. What is the FIRST step the information security manager should take?

- A. Block the end user's ability to use shadow IT
- B. Determine the extent of shadow IT usage
- C. Update the security policy to address shadow IT
- D. Determine the value of shadow IT projects

Answer: B

NEW QUESTION # 154

Which of the following is MOST important to consider when developing a security awareness program in an organization?

- A. Established key risk indicators (KRIs)
- B. Target audience demographics
- C. Industry benchmarks
- D. Targeted monthly deliverables

Answer: B

NEW QUESTION # 155

Which of the following is the BEST way for information security manager to identify compliance with information security policies within an organization?

- A. Analyze system logs.
- B. Conduct security awareness testing.
- C. Conduct periodic audits.
- D. Perform vulnerability assessments.

Answer: C

NEW QUESTION # 156

Which of the following plans should be invoked by an organization in an effort to remain operational during a disaster?

- A. Incident response plan
- **B. Business continuity plan (BCP)**
- C. Disaster recovery plan (DRP)
- D. Business contingency plan

Answer: B

NEW QUESTION # 157

Simple Network Management Protocol v2 (SNMP v2) is used frequently to monitor networks. Which of the following vulnerabilities does it always introduce?

- A. Remote buffer overflow
- B. Cross site scripting
- C. Man-in-the-middle attack
- **D. Clear text authentication**

Answer: D

Explanation:

Explanation/Reference:

Explanation:

One of the main problems with using SNMP v1 and v2 is the clear text "community string" that it uses to authenticate. It is easy to sniff and reuse. Most times, the SNMP community string is shared throughout the organization's servers and routers, making this authentication problem a serious threat to security. There have been some isolated cases of remote buffer overflows against SNMP daemons, but generally that is not a problem. Cross site scripting is a web application vulnerability that is not related to SNMP. A man-in-the-middle attack against a user datagram protocol (UDP) makes no sense since there is no active session; every request has the community string and is answered independently.

NEW QUESTION # 158

.....
