

Get Real Palo Alto Networks CloudSec-Pro Exam Questions By [Lead2PassExam]

What CloudSec-Pro study quiz can give you is far more than just a piece of information. First of all, CloudSec-Pro preparation questions can save you time and money. As a saying goes, to sensible men, every day is a day of reckoning. Every minute CloudSec-Pro study quiz saves for you may make you a huge profit. Secondly, CloudSec-Pro learning guide will also help you to master a lot of very useful professional knowledge in the process of helping you pass the exam.

As we all know that, first-class quality always comes with the first-class service. There are also good-natured considerate after sales services offering help on our CloudSec-Pro study materials. All your questions about our CloudSec-Pro practice braindumps are deemed as prior tasks to handle. So if you have any question about our CloudSec-Pro Exam Quiz, just contact with us and we will help you immediately. That is why our CloudSec-Pro learning questions gain a majority of praise around the world.

CloudSec-Pro Reliable Test Dumps & Valid Test CloudSec-Pro Format

We are benefiting more and more candidates for our excellent CloudSec-Pro exam materials which is compiled by the professional experts accurately and skillfully. We are called the best friend on the way with our customers to help pass their CloudSec-Pro exam and help achieve their dreaming certification. The reason is that we not only provide our customers with valid and reliable CloudSec-Pro study questions, but also offer best service online since we uphold the professional ethical.

Palo Alto Networks Cloud Security Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45

Console is running in a Kubernetes cluster, and Defenders need to be deployed on nodes within this cluster. How should the Defenders in Kubernetes be deployed using the default Console service name?

- A. From the deployment page, configure the cloud credential in Console and allow cloud discovery to auto-protect the Kubernetes nodes.
- **B. From the deployment page in Console, choose "twistlock-console" for Console identifier, generate DaemonSet file, and apply DaemonSet to the twistlock namespace.**
- C. From the deployment page in Console, choose "pod name" for Console identifier, generate DaemonSet file, and apply the DaemonSet to twistlock namespace.
- D. From the deployment page in Console, choose "twistlock-console" for Console identifier and run the "curl | bash" script on the master Kubernetes node.

Answer: B

Explanation:

In Kubernetes environments, deploying Defenders to protect nodes involves leveraging DaemonSets, which ensure that every node

in the cluster runs a copy of a specific pod. When the Console is running within a Kubernetes cluster, it's essential to correctly reference the Console service to ensure seamless communication between Defenders and the Console. Option A is the most straightforward and Kubernetes-native method for deploying Defenders. By choosing "twistlock-console" as the Console identifier on the deployment page within the Console, users can generate a DaemonSet configuration file tailored for the Twistlock namespace.

This approach ensures that the Defenders are correctly configured to communicate with the Console, providing comprehensive security coverage across the Kubernetes nodes. This method aligns with best practices for deploying security agents in Kubernetes and is supported by Prisma Cloud (formerly Twistlock) documentation, which provides step-by-step instructions for deploying Defenders using DaemonSets.

NEW QUESTION # 46

Which three actions are available for the container image scanning compliance rule? (Choose three.)

- A. Allow
- B. Alert
- C. Block
- D. Ignore
- E. Snooze

Answer: B,C,D

Explanation:

The Prisma Cloud documentation specifies the actions that can be taken for container image scanning compliance rules as:

- * C. Block: This action prevents the use of a container image if it fails to meet the defined compliance criteria.
- * D. Ignore: This action allows the image to bypass the compliance check, effectively overlooking the identified issues.
- * E. Alert: This action triggers an alert to notify the relevant stakeholders about the compliance status of the container image.

These actions are integral to Prisma Cloud's governance capabilities, allowing organizations to enforce their security and compliance policies effectively. By setting up these rules, teams can ensure that only images that comply with their standards are deployed, while also having the flexibility to ignore certain images or receive alerts for further investigation.

NEW QUESTION # 47

Which field is required during the creation of a custom config query?

- A. api.name
- B. resource status
- C. cloud.type
- D. finding.type

Answer: A

Explanation:

During the creation of a custom config query in Prisma Cloud, the "api.name" field is required. This field specifies the API endpoint that the query will target, essentially defining the scope of the query within the cloud environment. The "api.name" serves as a critical identifier that allows the query to retrieve specific information or perform actions related to the chosen API endpoint. By specifying the "api.name," users can create tailored queries that address their specific security, compliance, or governance needs, enabling more precise and effective management of cloud resources and security posture.

NEW QUESTION # 48

A Prisma Cloud administrator is tasked with pulling a report via API. The Prisma Cloud tenant is located on app2.prismacloud.io. What is the correct API endpoint?

- A. <https://api.prismacloud.io>
- B. <https://api2.prismacloud.io>
- C. <http://api.prismacloud.cn>
- D. <https://api2.eu.prismacloud.io>

Answer: B

Explanation:

<https://prisma.pan.dev/api/cloud/api-urls/>

When accessing the Prisma Cloud API for a tenant located on app2.prismacloud.io, the correct API endpoint to use would be <https://api2.prismacloud.io>. This endpoint corresponds to the Prisma Cloud service instance hosted on app2.prismacloud.io, ensuring that API requests are directed to the correct instance of the service for processing.

The use of api2 in the URL indicates that this is the second instance or a different geographical or functional partition of the Prisma Cloud service, which might be used for load balancing, redundancy, or serving different sets of users. It is crucial to use the correct endpoint corresponding to the Prisma Cloud console URL to ensure successful API communication and authentication.

NEW QUESTION # 49

Which two variables must be modified to achieve automatic remediation for identity and access management (IAM) alerts in Azure cloud? (Choose two.)

- **A. SB_QUEUE_KEY**
- B. SQS_QUEUE_NAME
- **C. API_ENDPOINT**
- D. YOUR_ACCOUNT_NUMBER

Answer: A,C

Explanation:

AZURE:

```
% export SB_QUEUE_KEY=your_sb_queue_key
```

```
% export SB_QUEUE_KEY_NAME=your_sb_queue_key_name
```

```
% export SB_QUEUE_NAME_SPACE=your_sb_queue_name_space
```

```
% export API_ENDPOINT=api_tenant
```

```
% export AUTH_KEY=your_jwt_token
```
