Adobe Workfront Project Manager Certified Professional 認定 AD0-E911 試験問題 (Q14-Q19):

質問 # 14

A copywriter wants to see his incomplete tasks for projects to which he is assigned.

Which steps should the project manager take to create a custom Workfront report with this information?

- A. Visit the Reports page, create a new Task report, and add the filter Task > Assigned To Role ID > Equal > Copywriter and Task Status > Not Equal > Complete
- **B. Visit the Reports page, create a new Task report, add filters for Task Status > Not Equal > Complete and Assignment Users Name > Equal > [User Name]**
- C. Visit the Reports page, create a new Project report, add filters for Project Status > Equal > Current and Project Owner ID > Equal > [User Name]

正解: B

解説:

To filter tasks that are incomplete and assigned to a specific user, the correct approach is to create a Task report, then filter by Task Status that is "Not Equal" to Complete. Additionally, the Assignment filter should include the user's name to ensure only tasks assigned to the specified copywriter are shown.

質問 # 15

A project manager wants to see all of the assignees for each task in a project.

Which field should the manager reference to view all task assignees?

- A. Assigned To
- **B. Assignments**
- C. Assigned

正解: B

解説:

In Adobe Workfront, the "Assignments" field allows a project manager to see all the users assigned to a task. This field is useful for viewing multiple assignees on a single task, as tasks can have more than one person responsible. The "Assigned To" and "Assigned" fields are often used for single-user assignments and are not as comprehensive for viewing all task assignees.

質問 # 16

Which initial project setting would a project owner use to identify and report on key tasks on a project?

- A. Resource Leveling Mode
- B. Schedule
- **C. Milestone Path**

正解: C

解説:

In Adobe Workfront, the initial project setting used to identify and report on key tasks is the Milestone Path. Adobe documentation explains that milestones can be associated with tasks to indicate important steps in the life of a project, and that the collection of predefined milestones is called a milestone path. Workfront also states that milestone paths allow key tasks in a project to be associated with predefined milestones, giving managers and stakeholders a high-level view of project progress. In practice, the project owner applies a milestone path to the project first, then associates individual key tasks with milestones from that path. This supports milestone reporting and milestone views across projects. Schedule controls working and non-working time for date calculations, while Resource Leveling Mode relates to resolving resource allocation conflicts. Neither setting is designed to mark key

tasks for milestone reporting. Therefore, the correct answer is A. Milestone Path.

質問 # 17

A project manager has set up and launched a new project for an annual marketing campaign. Where can the project team locate their work requests?

- A. Email, Workfront Home, Project tasks list
- B. Email, Automatic Reminders, Workfront Home
- C. Event Notifications, Approval processes, Email

正解: A

解説:

Workfront provides multiple ways for team members to track and locate their assigned work. The primary tools include the Workfront Home area, which centralizes all work items assigned to a user, and email notifications that can alert users to new assignments or updates. Additionally, users can view specific tasks in the Project tasks list. Workfront Home is a key component for workers as it consolidates all active assignments and updates in a single view.

質問 # 18

All of the tasks on a project show as 100% complete, but when the Project Owner tries to update the status of the project to Complete, the Owner receives an error that reads "Project cannot be marked Complete if there are open issues and tasks that are not complete." How can the Project Owner determine which tasks are incomplete?

- A. There are incomplete issue predecessors that need to be resolved. The Project Owner can navigate to the project issues section in the left navigation pane to see the incomplete items.
- B. There are incomplete approval workflows on one or more tasks. The Project Owner could filter the project task list for incomplete tasks and check the task status to determine which tasks are not complete.
- C. The task status needs to be updated to Done even though the percent complete is at 100%. The Project Owner could filter the project task list for incomplete tasks and check the task status to determine which tasks are not complete.

正解: C

解説:

Even if the task shows 100% complete, the Status of the task may still be listed as something other than "Done." Workfront requires that both the Status and the Percent Complete indicate the task is fully completed before the project can be marked as complete. The Project Owner can filter for tasks that are not marked as "Done" and update their statuses accordingly.
