New HPE6-A78 Reliable Source | Valid HP HPE6-A78: Aruba Certified Network Security Associate Exam 100% Pass

Students are worried about whether the HPE6-A78 practice materials they have purchased can help them pass the exam and obtain a certificate. They often encounter situations in which the materials do not match the contents of the exam that make them waste a lot of time and effort. But with HPE6-A78 exam dump, you do not need to worry about similar problems. Because our study material is prepared strictly according to the exam outline by industry experts, whose purpose is to help students pass the exam smoothly. As the authoritative provider of HPE6-A78 Test Guide, we always pursue high passing rates compared with our peers to gain more attention from potential customers. In order to gain the trust of new customers, HPE6-A78 practice materials provide 100% pass rate guarantee for all purchasers. We have full confidence that you can successfully pass the exam as long as you practice according to the content provided by HPE6-A78 exam dump. Of course, if you fail to pass the exam, we will give you a 100% full refund.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

A company with 382 employees wants to deploy an open WLAN for guests. The company wants the experience to be as follows:

The company also wants to provide encryption for the network for devices that are capable, you implement for the WLAN? Which security options should

- A. Captive portal and WPA3-Personal
- B. Opportunistic Wireless Encryption (OWE) and WPA3-Personal
- C. **Captive portal and Opportunistic Wireless Encryption (OWE) in transition mode**
- D. WPA3-Personal and MAC-Auth

Answer: C

NEW QUESTION # 30

What does the NIST model for digital forensics define?

- A. which data encryption and authentication algorithms are suitable for enterprise networks in a world that is moving toward quantum computing
- B. which types of architecture and security policies are best equipped to help companies establish a Zero Trust Network (ZTN)
- C. **how to properly collect, examine, and analyze logs and other data, in order to use it as evidence in a security investigation**
- D. how to define access control policies that will properly protect a company's most sensitive data and digital resources

Answer: C

Explanation:

The National Institute of Standards and Technology (NIST) provides guidelines on digital forensics, which include methodologies for properly collecting, examining, and analyzing digital evidence. This framework helps ensure that digital evidence is handled in a manner that preserves its integrity and maintains its admissibility in legal proceedings:

Digital Forensics Process: This process involves steps to ensure that data collected from digital sources can be used reliably in investigations and court cases, addressing chain-of-custody issues, proper evidence handling, and detailed documentation of forensic procedures.

NEW QUESTION # 31

Refer to the exhibit.

You need to ensure that only management stations in subnet 192.168.1.0/24 can access the ArubaOS-Switches' CLI, Web UI, and REST interfaces. The company also wants to let managers use these stations to access other parts of the network. What should you do?

- A. Specify vlan 100 as the management vlan for the switches.
- B. Establish a Control Plane Policing class that selects traffic from 192.168.1.0/24.

- C. Specify 192.168.1.0.255.255.255.0 as authorized IP manager address
- D. Configure the switch to listen for these protocols on OOBM only.

Answer: C

Explanation:

To ensure that only management stations in the subnet 192.168.1.0/24 can access the ArubaOS-Switches' Command Line Interface (CLI), Web UI, and REST interfaces, while also allowing managers to access other parts of the network, you should specify 192.168.1.0 255.255.255.0 as the authorized manager IP address on the switches. This configuration will restrict access to the switch management interfaces to devices within the specified IP address range, effectively creating a management access list.

NEW QUESTION # 32

You are managing an Aruba Mobility Controller (MC). What is a reason for adding a "Log Settings" definition in the ArubaOS Diagnostics > System > Log Settings page?

- A. Configuring a filter that you can apply to a defined Syslog server in order to filter events by subcategory
- B. Configuring the MC to generate logs for a particular event category and level, but only for a specific user or AP.
- C. Configuring the log facility and log format that the MC will use for forwarding logs to all Syslog servers
- D. Configuring the Syslog server settings for the server to which the MC forwards logs for a particular category and level

Answer: D

Explanation:

The primary reason for adding a "Log Settings" definition in the ArubaOS Diagnostics > System > Log Settings page is to configure the Syslog server settings for the server to which the Mobility Controller (MC) forwards logs for a particular category and level. This setting enables the MC to send detailed logs to a Syslog server for centralized logging and monitoring, which is essential for troubleshooting, security analysis, and compliance with various policies.

References:
ArubaOS documentation on log management and Syslog configuration.

NEW QUESTION # 33

A company has Aruba Mobility Controllers (MCs), Aruba campus APs, and ArubaOS-CX switches. The company plans to use ClearPass Policy Manager (CPPM) to classify endpoints by type. The company is contemplating the use of ClearPass's TCP fingerprinting capabilities.

What is a consideration for using those capabilities?

- A. You will need to mirror traffic to one of CPPM's span ports from a device such as a core routing switch.
- B. TCP fingerprinting of wireless endpoints requires a third-party Mobility Device Management (MDM) solution.
- C. ArubaOS-CX switches do not offer the support necessary for CPPM to use TCP fingerprinting on wired endpoints.
- D. ClearPass admins will need to provide the credentials of an API admin account to configure on Aruba devices.

Answer: A

Explanation:

ClearPass Policy Manager (CPPM) uses various methods to classify endpoints, and one of them is TCP fingerprinting, which involves analyzing TCP/IP packets to identify the type of device or operating system sending them. To utilize TCP fingerprinting capabilities, network traffic needs to be accessible to the CPPM. This can be done by mirroring traffic to CPPM's span port from a device that can see the traffic, like a core routing switch. This approach allows CPPM to observe the TCP characteristics of devices as they communicate over the network, enabling it to make more accurate decisions for device classification.

NEW QUESTION # 34

.....

From the Itcertkey platform, you will get the perfect match HPE6-A78 actual test for study. HPE6-A78 practice download pdf are researched and produced by Professional Certification Experts who are constantly using industry experience to produce precise, and logical HPE6-A78 Training Material. HPE6-A78 study material is constantly beginning revised and updated for relevance and

accuracy. You will pass your real test with our accurate HPE6-A78 practice questions and answers.
