SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q57-Q62):

NEW QUESTION # 57
Which Widgets can visualize process flows by backtracking the performed events? Note: There are 2 correct answers to this question.

- A. Correlation
- B. Variant Explorer
- C. Process Discovery
- D. Breakdown

Answer: B,C

Explanation:

Process Mining in SAP Signavio focuses on reconstructing and visualizing process flows based on event logs.
The documentation specifies:
* Option C (Variant Explorer):The Variant Explorer Widget visualizes different process variants by backtracking events in the event log, showing the sequence of activities and their frequencies. It helps identify common and deviant process paths.
* Option D (Process Discovery):The Process Discovery Widget automatically generates process models by backtracking performed events, providing a visual representation of the actual process flow based on event log data.
* Option A (Correlation)is incorrect as it focuses on identifying relationships between process attributes, not visualizing process flows.
Reference:SAP Signavio Process Intelligence Documentation, section on Process Mining Widgets; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 5: Process Mining Visualization.

NEW QUESTION # 58
What can create a deadlock in process modelled?

- A. A loop has been odelled.
- B. A merging exclusive gateway receives multiple tokens.
- C. A parallel merging gateway expects more tokens than existing.
- D. One of many tokens receives the end event.

Answer: C

NEW QUESTION # 59
When managing SAP Signavio Process Manager, what are essential aspects to consider for ensuring data security? (Choose two)

- A. Regular updates to process models
- B. Encryption of stored data
- C. Use of strong passwords for database access
- D. Role-based access to process information

Answer: B,D

NEW QUESTION # 60
What is a core capability of the transaction code analysis?

- A. It can show the average ways processes are executed in a particular company code
- B. It can check the number of transaction codes used on average for one end-to-end process
- C. It can show the various ways processes are executed in reality across the entire organization
- D. It can check the number of transaction codes used on average for each process step and by company code

Answer: D

Explanation:
Transaction code analysis in SAP Signavio Process Intelligence examines the usage of transaction codes in SAP systems to understand process execution. The documentation details:
* Exact Extract:"Transaction code analysis provides insights into the number of transaction codes used on average for each process step, segmented by company code, to identify variations in process execution across organizational units." (SAP Signavio Process Intelligence User Guide, section on
"Transaction Code Analysis").
* Explanation:
* Option B (It can check the number of transaction codes used on average for each process step and by company code):This is correct as transaction code analysis breaks down the usage of SAP transaction codes (e.g., VA01 for sales order creation) per process step and company code, highlighting differences in how processes are executed.
* Option A (It can check the number of transaction codes used on average for one end-to-end process)is incorrect as the analysis focuses on individual steps, not the entire process.
* Option C (It can show the various ways processes are executed in reality across the entire organization)is incorrect because this is a function of Process Discovery or Variant Explorer, not transaction code analysis.
* Option D (It can show the average ways processes are executed in a particular company code)is incorrect as it describes process

variants, not transaction code usage.
Reference:SAP Signavio Process Intelligence User Guide, section on "Transaction Code Analysis"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Process Analysis Tools.

NEW QUESTION # 61

Which Widget is automatically created after creating a new investigation?

- A. Process Discovery
- B. Variant Explorer
- C. Process Funnel
- D. Case Table

Answer: A

Explanation:
When a new investigation is created in SAP Signavio Process Intelligence, a default widget is automatically generated to provide an initial view of the process. The documentation states:
* Option A (Process Discovery):The Process Discovery Widget is automatically created upon starting a new investigation. It visualizes the process flow derived from the event log, providing a starting point for process analysis.
* Option B (Case Table)is incorrect as the Case Table Widget is not automatically created; it can be added manually to display case-level details.
* Option C (Process Funnel)is incorrect because the Process Funnel Widget requires manual configuration and is not a default widget.
Reference:SAP Signavio Process Intelligence User Guide, section on "Investigation Setup and Default Widgets"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Investigation Configuration.

NEW QUESTION # 62

......

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status.
