CompTIA Security+ Certification Exam Sample Questions (Q551-Q556):

NEW QUESTION # 551

A security professional discovers a folder containing an employee's personal information on the enterprise's shared drive. Which of the following best describes the data type the security professional should use to identify organizational policies and standards concerning the storage of employees' personal information?

- A. Legal
- B. Privacy
- C. Financial
- D. Intellectual property

Answer: B

Explanation:
Detailed Privacy data includes information such as Personally Identifiable Information (PII), which relates to employees' or customers' personal data. Organizations often maintain policies and standards specifically addressing how such sensitive information should be handled. NEW QUESTION # 552

Which of the following agreement types defines the time frame in which a vendor needs to respond?

- A. MOA
- B. SOW
- C. MOU
- D. SLA

Answer: D

Explanation:
A service level agreement (SLA) is a type of agreement that defines the expectations and responsibilities between a service provider and a customer. It usually includes the quality, availability, and performance metrics of the service, as well as the time frame in which the provider needs to respond to service requests, incidents, or complaints. An SLA can help ensure that the customer receives the desired level of service and that the provider is accountable for meeting the agreed-upon standards.

NEW QUESTION # 553

A U.S.-based cloud-hosting provider wants to expand its data centers to new international locations. Which of the following should the hosting provider consider first?

- A. Time zone differences in log correlation
- B. Risks from hackers residing in other countries
- C. Local data protection regulations
- D. Impacts to existing contractual obligations

Answer: C

Explanation:
Local data protection regulations are the first thing that a cloud-hosting provider should consider before expanding its data centers to new international locations. Data protection regulations are laws or standards that govern how personal or sensitive data is collected, stored, processed, and transferred across borders.
Different countries or regions may have different data protection regulations, such as the General Data Protection Regulation (GDPR) in the European Union, the Personal Information Protection and Electronic Documents Act (PIPEDA) in Canada, or the California Consumer Privacy Act (CCPA) in the United States.
A cloud-hosting provider must comply with the local data protection regulations of the countries or regions where it operates or serves customers, or else it may face legal penalties, fines, or reputational damage.
Therefore, a cloud-hosting provider should research and understand the local data protection regulations of the new international locations before expanding its data centers there. NEW QUESTION # 554

Which of the following threat actors would most likely target an organization by using a logic bomb within an internally-developed application?

- A. Trusted insider
- B. Nation-state
- C. Organized crime group
- D. Hacktivist

Answer: A

Explanation:
A logic bomb is a malicious code segment hidden inside legitimate software that triggers under specific conditions (dates, system states, user actions). Because logic bombs require direct access to source code or the development environment, the most likely attacker is a trusted insider-especially a disgruntled developer or administrator with the ability to modify internal applications.
Security+ SY0-701 emphasizes that insider threats have:
* Elevated access
* Knowledge of internal systems
* Ability to manipulate production code
* Motivation driven by revenge, termination, or personal grievances
These factors make insiders uniquely capable of embedding logic bombs into internally-developed applications.
Nation-state actors (A) typically target critical infrastructure or advanced espionage, not internal business apps. Organized crime groups (C) seek financial gain and generally do not have internal code access.
Hacktivists (D) focus on ideological disruption, typically through external attacks, not internal code manipulation.
Thus, the threat actor most likely to plant a logic bomb in internal software is B: Trusted insider.

NEW QUESTION # 555

Which of the following best describe the benefits of a microservices architecture when compared to a monolithic architecture?
(Choose two.)

- A. Easier debugging of the system
- B. Reduced cost of ownership of the system
- C. Increased compartmentalization of the system
- D. Reduced complexity of the system
- E. Improved scalability of the system
- F. Stronger authentication of the system

Answer: C,E
