

Trusted Latest Test AB-Abdomen Simulations & Useful ARDMS Certification Training - Trustworthy ARDMS Abdomen Sonography Examination

P.S. Free 2026 ARDMS AB-Abdomen dumps are available on Google Drive shared by Lead2Passed:
https://drive.google.com/open?id=1GKGBGXMz9c3AWruiPcY17o1_SO26bKhp

Lead2Passed is regarded as an acclaimed AB-Abdomen dumps study material provider for certification exams that includes a range of helping materials, programs and pathways to ease your tensions of AB-Abdomen exam preparation. The prime objective in developing AB-Abdomen exam dumps is to provide you the unique opportunity of getting the best information in the possibly lesser content. It not only saves your time but also frees you from the hassle of going through tomes of books and other study material. Shorn of unnecessary burden, you better focus what is extremely important to pass exam; hence you increase your chances of success with AB-Abdomen Exam Questions than other that of candidates.

We know deeply that a reliable AB-Abdomen exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our AB-Abdomen latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient AB-Abdomen study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our AB-Abdomen exam material (only about 20 to 30 hours practice).

Valid AB-Abdomen Exam Syllabus, Reliable AB-Abdomen Dumps Book

What is more difficult is not only passing the ARDMS AB-Abdomen Certification Exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the Abdomen Sonography Examination certification. If you are going through the same tough challenge, do not worry because ARDMS is here to assist you.

ARDMS Abdomen Sonography Examination Sample Questions (Q142-Q147):

NEW QUESTION # 142

Which condition is most likely associated with a common bile duct measuring 5 mm?

- A. Normal
- B. Obstruction
- C. Sclerosis
- D. Stricture

Answer: A

Explanation:

A common bile duct (CBD) measuring up to 5 mm is considered normal in most patients under age 60. Some references allow for up to 6 mm, especially post-cholecystectomy or in older individuals. Significant dilation (suggestive of obstruction) typically exceeds these measurements.

According to Rumack's Diagnostic Ultrasound:

"The normal common bile duct measures up to 5-6 mm, with slight increases considered normal after cholecystectomy or with advancing age." Reference:

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

AIUM Practice Parameter for Abdominal Ultrasound, 2020.

NEW QUESTION # 143

Which condition is most consistent with the findings in the image below?

□

- A. Emphysematous cholecystitis
- B. Adenomyomatosis
- C. Gangrenous cholecystitis
- D. Porcelain gallbladder

Answer: A

Explanation:

The ultrasound image shows echogenic foci with dirty shadowing and reverberation artifacts within the gallbladder wall and lumen. These features are characteristic of emphysematous cholecystitis, a severe, life-threatening variant of acute cholecystitis caused by gas-forming organisms (e.g., Clostridium or E. coli) infecting the gallbladder wall.

Sonographic features of emphysematous cholecystitis:

- * Echogenic gas within the gallbladder wall or lumen
- * Reverberation or "dirty" shadowing artifacts
- * May show intramural gas bubbles or "ring-down" artifact
- * Often seen in diabetic or immunocompromised patients
- * No gallstones may be present ("acalculous cholecystitis")

Clinical context:

- * More common in elderly men and diabetics
- * Presents with right upper quadrant pain, fever, and leukocytosis
- * Surgical emergency due to risk of perforation and sepsis

Differentiation from other options:

- * A. Adenomyomatosis: Involves gallbladder wall thickening with "comet tail" artifacts due to Rokitsansky-Aschoff sinuses, not intramural gas.
- * B. Porcelain gallbladder: Shows curvilinear calcification of the gallbladder wall - dense echogenic rim with posterior shadowing.
- * C. Gangrenous cholecystitis: May show wall irregularity, intraluminal membranes, and absence of Doppler flow but lacks intramural gas.

NEW QUESTION # 144

Based on this image, which congenital anomaly should be suspected?

□

- A. Annular pancreas
- B. Supernumerary kidney
- C. Horseshoe kidney
- D. Pancreas divisum

Answer: A

Explanation:

The ultrasound image demonstrates a dilated duodenum with a hypoechoic soft tissue structure encircling it.

This is a classic sonographic appearance suggestive of an annular pancreas. In annular pancreas, pancreatic tissue completely or

partially encircles the second portion of the duodenum, which can lead to duodenal narrowing or obstruction.

Annular pancreas is a congenital anomaly that results from failure of the ventral pancreatic bud to rotate properly during embryologic development. As a result, pancreatic tissue encircles the duodenum. It may present in neonates with symptoms of duodenal obstruction or in adults with abdominal pain, pancreatitis, or vomiting.

Ultrasound Findings:

- * Hypoechoic pancreatic tissue encircling the duodenum
- * Evidence of duodenal dilatation proximal to the obstruction
- * "Double bubble" sign may be seen in neonates

Differentiation from other options:

- * A. Supernumerary kidney: Refers to an accessory kidney. It would be seen in the retroperitoneum and is unrelated to the duodenum or pancreas.
- * B. Pancreas divisum: A ductal anomaly best diagnosed on MRCP or ERCP. It is not typically visible on conventional ultrasound.
- * D. Horseshoe kidney: A renal fusion anomaly where the lower poles of the kidneys are fused. It is seen in the pelvis or lower abdomen and does not involve the duodenum or pancreas.

NEW QUESTION # 145

Which abnormality is the most common adult adrenal tumor?

- A. Pheochromocytoma
- B. Adrenal cortical carcinoma
- C. Neuroblastoma
- **D. Adenoma**

Answer: D

Explanation:

Adrenal adenomas are the most common adrenal tumors in adults. They are often discovered incidentally (adrenal incidentalomas) and are usually nonfunctioning, though some may secrete cortisol or aldosterone.

Neuroblastoma is common in children, pheochromocytomas are rarer catecholamine-producing tumors, and adrenal cortical carcinoma is malignant but much less common than adenomas.

According to Rumack's Diagnostic Ultrasound:

"Adrenal adenomas are the most common adrenal masses in adults, frequently identified incidentally on imaging studies." Reference:

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

ACR Incidental Findings Committee Guidelines for Adrenal Masses, 2017.

-

NEW QUESTION # 146

Which condition is a cause of intrahepatic dilatation with a normal common bile duct?

- A. Choledocholithiasis
- **B. Tumor at the porta hepatis**
- C. Acute pancreatitis
- D. Portal vein thrombus

Answer: B

Explanation:

Intrahepatic biliary dilatation with a normal common bile duct (CBD) is typically caused by obstruction located at or above the level of the hepatic duct confluence. A tumor at the porta hepatis, such as cholangiocarcinoma (Klatskin tumor), is a classic cause of this pattern. The porta hepatis is the site where the right and left hepatic ducts join to form the common hepatic duct. A mass at this location can obstruct the intrahepatic ducts while leaving the distal CBD unaffected and of normal caliber.

By contrast:

- * Portal vein thrombus (A) affects vascular flow but does not directly obstruct bile ducts.

- * Cholelithiasis (C) obstructs the CBD, typically resulting in both intrahepatic and extrahepatic duct dilatation.
- * Acute pancreatitis (D) may cause distal CBD compression if there is associated inflammation or pseudocyst formation, but typically results in extrahepatic duct dilatation rather than isolated intrahepatic dilation.

Reference Extracts:

* Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound, 5th ed. Elsevier, 2017.

Chapter: Biliary Tract: "Klatskin tumors cause proximal (intrahepatic) biliary dilatation while the distal bile duct remains normal in caliber."

NEW QUESTION # 147

.....

The software version is one of the different versions that is provided by our company, and the software version of the AB-Abdomen study materials is designed by all experts and professors who employed by our company. We can promise that the superiority of the software version is very obvious for all people. It is very possible to help all customers pass the AB-Abdomen Exam and get the related certification successfully.

Valid AB-Abdomen Exam Syllabus: <https://www.lead2passed.com/ARDMS/AB-Abdomen-practice-exam-dumps.html>

We can provide you with the reliable and excellent AB-Abdomen latest torrent for you and our experts update the ARDMS AB-Abdomen latest pdf vce every day to make sure the latest version for you, If you choose to buy our AB-Abdomen study pdf torrent, it is no need to purchase anything else or attend extra training. All these three ARDMS AB-Abdomen exam questions formats contain the real and updated AB-Abdomen exam questions.

In portrait photography the goal is to connect with your subject and capture AB-Abdomen a bit of the subject's spirit or character in a photograph, Well, acceleration is change in velocity/time with a direction to modify it.

ARDMS Latest Test AB-Abdomen Simulations: Abdomen Sonography Examination - Lead2Passed Purchasing Safely and Easily

We can provide you with the reliable and excellent AB-Abdomen Latest Torrent for you and our experts update the ARDMS AB-Abdomen latest pdf vce every day to make sure the latest version for you.

If you choose to buy our AB-Abdomen study pdf torrent, it is no need to purchase anything else or attend extra training. All these three ARDMS AB-Abdomen exam questions formats contain the real and updated AB-Abdomen exam questions.

Please remember us Lead2Passed AB-Abdomen study guide, It is no use of wasting money on unreliable study sources.
