Fortinet NSE 6 - OT Security 7.6 Architect Sample Questions (Q105-Q110):

NEW QUESTION # 105

Refer to the exhibit. A new operational technology rule is being created to monitor Modbus protocol traffic on FortiSIEM. Which action will ensure all Modbus messages on the network match the rule?

Edit SubPattern

Name: industrial_protocol_monitor

Filters:

Paren	Attribute	Operator	Value	Paren	Next	Row
+	Destination TCP/UDP Port	IN	Group: OT Ports	+	OR	+

Aggregate:

Paren	Attribute	Operator	Value	Paren	Next	Row
+	COUNT(Matched Events)	=>	1	+	AND	+

Group By:

Attribute	Row	Move
Source TCP/UDP Port	+	↑ ↓
Destination TCP/UDP Port	+	↑ ↓
Event Type	+	↑ ↓
Reporting IP	+	↑ ↓

- A. Set the Aggregate attribute value to equal to or greater than zero.
- **B. Add a new condition to filter Modbus traffic based on the Source TCP/UDP port.**
- C. Remove attributes in the Group By section that are not configured in the Filter section.
- D. This rule is valid and requires no additional changes.

Answer: B

NEW QUESTION # 106

An OT network architect needs to secure control area zones with a single network access policy to provision devices to any number of different networks. On which device can this be accomplished?

- A. FortiNAC
- B. FortiSwitch
- C. FortiEDR
- **D. FortiGate**

Answer: D

Explanation:

Network Access Policies are used to dynamically provision access to connecting endpoints, based on the matched user/host profiles associated with the network access configuration.

NEW QUESTION # 107

Refer to the exhibit.

The OT devices behind the ruggedized FortiGate have vulnerabilities and you want to apply a virtual patching profile in the firewall policy. Why is Virtual Patching not available in the Security Profiles section? (Choose one answer)

- A. You must enable Virtual Patching in the Feature Visibility section.
- B. You must have a ruggedized FortiGate allowing the virtual patching feature.
- C. You must enable OT signatures.
- D. You must have a valid OT security service license.

Answer: A

Explanation:

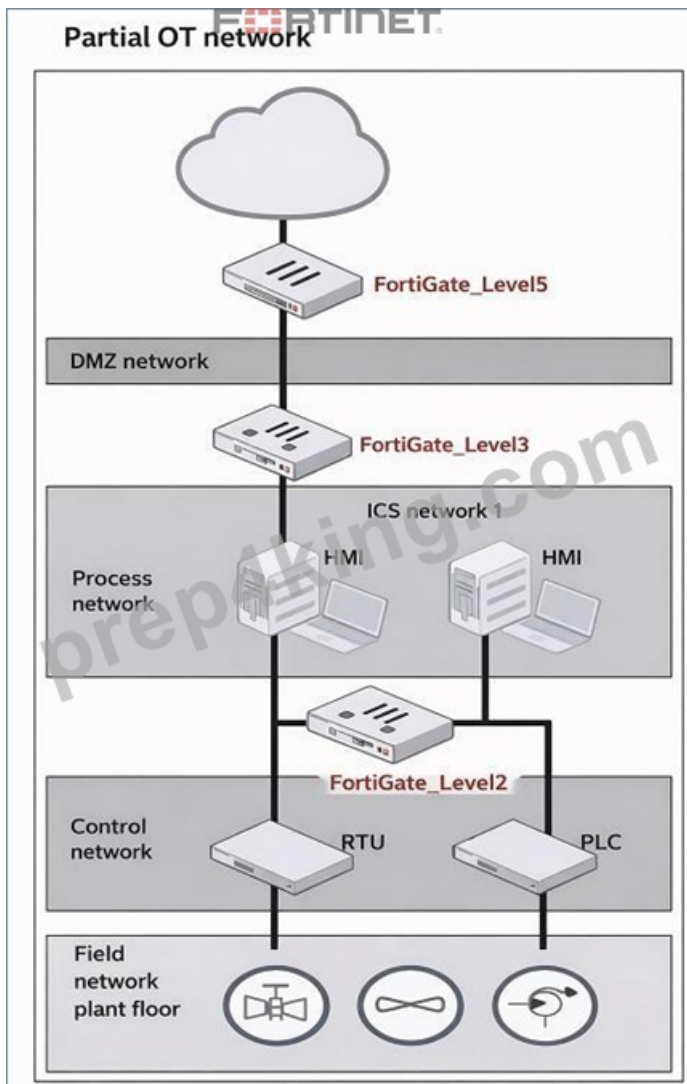

The correct answer is A. You must enable Virtual Patching in the Feature Visibility section.

The study guide states clearly that "By default, virtual patching profiles are hidden on the GUI, and you must enable them through System > Feature Visibility." That exactly matches the situation in the exhibit, where Virtual Patching does not appear under Security Profiles. So the issue is not that the feature is unsupported, but that it is simply hidden in the GUI until it is enabled.

The other options do not answer the question being asked. A valid OT security service license is required for virtual patching signatures and protection workflow, and OT signatures are relevant to IPS-based OT protection, but those do not explain why the menu item itself is missing from the Security Profiles section. The guide specifically identifies Feature Visibility as the reason the Virtual Patching profile is not shown in the GUI. Therefore, the required action is to enable Virtual Patching in System > Feature Visibility.

NEW QUESTION # 108

Refer to the exhibit. A partial OT network is shown.

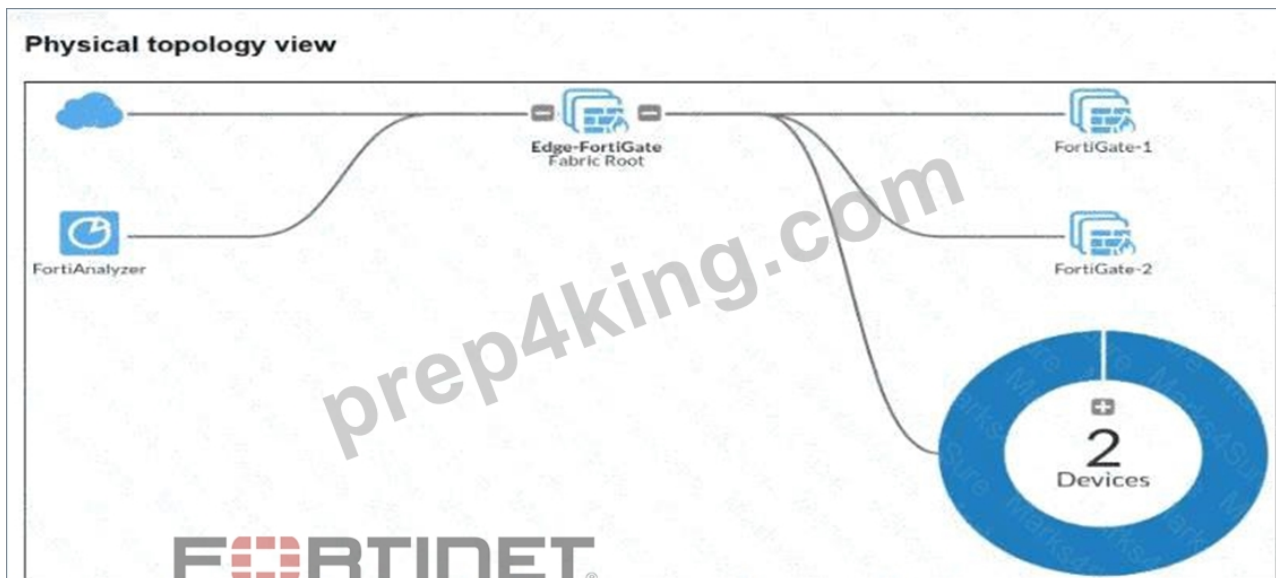

In this OT network, you must add additional security measures to detect OT protocols and, therefore, increase the traffic visibility. Which security sensor must you implement to detect the OT protocols in this network? (Choose one answer)

- A. Application sensor set to monitor on all the FortiGate devices
- B. Inline IDS on FortiGate_Level3
- C. Device detection on all the FortiGate interfaces
- D. IPS sensor on FortiGate Level5

Answer: A

NEW QUESTION # 109

Refer to the exhibit.

Why is the OT View tab not available in the Asset Identity Center section of the FortiGate-1 device? (Choose one answer)

- A. The OT View tab is only available on the root FortiGate.
- B. Device Detection is not enabled on the FortiGate-1 interface.
- **C. You must enable the Purdue Levels feature on the FortiGate-1 device.**
- D. You must enable Security Fabric Connection on the interfaces of the FortiGate-1 device.

Answer: C

Explanation:

The correct answer is A . The study guide states that "The OT view is not available by default. You must enable it in the Feature Visibility section of the GUI or using the CLI command shown on this slide" and shows config system settings # set gui-ot enable . It also says that "After you enable the feature, the Asset Identity Center contains an Asset Identity List tab and an OT View tab." This directly explains why the OT View tab is missing: the feature that enables the Purdue-style OT display has not been enabled yet. The OT View is the view that displays devices in a Purdue diagram, and the Asset Identity List also shows the current Purdue level for each device. Because the answer options do not explicitly say enable OT View in Feature Visibility , option A is the intended match, since it refers to enabling the Purdue-related OT display feature. Option B is incorrect because device detection affects visibility of devices, not whether the OT View tab exists. Option C is not supported by the study guide, and option D is also not given as the requirement for showing the OT View tab.
