FCP_FMG_AD-7.6 Test Engine Version & Valid FCP_FMG_AD-7.6 Study Guide

The process of getting a certificate isn't an easy process for many of the candidates. We will provide you with the company in your whole process of preparation in the FCP_FMG_AD-7.6 learning materials. You will find that you are not the only yourself, you also have us, our service staff will offer you the most considerate service, and in the process of practicing the FCP_FMG_AD-7.6 Training Materials, if you have any questions please contact us, we will be very glad to help you.

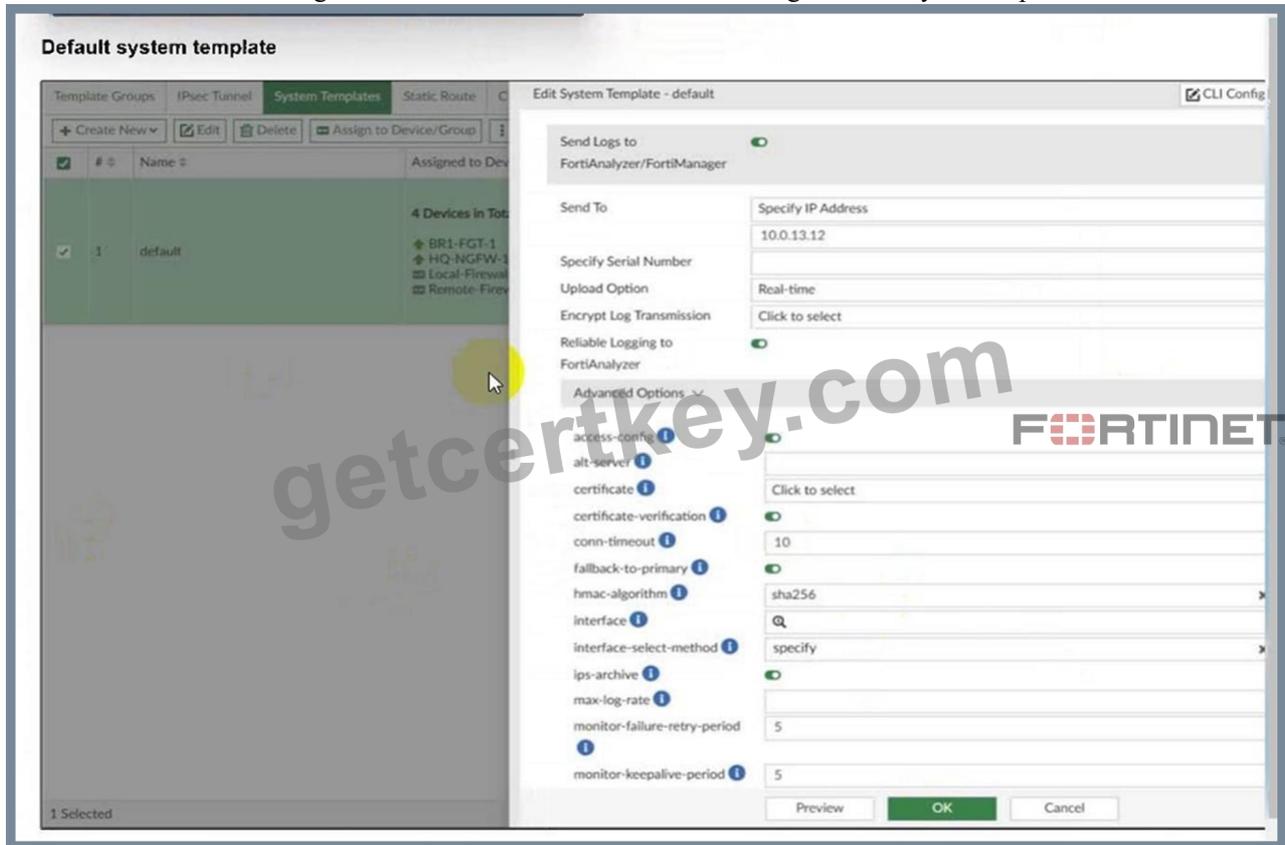

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q69-Q74):

NEW QUESTION # 69

Refer to the exhibit. An administrator has assigned the default system template to install all devices with the FortiAnalyzer IP address 10.0.13.12.

However, not all FortiGate devices can reach FortiAnalyzer using the default interface. Some devices may use the LAN interface, while others may use the WAN interface.

How can the administrator change the source interface for FortiGate devices using the default system template?

- A. Create a different system template for each FortiGate, if the configuration is different.
- B. Configure a metadata variable at the ADOM level and use it in the template.
- C. Use per-device dynamic object configurations at the ADOM level and apply them in the template.
- D. Create a meta field on FortiManager system settings of type Device and use it in the template.

Answer: B

Explanation:

Since the field "interface" has the magnifying glass icon, it means that you can use a metadata variable calling it the "\$" symbol.

NEW QUESTION # 70

Refer to the exhibit. Which two statements about the output are true? (Choose two.)

```
FortiManager # diagnose dvm device list
--- There are currently 6 devices/vdoms managed ---
--- There are currently 6 devices/vdoms count for license ---

TYPE          OID   SN              HA   IP           NAME          ADOM   IPS          FIRMWARE   HW_GenX
fmgfaz-managed 188   FGV02TM24013504 -   100.65.1.111 BR1-FGT-1    My_ADOM  7.0 MR6 (3401) N/A
|- STATUS: dev-db: not modified; conf: in sync; cond: pending; dm: installed; conn: up; template:[modified]default
|- vdom:[3]root flags:0 adom:My_ADOM pkg:[imported]BR1-FGT-1
```

- A. Configuration changes have been installed on FortiGate, updating policy and device-level database.
- B. The latest revision history for the managed FortiGate does match the FortiManager policy database.
- C. The latest revision history for the managed FortiGate does not match the device-level database.
- D. The system template default will override device-level database configurations.

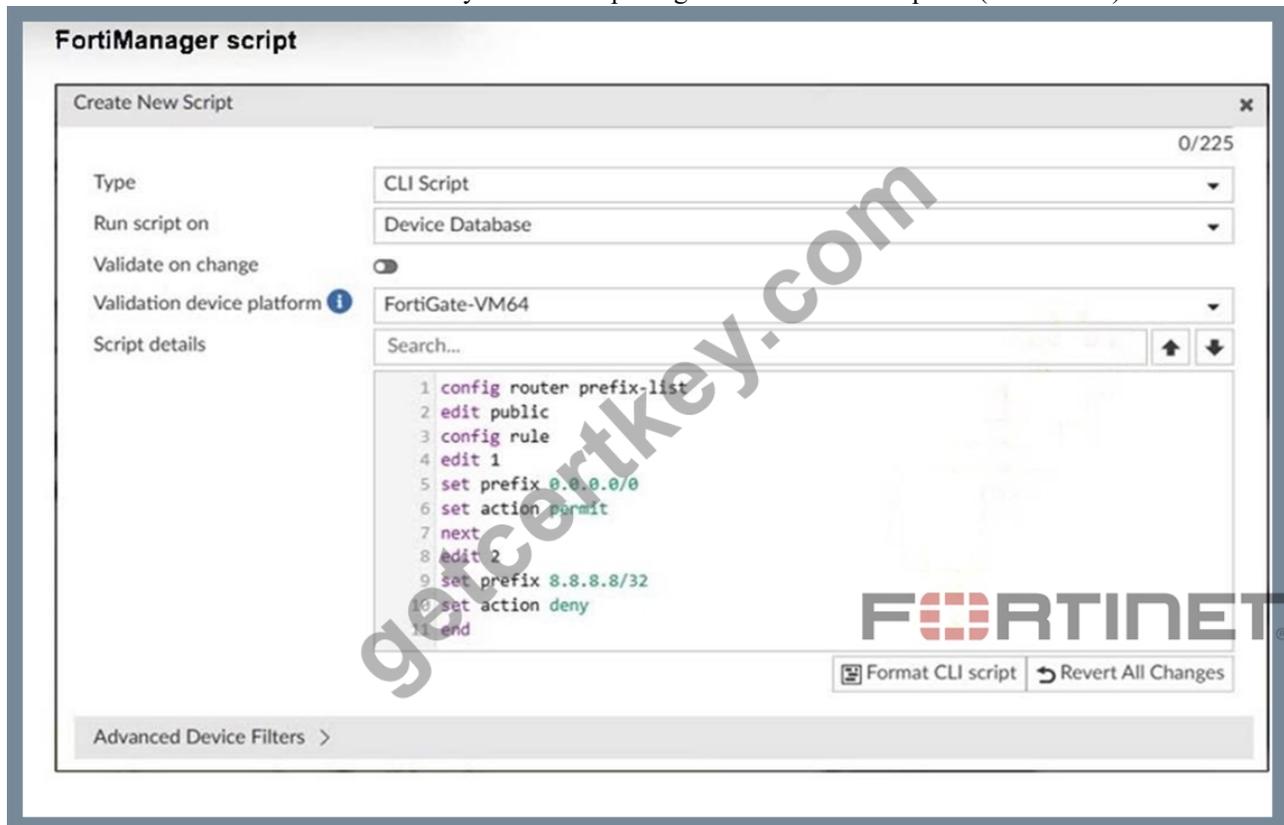

Answer: B,C

Explanation:

- conf: in sync - This is the sync status which shows that the latest revision history is in sync with Fortigate's configuration. There is a new modification on FortiManager device level DB (dev-db: modified) which wasn't installed to FortiGate (cond: pending).

NEW QUESTION # 71

Refer to the exhibit. Which two results occur if you run the script using the Device Database option? (Choose two.)

- A. The successful execution of a script on the Device Database creates a new revision history.
- B. The device Config Status is tagged as Modified.
- C. The script history shows the successful installation of the script on the remote FortiGate.
- D. The administrator must install these changes on a managed device using the Install Wizard.

Answer: B,D

Explanation:

Running a script on the Device Database marks the configuration as modified but does not immediately apply changes to the device. The administrator must use the Install Wizard to push and install these changes from the Device Database onto the managed device.

NEW QUESTION # 72

An administrator wants to configure and manage multiple objects in the FortiManager database and give access to other users who work in the same database.

To stay in control of the changes made to firewall policies by other team members, the administrator needs a setup where all modifications go through a central check before they can be installed.

How can the administrator create this setup?

- A. Enable the prompt asking the administrator to accept firewall policies changes before saving.
- B. Enable device lock and the advanced mode feature in the ADOM.
- C. Enable the workspace (for all ADOMs) to control all changes made by any administrator.
- D. Enable workflow mode and the ADOM lock feature.

Answer: D

Explanation:

Enabling workflow mode along with the ADOM lock feature ensures that all configuration changes go through a centralized review and approval process before installation, allowing controlled and coordinated management of firewall policies by multiple administrators.

NEW QUESTION # 73

Refer to the exhibits. An administrator added BR1-FGT-1 to FortiManager and started importing the policy package. During the process, they saw that they need to choose values from FortiGate or FortiManager.

Which conclusion is most clearly supported by the exhibits?

Import device window

The screenshot shows the 'Import Device - BR1-FGT-1 - Object Conflicts (3/5)' window. It contains a table with the following data:

Category	Name	Use Value From	Action
Webfilter Profile (1)	default	FortiGate FortiManager	View Conflict
Firewall Profile-Protocol-Options (1)	default	FortiGate FortiManager	View Conflict
Firewall SSL-SSH-Profile (1)	no-inspection	FortiGate FortiManager	View Conflict

At the bottom of the window, there are 'Next >' and 'Cancel' buttons. A red box highlights the 'View Conflict' buttons for each row.

View conflict windows

The three screenshots show the configuration for the following objects:

- Webfilter Profile (1) default:** Shows settings for 'webfilter_prof_ftgd_wf' and 'webfilter_prof_ftgd_wf_filters'. The 'action' is set to 'block' for FortiGate and 'monitor' for FortiManager.
- Firewall Profile-Protocol-Options (1) default:** Shows a 'comment' field with the text 'All default services. All services.'.
- Firewall SSL-SSH-Profile (1) no-inspection:** Shows settings for 'fw_ssl_ssh_profile_https' (ports: 443) and 'fw_ssl_ssh_prof_dot'. The 'quic' protocol is set to 'inspect' for FortiGate and 'bypass' for FortiManager.

- A. The administrator must match the FortiOS firmware version with the FortiManager ADOM firmware version to resolve the conflict status.
- **B. The default Firewall Profile-Protocol-Options object is the only profile that does not significantly affect any configuration changes on either FortiManager or FortiGate.**
- C. BR1-FGT-1 does not support the SSL/SSH profile with HTTPS on port 443.
- D. FortiManager has a different FortiGuard database compared to FortiGate BR1-FGT-1 for the QUIC protocol.

Answer: B

Explanation:

The conflict is only the comment. It doesn't affect any important configuration.

NEW QUESTION # 74

.....

As is known to us, if there are many people who are plugged into the internet, it will lead to unstable state of the whole network, and you will not use your study materials in your lunch time. If you choose our FCP_FMG_AD-7.6 exam question as your study tool, you will not meet the problem. Because the app of our FCP_FMG_AD-7.6 Exam Prep supports practice offline in anytime. If you buy our products, you can also continue your study when you are in an offline state. You will not be affected by the unable state of the whole network. You can choose to use our FCP_FMG_AD-7.6 exam prep in anytime and anywhere.
