

100% Pass Quiz Cisco - 300-640 - Newest New Implementing Cisco Data Center AI Infrastructure Test Discount

We are a comprehensive service platform aiming at help you to pass 300-640 exams in the shortest time and with the least amount of effort. As the saying goes, an inch of gold is an inch of time. The more efficient the 300-640 study guide is, the more our candidates will love and benefit from it. It is no exaggeration to say that you can successfully pass your exams with the help our 300-640 learning torrent just for 20 to 30 hours even by your first attempt.

Immediately after you have made a purchase for our 300-640 practice dumps, you can download our exam study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for 300-640 Training Materials, the higher possibility you will pass the exam. As you can see, we have invested big amount of money to give the most convinience for you to get our 300-640 exam braindumps.

Provides Excellent 300-640 Prep Guide for 300-640 Exam - ExamsTorrent

At the beginning of the launch of our 300-640 exam torrent, they made a splash in the market. We have three versions which are the sources that bring prestige to our company. Our PDF version of Implementing Cisco Data Center AI Infrastructure prepare torrent is suitable for reading and printing requests. You can review and practice with it clearly just like using a professional book. It can satisfy the fundamental demands of candidates with concise layout and illegible outline. The second one of 300-640 Test Braindumps is software versions which are usable to windows system only with simulation test system for you to practice in daily life. The last one is app version of 300-640 exam torrent suitable for different kinds of electronic products.

Cisco Implementing Cisco Data Center AI Infrastructure Sample Questions (Q67-Q72):

NEW QUESTION # 67

When considering a rail-only network design, when would adding spine switches make sense?

- A. when scaling out to support traffic between multiple scalable units
- B. when providing greater overall total bandwidth within a single scalable unit
- C. when increasing the overall available buffers that spines provide
- D. when needing a greater path redundancy within a single scalable unit

Answer: A

Explanation:

In a rail-only design, each scalable unit provides optimized east-west GPU communication within that unit. Spine switches are added when the design must scale beyond a single scalable unit and support traffic between multiple scalable units while preserving predictable performance for larger AI training environments.

NEW QUESTION # 68

A corporate network administrator manages a HyperFabric AI environment and wants to receive email notifications about assertions in the fabric. The administrator sets up a recipient email endpoint under the notification endpoints in the controller, but notifications are not received.

Which two configurations cause the issue? (Choose two.)

- A. The email server configuration is not configured using the DNS name.
- B. The DNS server IP is not defined in the controller.
- C. The recipient email address is not verified by the HyperFabric controller.
- D. The HyperFabric controller cannot reach the email server of the Acme Corporation.
- E. The fabric of interest and email endpoint are not configured in the default notification policy.

Answer: C,E

Explanation:

Email endpoints must be verified before they can receive HyperFabric notifications, and the endpoint must also be included with the relevant fabric in the notification policy. Creating the email endpoint alone does not activate assertion notifications for a fabric until both of these notification requirements are completed.

NEW QUESTION # 69

An end customer plans to deploy an AI fabric in a new data center. Their engineers are more familiar with CLI-based networks and require the capability to automate standardized configuration templates and monitor flows for the fabric. Which data center automation tool meets the requirements?

- A. Intersight
- B. HyperFabric
- C. Nexus Dashboard
- D. Digital Network Architecture Center

Answer: C

Explanation:

Nexus Dashboard is the Cisco data center automation and operations platform used with Nexus fabrics. It supports standardized fabric configuration through automation templates and provides visibility features such as flow monitoring, making it the appropriate tool for engineers who need CLI-oriented data center fabric operations with automation and telemetry.

NEW QUESTION # 70

A Cisco Nexus switch is configured with QoS policies for AI traffic. Which scheduling mechanism guarantees bandwidth for critical traffic classes during congestion?

- A. Port mirroring
- B. MAC filtering
- C. Weighted scheduling
- D. FIFO

Answer: C

Explanation:

Weighted scheduling allocates bandwidth according to configured priorities, ensuring critical AI traffic receives adequate forwarding resources during congestion. FIFO provides no prioritization, while MAC filtering and port mirroring are unrelated to congestion management or QoS scheduling.

NEW QUESTION # 71

An engineer must optimize the performance of an AI inference workload running on a Cisco UCS C-Series rack server. The workload experiences intermittent latency spikes, and Intersight system logs show frequent thermal event entries. Which troubleshooting action must be taken first to address the performance issues on the Cisco UCS server?

- A. Check the power supply status and power consumption of the UCS server using UCS Manager to ensure that the server has sufficient power.
- B. Examine the storage configuration, including the RAID configuration and disk health, to ensure that the storage subsystem is not causing latency issues.
- **C. Inspect the physical environment of the server, including ambient temperature and airflow, and replace any failed fans.**
- D. Review the resource utilization of the AI workload (CPU, memory, and GPU) to identify potential bottlenecks and optimize resource allocation.

Answer: C

Explanation:

Frequent thermal events indicate that the server may be throttling CPU or GPU performance to protect hardware from overheating. The first action is to verify the physical cooling conditions, including ambient temperature, airflow, and fan health, because resolving thermal constraints directly addresses the likely cause of intermittent latency spikes.
