

Accurate Answers and Realistic IBM C1000-185 Exam Questions for Your Best Preparation

What's more, part of that VCE4Plus C1000-185 dumps now are free: https://drive.google.com/open?id=1WQcsXtWDLYZiipB05BAPP4_u8oKjZ3TG

Using our reliable exam product can prove a helping hand for you to become IBM C1000-185 certified. Do not waste any more time because this C1000-185 exam dumps can be a turning point in your exam preparation journey. Remember that you cannot afford to suffer from C1000-185 Exam failure because the registration fee of the test is high and you will not want to spend this massive amount for the second attempt.

These IBM watsonx Generative AI Engineer - Associate (C1000-185) practice test questions are customizable and give real IBM watsonx Generative AI Engineer - Associate (C1000-185) exam experience. Windows computers support desktop software. The web-based C1000-185 Practice Exam is supported by all browsers and operating systems.

Pass Guaranteed C1000-185 - Accurate IBM watsonx Generative AI Engineer - Associate Valid Test Review

About the materials that relate to IBM C1000-185 exam, many websites can offer the exam materials. But these websites can't guarantee the quality of the exam dumps, meanwhile when you fail the exam, they can't also give you FULL REFUND guarantee. Compared with common reference materials, VCE4Plus IBM C1000-185 certification training materials is the tool that worth your use. With the help of VCE4Plus IBM C1000-185 Real Questions and answers, you can absolutely well prepare for the exam and pass the exam with ease. If you want to great development in IT industry, you need to take IT certification exam. If you want to pass your IT certification test successfully, it is necessary for you to use VCE4Plus exam dumps.

IBM watsonx Generative AI Engineer - Associate Sample Questions (Q214-Q219):

NEW QUESTION # 214

You are using IBM's Tuning Studio to optimize a generative AI model. The model performance on your validation set has plateaued, and you suspect that tuning certain parameters in the Tuning Studio will improve the outcome. Which of the following actions would be most effective in improving the model's performance?

- A. Use a larger validation set
- B. **Enable early stopping**
- C. Decrease the batch size
- D. Increase the number of epochs

Answer: B

NEW QUESTION # 215

You are tasked with building a generative AI model to help create automated marketing copy for a business. A key concern is the potential generation of biased or legally sensitive content, which could negatively impact the company's reputation. Which of the following strategies would be the most effective in mitigating these model risks?

- A. **Include fairness metrics in the model evaluation stage to monitor for biased outputs.**
- B. Use reinforcement learning to fine-tune the model based on user feedback to eliminate bias in the long term.
- C. Implement a post-processing filter to remove any potentially offensive or legally sensitive content.
- D. Use a comprehensive training dataset that includes diverse business domains to reduce biases.

Answer: A

NEW QUESTION # 216

You want a generative AI model to summarize a lengthy text in one sentence. You provide the following prompt: "Summarize the following paragraph in one sentence: 'Artificial intelligence (AI) is the simulation of human intelligence in machines that are programmed to think and learn. The field of AI includes everything from speech recognition to problem-solving and robotics.'" No prior examples are given.

What type of prompting is being used, and what are the expectations?

- A. Zero-shot prompting, but it requires the addition of a few examples for the model to generate a summary.
- B. Few-shot prompting, but the model will likely struggle without a few examples of summaries provided.
- C. **Zero-shot prompting, with the expectation that the model can summarize common concepts like AI due to pre-training.**
- D. Zero-shot prompting, but the model may fail without detailed instructions on what aspects of the text to focus on.

Answer: C

NEW QUESTION # 217

You are preparing a dataset for fine-tuning a model to classify customer complaints by category. The dataset is imbalanced, with 70% of the data representing complaints about billing, 20% representing complaints about technical issues, and 10% representing complaints about product quality.

Which of the following actions would help address the imbalance while preparing the dataset for fine-tuning? (Select two)

- A. **Apply class weighting during model training instead of modifying the dataset itself.**
- B. Undersample the majority class (billing complaints) to balance the dataset.
- C. **Oversample the under-represented classes to ensure a balanced distribution across categories.**
- D. Leave the dataset as-is, trusting the model to handle the imbalance using its internal mechanisms.
- E. Add more synthetic data for the minority classes by using generative techniques like GPT-3 to create realistic complaints.

Answer: A,C

NEW QUESTION # 218

You are developing an AI-driven application using IBM Watsonx and LangChain to automate legal document summarization for a law firm. The application needs to extract key legal points, summarize them, and generate insights from various sources, including external APIs, court databases, and private document repositories. You are tasked with creating a LangChain chain that integrates these sources, customizes prompt templates, and uses Large Language Models (LLMs) to provide legal summaries. The prompt template must allow for dynamic insertion of text from external sources and adapt based on the type of legal document.

Which LangChain chain design would best meet the needs of this application?

- A. Employ a Retrieval-Augmented Generation (RAG) Chain, where the LLM queries external knowledge sources in real-time while applying a fixed prompt template.
- B. **Use a SequentialChain that first extracts text from external APIs and databases, processes it through custom prompt templates, and then sends the final processed text to an LLM.**
- C. Implement a SimpleChain that retrieves the required data from external APIs and directly sends the text to the LLM without prompt templates.
- D. Design a ParallelChain where the text from different sources is processed in parallel by multiple LLMs, combining the results at the end.

Answer: B

NEW QUESTION # 219
