Appian ACD201 Prep Guide, ACD201 Reliable Exam Book

We will provide you with three different versions of our ACD201 exam questions on our test platform. You have the opportunity to download the three different versions from our test platform. The three different versions of our ACD201 Test Torrent include the

PDF version, the software version and the online version. The three different versions will offer you same questions and answers, but they have different functions.

Appian Senior Developer Sample Questions (Q42-Q47):

NEW QUESTION # 42

Your client reported that a form in the application is very slow to load.

You investigate and find a query entity which is not performing well.

Which action should you perform to improve query performance for the query entity?

- A. Apply indices on all the fields referred in the query.
- B. Change the data source of the query entity to a view with a WHERE clause.
- C. Apply the appropriate filters and indices in both Appian and the database.

Answer: C

Explanation:

Applying appropriate filters and indices in both Appian and the database ensures that only relevant data is retrieved and the database query runs efficiently, improving overall query performance.

NEW QUESTION # 43

You're creating an interface to display all the employees of a company on a staff list.

You decide to use `a!gridField()` to create a user grid to display information from the company's `AAA_Employee` record, which has 42 fields relating to various employee information. To avoid cluttering the grid, you want to show six (6) fields on the grid.

How should you optimize the interface?

- A. Using a local variable, query the `AAA_Employee` record using `a!queryRecordType()`, without defining the six (6) fields you require to show in the "fields" parameter to be used in the data parameter of `a!gridField()`.
- B. Call the function `a!forEach()` in a local variable and query the `AAA_Employee` for each employee separately by using `a!queryRecordType()` to loop through all employees as defined by a constant to be used in the data parameter of `a!gridField()`.
- C. Query the `AAA_Employee` record using `a!queryRecordType()`, defining the six (6) fields you require to show in the "fields" parameter to be used in the data parameter of `a!gridField()`.

Answer: C

Explanation:

Querying the `AAA_Employee` record with `a!queryRecordType()`, specifying only the six fields needed in the fields parameter, optimizes data retrieval and improves grid performance by minimizing unnecessary data loading.

NEW QUESTION # 44

You're reviewing the data store performance logs. You notice several items were logged in the generated slow query log file: `perf_monitor_rdbms_slow.csv`.

What is the default threshold value for a slow query to be included in this log file?

- A. 7 sec
- B. 3 sec
- C. 5 sec

Answer: B

Explanation:

The default threshold value for a slow query to be included in the `perf_monitor_rdbms_slow.csv` log file is 3 seconds.

NEW QUESTION # 45

You need to connect to an external system using OAuth 2.0: SAML Bearer Assertion Flow authentication type, which requests

access to an API on behalf of a signed in user.

This standard has the several steps involved with the SAML Bearer Assertion Flow.

Which two steps should you perform? (Choose two.)

- A. Create a Bearer Assertion process flow to authenticate the user.
- B. Enable the checkbox labeled OAuth 2.0: SAML Bearer Assertion Flow in the Admin Console.
- C. Add required users and groups to OAuth 2.0 SAML Bearer Assertion Users system group.
- D. Upload Client Certificate to Connected System.

Answer: C,D

Explanation:

Adding required users and groups to the OAuth 2.0 SAML Bearer Assertion Users system group ensures only authorized users can initiate the authentication flow.

Uploading a client certificate to the Connected System is needed for the assertion and secure communication required by the SAML Bearer Assertion Flow.

NEW QUESTION # 46

A recent Health Check report of your application indicates an increased risk of large context size in the interfaces.

What are two possible contributors to this risk? (Choose two.)

- A. The load variable has a web service response as JSON.
- B. Data transformation is performed inside the interface rather than delegated to the source system.
- C. Local variables are set to refresh every five minutes.
- D. Multiple local variables hold duplicate data.

Answer: B,D

Explanation:

Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk.

Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

NEW QUESTION # 47

.....

Customizable Appian Senior Developer (ACD201) practice exams allow you to adjust the time and Appian ACD201 questions numbers according to your practice needs. Scenarios of our ACD201 Practice Tests are similar to the actual ACD201 exam. You feel like sitting in the real ACD201 exam while taking these ACD201 practice exams.
