1 / 5

There are many ways to help you prepare for your Appian ACD201 exam. RealVCE provide a reliable training tools to help you prepare for your Appian ACD201 exam certification. The RealVCE Appian ACD201 Exam Materials are including test questions and answers. Our materials are very good software that through the practice test. Our materials will meet all of the IT certifications.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 2	Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 3	Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

Topic 4	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

ACD201 Exam Practice, ACD201 Exam Score

All these three Appian ACD201 practice exam formats provide a user-friendly interface to users. The Appian ACD201 PDF questions file is very installed on any device and operating system. After the quick Appian ACD201 PdfDumps file installation you can run this file anywhere and anytime and start ACD201 exam preparation.

Appian Senior Developer Sample Questions (Q96-Q101):

NEW QUESTION # 96

There are two record types, ABC and XYZ, with sync enabled. The XYZ record type is added as a relationship into the ABC record type.

A user has Viewer permission to the ABC record type but does not have access to the XYZ record type.

A site page is presented to the user where the data is sourced from the ABC record type and its related record type the XYZ reference.

What information does the user see on the site page?

- A. Page is presented to the user with the XYZ record type data and fields references redacted.
- B. Page is presented to the user and the data references to the XYZ record type appear as "null".
- C. Page does not load and an error message is presented: "The record type [identifier=XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."

Answer: C

Explanation:

Because the interface references fields on the XYZ record type, the user must have at least Viewer permission on XYZ as well as on ABC. Since the user lacks access to XYZ, the query cannot be executed and the page fails to load, displaying the error:

"The record type [identifier = XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."

NEW QUESTION # 97

You need to relate two entities, Employee and Skill, in the data structure. You want to adhere to Appian best practices.

Employees can have multiple skills, and a single skill can relate to multiple employees.

What type of relationship do these entities represent, and what is the minimum number of tables required to implement the design?

- A. Many-to-many; 3 tables
- B. Many-to-many; 2 tables
- C. One-to-many; 2 tables

Answer: A

Explanation:

The relationship between Employee and Skill is many-to-many - an employee can have multiple skills, and each skill can belong to multiple employees.

To model this properly and according to Appian best practices, you need 3 tables:

Employee table

realvce.com

appian

Skill table

realvce.com

appian

EmployeeSkill (junction/association) table - contains foreign keys referencing both Employee and Skill to manage the many-to-many relationship.

appian

NEW QUESTION # 98

The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to-one record relationship between the id and parentTaskId called parentTask.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.
- B. Use a!queryRecordType() filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.
- C. Use a!queryRecordType() With a filter on the task id, with fields specified to return recordType!Task.name and recordType!Task.parentTask.name.

Answer: C

Explanation:

A single a!queryRecordType() call filtered by the task's id and selecting both recordType!Task.name and recordType!Task.parentTask.name leverages the existing self-referential relationship, returning the task name and its parent's name in one efficient query without additional custom fields or extra queries.

NEW QUESTION # 99

You're building an application with a review workflow.

Each submission must be approved by three users who can each approve or reject their request, and leave a comment. This action changes the status of the submission to 'Approved' or 'Rejected' correspondingly, and pushes the review to the previous or next assignee.

Which data model captures the workflow requirements appropriately?

- A. Two tables:
Review with columns id, statusId, comment, user1, user2, user3
RefStatus with columns id, value
- B. Three tables:
Review to store id, statusId, comment
RefStatus with columns id, value

Review User with columns id, reviewId, user

- C. Two tables:
Review with columns id, statusId, comment, user
RefStatus with columns id, value

Answer: B

Explanation:

Using three tables - Review, RefStatus, and Review User - enables you to track each user's approval or rejection, comments, and status changes for each review, supporting a flexible, normalized workflow for multiple reviewers.

NEW QUESTION # 100

Your client reported that a form in the application is very slow to load.

You investigate and find a query entity which is not performing well.

Which action should you perform to improve query performance for the query entity?

- A. Apply the appropriate filters and indices in both Appian and the database.
- B. Change the data source of the query entity to a view with a WHERE clause.
- C. Apply indices on all the fields referred in the query.

Answer: A

Explanation:

Applying appropriate filters and indices in both Appian and the database ensures that only relevant data is retrieved and the database query runs efficiently, improving overall query performance.

NEW QUESTION # 101

.....

Our company aimed to provide you with professional team, high quality service and reasonable price on our ACD201 exam questions. In order to help most customers solve their problems, our company always insist on putting them first and providing valued service on our ACD201 training braindump. It has helped so many candidates passed their ACD201 exam. We deeply believe that the ACD201 test torrent of our company will help you pass the ACD201 exam and get your certification successfully in a short time too.
