

ACD201 Practice Test Online | Updated ACD201 Demo

ACD201

Option C : Create a custom plug-in that can write an audit trail to a log file.

Correct Answer: B

QUESTION: 6

You are code-checking your colleague's process model before marking it as Ready for Deployment. Which three best practices should be applied? (Choose three.)

Option A : All nodes should have exception flows

Option B : All XOR/OR gateways should have a single incoming ow.

Option C : All outgoing flows from a gateway should be labeled

Option D : Node inputs should not make the same query call more than once.

Option E : Activity chaining should be added to the majority of flows.

Correct Answer: B,C,D

QUESTION: 7

During a sprint retrospective meeting, you need to get the team thinking about the outcomes of the last sprint. Which two basic questions should you ask? (Choose two.)

Option A : What didn't go well and can be improved?

Option B : What are the blockers?

Option C : Who did well in this sprint?

Option D : What went well?

Correct Answer: A,D

If you are preparing for the Appian Senior Developer (ACD201) exam dumps our ACD201 Questions help you to get high scores in your Appian ACD201 exam. Test your knowledge of the Appian Senior Developer exam dumps with ExamsLabs Appian ACD201 Practice Questions. The software is designed to help with ACD201 exam dumps preparation.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

Topic 2	Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 3	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 4	Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

Stay Updated with the Latest Online Practice Appian ACD201 Test Engine

Getting an authoritative IT certification will make a great difference to your career like ACD201 exam tests. The difficulty and profession of real questions need much time and energy to prepare, which can be solved by our ACD201 dumps torrent. The latest training materials are tested by IT experts and certified trainers who studied ACD201 Exam Questions for many years. The high quality of our vce braindumps are the guarantee of high passing score.

Appian Senior Developer Sample Questions (Q92-Q97):

NEW QUESTION # 92

You're creating a synced record type which will store read-only data from an external web service. Data in the external system is updated nightly, and the latest information must be available to users in the morning.

Currently there are approximately 150,000 entries in the external system, and this number is not expected to change significantly. There is an existing integration object and associated expression rule, which when called returns the complete dataset from the external system.

What are two configurations that you must apply to ensure that the latest and complete record set is available?
(Choose two.)

- A. Modify the integration object and associated expression rule to return batches of 1000 based on a batch number passed in from the record type.
- B. Set all record fields to evaluate in real-time so that the latest information is always retrieved from the web service.
- C. Within the record type, schedule a full sync to occur nightly after the data is refreshed in the external system.
- D. Within the Source Filters settings on the record type, disable the row limit option so that all entries can be retrieved from the external system.

Answer: C,D

Explanation:

Scheduling a nightly full sync ensures the record type is updated with the latest data after the external system refreshes.

Disabling the row limit in Source Filters allows the complete dataset to be retrieved and synced, ensuring all entries are available.

NEW QUESTION # 93

You're refining a story regarding a highly regulated form, where information needs to be sent to a regulatory body at the end of each month to ensure that the business complies with laws and legislation. The story only concerns the creation of the form.

You need to create a form that captures information to comply with the regulatory requirements.

Which two questions should you ask the business? (Choose two.)

- A. What is the maximum length of each field?
- B. Is the information sent to the regulatory body via an integration?
- C. How often is the information sent to the regulatory body?
- D. What information does the regulatory body require?

Answer: A,D

Explanation:

Knowing what information the regulatory body requires ensures the form captures all necessary data for compliance.

Understanding the maximum length of each field guarantees that the data collected will meet validation and regulatory constraints.

NEW QUESTION # 94

You need to write an expression to retrieve a list of all account managers who don't currently have an active customer account.

Which code snippet should you use?

- A.

```
a!localVariables(  
  local!customers: {  
    rule!getAllDomesticCustomers(),  
    rule!getAllInternationalCustomers()  
  },  
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(  
    regions: rule!getAllRegions(),  
    verticals: rule!getAllVerticals()  
  ),  
  local!AMsWithoutAccounts: difference(local!accountManagers, local!customers.manager),  
  a!forEach(  
    items: local!AMsWithoutAccounts,  
    expression: rule!displayUserName(fv!item)  
  )  
)
```

- B.

```
a!localVariables(  
  local!domesticCustomers: rule!getAllDomesticCustomers(),  
  local!internationalCustomers: rule!getAllInternationalCustomers(),  
  local!customers: a!flatten(  
    {  
      local!domesticCustomers,  
      local!internationalCustomers  
    }  
  ),  
  local!customerManagers: index(local!customers, "manager", null),  
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(  
    regions: rule!getAllRegions(),  
    verticals: rule!getAllVerticals()  
  ),  
  local!AMsWithoutAccounts: reject(  
    fn!isNull,  
    a!forEach(  
      items: local!accountManagers,  
      expression: if(  
        contains(local!customerManagers, fv!item),  
        null,  
        fv!item  
      )  
    )  
  ),  
  a!forEach(  
    items: local!AMsWithoutAccounts,  
    expression: rule!displayUserName(fv!item)  
  )  
)
```

- C.

```

a!localVariables(
  local!domesticCustomers: rule!getAllDomesticCustomers(),
  local!internationalCustomers: rule!getAllInternationalCustomers(),
  local!customers: a!flatten({local!domesticCustomers,local!internationalCustomers}),
  local!customerManagers: index(local!customers,"manager",null),
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(
    regions: rule!getAllRegions(),
    verticals: rule!getAllVerticals()
  ),
  local!AMsWithoutAccounts: difference(local!accountManagers, local!customerManagers),
  a!forEach(
    items: local!AMsWithoutAccounts,
    expression: rule!displayUserName(fv!item)
  )
)

```

Answer: A

Explanation:

Chosen snippet uses the difference() function to efficiently get all account managers who are not currently managers of any customer account. It directly compares local!accountManagers to local!customers.manager, resulting in a concise and optimal solution for retrieving account managers without an active customer account.

NEW QUESTION # 95

What should you use to create a predefined query in a database for ease of use?

- A. View
- B. Expression Rule
- C. Stored Procedure

Answer: A

Explanation:

A database view is used to create a predefined query, making it easy to access, reuse, and join data for applications like Appian.

NEW QUESTION # 96

You're developing a user input form for a financial services application.

One component of this form requires you to embed an external site (in the form of a URL) that can receive inputs from Appian and return updates as the user interacts with it.

What should you do?

- A. Use a component plug-in to achieve interaction with the embedded site, because this use case requires input-output or event parameters.
- B. Use an integration to achieve interaction with the embedded site while displaying information in the Appian out-of-the-box Web Content Component. That way you can refresh for updates and interact with the site.
- C. Use the Appian out-of-the-box Web Content Component. It can display content from a URL and provide both additional inputs, or receive updates as the user interacts with the embedded site.

Answer: A

Explanation:

A component plug-in is required because the standard Web Content Component in Appian only displays external sites and does not support direct two-way interaction or input/output event handling. A plug-in enables custom integration to allow input and receive updates as users interact with the embedded site.

NEW QUESTION # 97

.....

After buying the Appian ACD201 practice material, ExamsLabs offers a full refund guarantee in case of unsatisfactory Appian ACD201 test results which are highly unlikely. We also offer a free demo version of the Appian ACD201 exam prep material.
