Updated ACD201 Reliable Test Prep - Find Shortcut to Pass ACD201 Exam

Test4Sure recognizes the acute stress the aspirants undergo to get trustworthy and authentic Appian Senior Developer (ACD201) exam study material. They carry undue pressure with the very mention of appearing in the Appian ACD201 certification test. Here the Test4Sure come forward to prevent them from stressful experiences by providing excellent and top-rated Appian Senior Developer (ACD201) practice test questions to help them hold the Appian Senior Developer (ACD201) certificate with pride and honor.

Appian Senior Developer Sample Questions (Q57-Q62):

NEW QUESTION # 57

You need to configure Appian user authentication against an external directory server. The requirement is to use the same corporate logon information without single sign-on (SSO).

Which authentication type should you use?

- A. OpenID Connect authentication
- B. PIEE user authentication
- C. LDAP authentication

Answer: C

Explanation:

LDAP authentication allows users to log in with their corporate credentials by authenticating against an external directory server, without requiring single sign-on (SSO).

NEW QUESTION # 58

You need to connect to an external system using OAuth 2.0: SAML Bearer Assertion Flow authentication type, which requests access to an API on behalf of a signed in user.

This standard has the several steps involved with the SAML Bearer Assertion Flow.

Which two steps should you perform? (Choose two.)

- A. Upload Client Certificate to Connected System.
- B. Create a Bearer Assertion process flow to authenticate the user.
- C. Enable the checkbox labeled OAuth 2.0: SAML Bearer Assertion Flow in the Admin Console.
- D. Add required users and groups to OAuth 2.0 SAML Bearer Assertion Users system group.

Answer: A,D

Explanation:

Adding required users and groups to the OAuth 2.0 SAML Bearer Assertion Users system group ensures only authorized users can initiate the authentication flow.

Uploading a client certificate to the Connected System is needed for the assertion and secure communication required by the SAML Bearer Assertion Flow.

NEW QUESTION # 59

Match each authentication type to the correct authentication characteristic description.

Note: Each description will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

LDAP Authentication

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

Basic

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

OpenID Connect (OIDC)

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

SAML Authentication

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

Answer:

Explanation:

LDAP Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

Basic
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

OpenID Connect (OIDC)
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

SAML Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

LDAP Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO)

Basic
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO)

OpenID Connect (OIDC)
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO)

SAML Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO)

NEW QUESTION # 60

An application consists of a record type with sync enabled. This record type is used as a source to create a read-only grid. A field "Number of days since created" is configured in the interface and a logic is implemented to calculate the number of days since a record is created in the application. You need to implement sorting on this field. What should you do?

- A. Sorting is not possible on custom record type fields. Instead, create a view with a custom field and use the field from the view for sorting.
- **B. Create a custom record type field and use it in the sorting configuration.**
- C. Add sortField: "Number of days since created" configuration for the gridColumn that needs to be sorted.

Answer: B

Explanation:

Creating a custom record type field to calculate "Number of days since created" allows you to use this field in the sorting configuration of your read-only grid.

NEW QUESTION # 61

You're designing a process used to notify multiple users of marketing campaigns. These campaigns occur infrequently, but are sent out to the hundreds of customers that are stored in your app.

How should you best design your process model to send the emails whilst using a common email process model (CMN_SendEmail), to be most performant?

The outputs of this node are not required for the main process.

- A. Set "CMN_SendEmail" as a "Start Process" process node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.
- B. Set "CMN-SendEmail" as a synchronous "Subprocess" node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.
- C. Set "CMN_SendEmail" as an asynchronous "Subprocess" node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.

Answer: A

Explanation:

Using "Start Process" as the node type and enabling "Automatically run multiple instances of this node" for all users on the mailing list launches each email as a separate, lightweight process, maximizing performance and scalability, especially since the main process does not require the outputs.

NEW QUESTION # 62

.....

If you are not aware of your problem, please take a good look at the friends around you! Now getting an international ACD201 certificate has become a trend. If you do not hurry to seize the opportunity, you will be far behind others! Now the time cost is so high, choosing ACD201 Exam Prep will be your most efficient choice. You can pass the ACD201 exam in the shortest possible time to improve your strength.
